JOSEPH DIXON CRUCIBLE CO., JERSEY CITY, N. J.

**ONLY \$12.75. SEND NO MONEY**

if you live within 500 miles of Chicago, (if further send \$1.00), cut out and return this ad. Mention No. 811, and we will send you this **HANDSOME ROLL TOP DESK** by freight, C. O. D., subject to examination. You can examine it at your nearest railroad station, and if found perfectly satisfactory and exactly as represented, the greatest value you ever saw or heard of, the equal of desks that others sell at almost double the price, then pay the railroad agent **OUR SPECIAL OFFER, \$12.75** and freight charges. The desk weighs about 180 pounds, and the freight for each 100 miles will be about 50 cents; 500 miles, about \$1.50. **THIS DESK** is 4 ft. 2 in. long, 2 ft. 6 in. wide, 3 ft. 8 in. high. Made of carefully selected oak, beautifully finished in antique, full finished back, extension slides, quartersawn sycamore pigeonhole case, combination lock on drawers, spring lock with duplicate keys on curtain, 3 drawers on left side, lower partition for books, book closet on right hand side, drawers, pencil rests and card racks in interior, desk hand polished, dust proof curtains. **THESE DESKS** are made for us under contract by one of the largest and best desk makers in this country. Every desk is put out under the manufacturer's **BINDING GUARANTEE**, and our special \$12.75 price barely covers the cost of material and labor, with but our one small percentage of profit added. # CHATILLON SPRING SCALES.

OUR attention having been called to the fact that inferior makes of Spring Scales are being sold to butchers as "Chatillon" Scales, we deem it due to the trade and to ourselves, in order to protect the merits of our Spring Scales, so well and favorably known for more than sixty years, to inform you that every Spring Scale manufactured by us

has our name as makers plainly on the dial, thus:

and any scale without this name on the dial is NOT A GENUINE CHATILLON SCALE.

## FOSTER BROS.' BUTCHER KNIVES, CLEAVERS, STEELS, ETC.

These Tools are recognized in the Markets, Packing Houses and Abattoirs throughout the United States as the standard of excellence, quality being the first consideration. We carry in stock every style and size of Knives, Cleavers and Steels used in cutting meat; also Knives for kitchen use in Hotels, Restaurants and for domestic purposes.

## FRIEDERICH DICK'S MAGNET DIAMOND STEELS.

By careful workmanship and the use of a special steel in their manufacture THEY HAVE BECOME FAMOUS THROUGHOUT THE WORLD.

# Stevens' Sprayers

Patented January 29, 1901.

Best Construction. Finest Finish, Packed in Most Convenient Form. Our Prices are Right. We furnish the best goods made and meet all competition. Write us for prices. Send sample order. We also make a special small Sprayer in both Brass and Tin, for household use. Ladies like the small size, for roses, houseplants, etc.

**STEVENS & CO., 99 Chambers Street, New York City.**

None but a fool believes all he hears or reads. We say our No. 1900 Champagne Tap does not leak and we mean it too, but as we do not take you for a fool we do not expect you to believe our statement till you have proved it by testing the Tap.

This view shows the Seat and Direct Cut-off.

A Tap without a Direct Cut-Off isn't worth a sou marquee.

Order a sample dozen—Order one and test it, then you'll believe, not because we say so, but because your test proved No. 1900 absolutely proof against leakage. This Tap retails readily for one dollar and yields you a good profit.

**C. T. Williamson Wire Novelty Co.**  
369A MULBERRY ST., NEWARK, N. J.

# L. COES'

Its Corporate Mark

Is among the oldest, and now over **200 YEARS** old. It is known the world over as a guarantee that all articles so stamped are absolutely superior to all others.

We are the sole agents in the United States for JOSEPH RODGERS & SONS and carry a full line of their manufactures in stock.

If you cannot procure goods of their make from your jobber we shall be pleased to supply full information on application.

**ALFRED FIELD & CO.,  
93 Chambers Street, New York.**

**WHY IS THE**

**O.K. THE BEST ROTARY  
WASHING MACHINE?**

**—BECAUSE—**

- 1.—It is the only Rotary washer that has Revolving Steel Ball Gearing, reducing the friction and thus making machine so light running and almost noiseless.
- 2.—The tub is made of Louisiana Red Cypress Lumber, cherry finish; the legs are solid with tub (not removable, breakable legs fastened with screws).
- 3.—The wheel turns right or left, pin wheel or dasher reverses automatically, turning the clothes back and forth through the hot soap-suds, and cleaning them without rubbing them to pieces.
- 4.—This washer is made by experienced mechanics, and will out-last any other washer on the market.
- 5.—The tub has a wringer box fastened with steel brackets.
- 6.—The lid on tub closes tight, no escape of steam.

Manufactured by **H. F. BRAMMER MFG. CO.,  
DAVENPORT, IOWA.**

**TRIMO PIPE CUTTER**

Decided improvement. Less friction. Can be changed from a roller to a three-wheel cutter. Extra wheels in the handle. Send for catalog.  
**TRIMONT MFG. CO., Roxbury, Mass., U.S.A.**

**Benefits Greater Than Ever  
Before.**

Nicholson File Co., Providence, R. I., [Files]: We are pleased to state that the results thus far obtained from our advertisement in the columns of *Hardware* fully justify our having resumed our contract with you. We feel that the benefits which we are securing from your paper are greater than ever before.

# Sell the Gem.

IT IS a kitchen necessity and every housekeeper in your section will be glad to purchase one if you call her attention to it. It is the best Food Chopper made and you can guarantee it. We furnish selling helps—booklets, folders, hangers and electrotyped advertisements, for use in local newspapers. Get a supply of this advertising matter and with a little systematic effort you can sell many Gems in your vicinity.

## Steel Cutters do not Break

—that's a point in favor of Sargent's Gem Food Chopper. It has four steel cutters for coarse, medium and fine chopping and for pulverizing. They chop in pieces of uniform size—do not mash, tear, squeeze or grind the various substances. The Gem is a well-built machine intended for kitchen use day in and day out.

## It is a Meat Chopper

and chops all kinds of meat, both raw and cooked, better than anything else ever made. It is useful in the preparation of all kinds of dishes—the substantial and the dainties. It chops quickly, quietly and easily; is easy to take apart, easy to put together, easy to adjust, self-cleaning. An economical article for the housekeeper to have.

## A Food Chopper, too,

that chops all kinds of vegetables, all kinds of fruit, crackers, bread, eggs, cheese, nuts, raisins—in fact everything that has to be chopped. It takes the place of chopping bowl and knife, and relieves the housekeeper of much work, saves time and is altogether a great kitchen convenience.

# MILLERS FALLS CO'S STAR SAWS.

## STAR HACK ★ SAW BLADES.—With 14 or 23 Points.

Length of Blade,	6	7	8	9	10	11	12
Price, per dozen,	55c.	60c.	65c.	70c.	85c.	95c.	\$1.05
Price, per gross,	\$6.00	7.20	7.80	8.40	10.20	11.40	12.60

The blades in the above list are our standard goods with 14 teeth to the inch. We also make the 8, 9, 10, 11 and 12 inch blades with 23 teeth to the inch, for cutting tubing and thin sheets of metal, the prices of each kind being the same. Both have a good set. In filling orders we shall always put in the coarse blades unless the fine ones are particularly named.

WITH 14 or 23 POINTS.—See note opposite.

### PATENT STAR ★ HACK SAW No. 2.

Solid frame, to hold 8 inch blades only, and face them in four directions. Polished and nickel-plated. Cocobola handle.

Price, per dozen, \$8.40.

No. 2.

### PATENT STAR ★ HACK SAW.

4A and 4B

This No. 4 is a Patent Cast Iron Frame and so constructed as to face blades in four different directions. The pins which hold the blade are fast in the frame and cannot drop out. It is a very stiff and desirable frame with japan finish.

No. 4 A, for 8-inch blades, per doz., \$3.00.

" 4 B, for 9-inch blades, " 3.00.

### PATENT STAR ★ HACK SAW No. 6.

This is the stiffest frame we make. It is highly polished, heavily nickel-plated, and will face the blades in four directions. The handle is cocobola. This No. 6 Frame will hold all blades from 6 to 12 inches.

Price of No. 6 Frame, per dozen, \$12.00.

No. 6.

### PATENT STAR ★ HACK SAW No. 9.

This frame holds blades from 8 to 12 inches in length. It is an extension frame covered by a steel sheath, as shown in the cut and has cocobola handles. The sheath makes it very stiff, and at the same time very light. It is polished and nickel-plated. The blades may be faced in either direction. Price, per dozen, \$12.00.

No. 9.

### PATENT STAR ★ HACK SAW No. 10.

We offer this as the best Extension Frame in market. It is light and quickly adjusted, having strength in the middle, where strength is needed. It is made of tempered steel, polished and nickel-plated. The handles are cocobola wood, highly finished. It carries blades 6-7-8-9-10-11 and 12 inches long.

Price, per dozen, \$12.00.

No. 10

### STAR BUTCHER SAW FRAME.

Prices of Frames Without Blades.

Inches,	14	16	18	20
Per dozen,	\$11.00	12.00	13.00	14.00
Inches,	22	24	26	
Per dozen,	\$15.00	16.00	17.00	

### STAR BUTCHER ★ SAW BLADES.

These blades are not intended to be filed, but to be thrown away when dull. The ordinary old-fashioned blade would need to be filed several times while doing same amount of work which a Star Blade will do before becoming dull. Use this blade and save filing expense. Can be furnished in either 1/2 or 3/8 inch width.

Length,	14	16	18	20	22	24	26 inches.
Price, per dozen,	\$1.08	1.08	1.20	1.20	1.32	1.32	1.44

STAR KITCHEN SAW.

### STAR KITCHEN SAW.

These steel frames are polished, with beech handles. They have what most other kitchen saws do not have: an arrangement for straining the saw, which adds much to their value.

Price of 14 inch frames, with one blade, per dozen, \$4.00.

Price of 14 inch blades, per dozen, \$1.08.

**Mr. Dealer**

WE INVITE YOU TO WRITE FOR OUR PRINTED MATTER, WHICH IS CONFIDENTIAL TO THE TRADE

We are putting this advertisement in the leading popular magazines to help you sell them.

**Something New**

PUT THIS ON YOUR PIPE,

The

Fowler

Automatic

Draft

Regulator

and you will notice the following about your furnace, stove, or boiler:

Regular Draft at all times.  
No overheating of furnace.  
Less chimney fire danger.  
No burning out of grates.  
No escaping gases in cellar or room.  
Perfect ventilation.  
Retention of heat in furnace.  
Perfect combustion of fuel.  
Minimum of clinkers.  
Therefore, greatest economy of fuel and care in operation.

Prevention of fires burning out on windy nights.  
A great coal and trouble saver.

Why? Because "The Fowler" Automatic Draft Regulator insures absolute and perfect regulation of draft under all conditions in any heating apparatus on which it is put.

Can be quickly applied even when heater is in use.

All stove dealers have them.

Send your address and that of your stove dealer on a postal. We are sure the reading matter we send you will be interesting.

Address:

**JOSEPH BATTLES,**  
SOLE AGENT,  
Box N, LAWRENCE, MASS.

NOTICE  
HERE.

**A HOT BLAST.**

THE "CHAMPION" is the only line of steel ranges equipped with the **HOT BLAST** combustion.

The **DOUBLE FLUE** gives the hot blast which is a principle of construction that operates our ranges with one-third less fuel than any other known make.

It means simply the use of space wasted to fill with sand in all other constructions.

Why not sell the range that has such advantages? It means friends for you.

Write to-day for Catalogue and price list.

# HARDWARE

The Hayes File Co., of Detroit, Mich., have bought all the machinery of the Crescent File and Tool Co., of Wilkesbarre, Pa.; also the machinery of the Diamond File Co., of Cleveland, Ohio, and several smaller plants. Although they bought a lot 125 x 52 feet, on which they erected last August a two-story brick factory, they now find it too small for their increasing business, and are having plans drawn for an addition to their building, which, when completed, and they have all their machinery installed, will give them a capacity of four hundred dozen files a day.

H. F. Brammer Mfg. Co., Davenport, Iowa, manufacturers of the O. K. Washing Machines, state that their orders are increasing steadily beyond all their previous anticipations. The many testimonials given them on account of the good merits of the O. K. would justify the use of an expression made in one of the letters that referred to the "Gilt Edge O. K. Washer." They have recently largely increased their facilities, and are prepared to ship orders promptly.

The Enterprise Foundry and Fence Co., Inc., have succeeded to the business of Ellis & Helfenberger, 366 South Senate Avenue, Indianapolis, Ind., and will continue the business under the same management and at the same old location. The new company announce that the high standard of work with which the name of the old firm has invariably been associated, will be steadfastly maintained, and they hope for a continuance of the patronage of the trade already established, assuring them that their favors will be faithfully attended to in a manner that will command their approval. William Helfenberger is President of the company, and George R. Ellis Secretary and Treasurer.

The next regular monthly meeting of the New England Hardware Dealers' Association will be held on the evening of Wednesday, April 10, at five o'clock, at the United States Hotel, Boston. The usual dinner will be served, immediately after which the business meeting will be held. The following speakers have been engaged for the occasion, who will address the members on topics of interest to the Association: Chas. E. Adams, of Lowell, President Massachusetts State Board of Trade, and William R. Chester, of Boston, Treasurer Massachusetts State Board of Trade. The Entertainment Committee consists of the following gentlemen William D. Parlin, Natick; S. D. Balkam, Jamaica Plain; Charles O. Tukey, Chelsea.

The National Association of Manufacturers will hold its sixth annual convention in Detroit, Mich., on June 4, 5 and 6. The detailed arrangements have not been completed as yet, on account of the Association's waiting for the Executive Committee to name the dates for holding the convention, but now this matter has been decided, active steps will be taken. Many inducements are offered the members of the Association to visit Detroit, among them an opportunity to visit the Pan-American Exposition at Buffalo during a single tour. Preliminary notices have been distributed to the members, and various details about convention arrangements, hotel accommodations, transportation and other essential particulars will be announced from time to time, as the work of providing for the accommodation of the convention progresses.

The Pittsburgh Stove and Range Co., Pittsburgh, Pa., will move on April 15th to their new offices and warerooms,

corner of Robinson and Darragh Streets, North Side. This location was formerly the Bissell plant, and in a leaflet, in which they announce the above fact, they state that to those who are not familiar with the location the best direction that can be given is "to look to the left when crossing the Sixth Street Bridge, and you will see the place," indicating the size of the plant is of sufficient importance. They state they have remodeled and enlarged the buildings to meet the requirements, and thus obviate the delay to which some orders have heretofore been subject. The booklet above referred to is very cleverly gotten up, and is happily entitled "A Move in the Right Direction."

The announcement of the incorporation of the old firm of Burditt & Williams, made in our issue of March 25th, should hardly have been placed in the column of "New Hardware Stores." This house enters upon its forty-first year at its old location, as the Burditt & Williams Co., the interests of the former partners being unchanged. It is known to the general trade of the country through its reputation as sole importers and agents of the Marty Rat and Mouse trap. Notwithstanding the competition here and there of imitations, this house reports the enjoyment of a larger trade than ever in this article, which has become standard in every Hardware stock.

The Manufacturers' Association of Kansas City, Mo., has established a catalogue library, and requests all manufacturers and mercantile establishments to forward their catalogues, receipt of which will be duly acknowledged. Catalogues will be filed and indexed by the card index system, both as to firm name and subject matter of the catalogue. The Association will maintain standing advertisements in all of the local papers announcing that the catalogue library is at the service of any one, and that inquiries by mail, which can be answered by reference to the catalogue library, will be promptly and freely replied to.

## To Avoid Freight Misunderstandings.

The manipulation of the freight allowance by shrewd salesmen has been the cause of many misunderstandings between wholesalers and retailers in the past. Gurney & Co., Boston, Mass., to prevent misunderstanding of the different terms by those who deal with them, print the following freight definitions. The company refer to the fact that invariably where the freight is allowed, it is added to the cost of the goods, and that a free freight is purely imaginary. The definitions are as follows:

*First.*—Our deliveries are made at the factory or warehouse.

*Second.*—"Freight allowance" means that we allow the amount of freight mentioned in the order.

*Third.*—"F.O.B." means free on board either cars or boats at shipping point.

*Fourth.*—"Freight allowed" means that we allow the full freight.

*Fifth.*—"Carload freight allowed" means that we allow carload rate on less than carloads.

*Sixth.*—"Delivered" means that we deliver f.o.b. at destination.

*Seventh.*—"Sidewalk delivery" means that we pay the freights and deliver the goods on the customer's sidewalk.

*Eighth.*—"Freight prepaid" means freight prepaid by shipper.

*Ninth.*—"Cartage" means the teaming of the goods from the warehouse or factory to the transportation company.

## Editorial Trade Review.

In every section of the country, as far as heard from, everything strengthens the prevailing belief that we will enjoy to the utmost a condition of prosperity resulting from good sales as far as quantity and profits are concerned, and a steady demand from labor conditions of the most promising kind. No political questions affect the happiness of the home-loving workman, who is less influenced by demagogic appeals during such a stage of contented employment at satisfactory rates of remuneration. No wars or rumors of wars mar the general commercial activity. Industrial opportunities are being explored and promoted in our new possessions: new fields for the employment of surplus capital discovered and exploited; many of the intelligent pioneers of trade will find an abundance of chances awaiting the prospector, and a trade will follow the flag in the near future that will mark a new inspiration and increasing hopefulness to every commercial ambition.

A growing scarcity already in many goods admonishes the dealer that his views when ordering the stock for Spring sales were of a character entirely too conservative. Orders from the jobbers for Wire Cloth, Poultry Netting, Window Screens and Screen Doors, Lawn Mowers and Refrigerators are being entered and shipped in such good-sized quantities that it has created a fear that supplementary specifications given manufacturers may be slow in materializing. The great number of stiffened quotations and more important advances in prices are affecting the buoyancy of the anxious buyer, whose stock in hand is rapidly diminishing under a heavy demand. The Builders' Hardware departments of the jobbing houses are enjoying an activity new to them under such favorable auspices; indications in every

section point to an unprecedented demand, unless it may be scotched by unexpected changes in prices of a pronounced upward tendency.

Another phase of operations might serve to act as a deterrent influence—that of labor troubles—which so frequently are generated and check a satisfactory industrial movement almost at its inception. It sometimes seems as though when the prosperity of the country can be firmly established in so many channels of labor by a continuance of prevailing conditions, just that moment is selected by the restless mechanic to choke a higher rate of wages out of the confident bosses.

In the agricultural districts many improvements are in contemplation by the prosperous farmers. Machinery of all kinds has been ordered, increasing the present facilities of the production of phenomenal crops. Extensive areas are being added to territory already occupied by productive farms, stimulated by the high prices obtainable for our cereals, in the world's markets, which annually approach nearer and nearer to our own shores by improving conditions of economical transportation.

Posthole Diggers and Fence Wire are in greater demand than ever, notwithstanding the activity noted a year ago in those important staples for farm improvement. Prices are favorable for a continued demand from the agriculturists, who are experiencing times when the "Farm Mortgage Company" can take a back seat and the cashier of the local bank lifts his hat to the contented farmer, who is his most solid depositor and asks no discounting privileges.

## Changes Affecting Foreign Exports.

The record of exportation of manufactures from the United States in the fiscal year, which ends ninety days hence, is not likely to equal that of the preceding fiscal year, for three quite apparent reasons: 1. The exporters engaged in commerce with the Hawaiian Islands are now refusing to furnish to the Bureau of Statistics the statements of their exports as in former years, holding that their exports are no longer "foreign commerce" and that therefore the Bureau has no authority to require the usual statements which the law authorizes with reference to commerce between the United States and foreign countries. 2. The exports to Porto Rico are now separately classified and no longer included in the general statement of foreign commerce. 3. The exports to China have temporarily fallen off one-half by reason of the unsettled conditions in that country.

The total exports to the Hawaiian Islands in the fiscal year 1900 were 13 1-2 million dollars, and to Porto Rico over 4 1-2 millions, a total of more than 18 million dollars. The shipments to Porto Rico in the present fiscal year show a large increase over last year, and presumably those to Hawaii have also increased; but as neither of these is included in the export figures of our foreign commerce, it is apparent that more than 20 million dollars of actual shipments from our ports in the fiscal year 1901 will not be included in the general statement of exports to foreign countries. When to this is added the further fact that the exports to China, which in the last fiscal year were over \$15,000,000 in value, have been temporarily cut down one-half, it is apparent that the year's figures of exports to foreign countries will not furnish a fair or just basis for comparison or for measurement of the general growth of our export trade.

The total exports for the 8 months ending with February, 1901, show an increase of more than \$95,000,000 over last year, but those of manufacturers alone show but a slight increase, and there is reason to believe that the recorded total of manufactures for the full fiscal year will, for the above stated reasons, fall somewhat below that of the preceding

year. This is due to the fact that a large proportion of our exports to Hawaii, Porto Rico and China are manufactures, and that the apparent reduction, for the reasons above explained, in the Hawaiian and Porto Rican figures and the real reduction in the exports to China by reason of temporary conditions, therefore relates almost exclusively to the class of exports designated as manufactures. Another condition which has a tendency to reduce the total value of exports of manufactures is found in the fact that prices of manufactured articles in many cases have fallen because of the reduction in the cost of the raw material from which they were produced, and that the exportation of an equal or even greater quantity supplies a smaller figure in the statement of values by which the export movement is necessarily measured.

It is quite probable, in view of the facts above outlined, that the record of exports of domestic manufactures in the fiscal year 1901 may show an apparent reduction, though the fact that more than \$20,000,000 worth of actual shipments from our ports, which were formerly counted as foreign commerce, no longer appear in these statements will account for the reduction, which will thus be more apparent than real.

### Musings on Individuality.

EDITOR HARDWARE: You and I are occasionally favored in knowing a man with a nature so great that the ordinary trials and buffets of existence hardly touch him and he lives a life serene and unruffled, guided by a single motive, and seemingly attaining his desires with no visible effort or discomposure. These are the men to whom we instinctively uncover and who are great in any station in life, and so rare that we can each write on the margin of this page the names of those we have known. Fortunately for mankind, this type is not limited to any one nation, but all lands have their citizens of this class whose influence is wider than any national boundary, and who are not limited in their operations by circumstances or surroundings.

We meet oftener—daily, in fact—another type of man; the tense, nervous, energetic individual so common that he has come to be accepted the world over as the typical American. He lives upon no serene heights but in an atmosphere of struggle in an effort to achieve ideals which seem farther and farther away as his ideas expand. His hope outstrips his successes, and while his body treads the path of to-day his eager spirit lives in the triumph of to-morrow when his plans shall have matured. Thus when each success comes he has already exhausted its virtues in anticipation and counts it as nothing in view of the greater one to which he is confidently looking forward. Ever looking for something better and seeking a larger field, his advancement is limited only by his natural powers and the nature of his surroundings.

Once in a while, this energetic citizen, either from a recoil of his overworked nerves or some rude awakening to the stern reality of his present circumstances, has a gray day, when the world seems out of joint and the aims that fire his daily action appear mean and trivial. These are the times when he is seized with an intense distaste for everything in his daily routine and he thinks that if he could only rid himself of the load he has so gladly assumed and shed even his own name and nature he would be fortunate. At such a time, he forgets that he has had other attacks just as severe and recovered from them, and until his old habit reasserts itself he is a prey to melancholy.

It is the man of this temperament who has the greatest ambition and the highest ideals who suffers the most in these periods of relapse, and to whom they do the most good. Then, if ever, when he is out of conceit with himself, he sees things from a new point of view and corrects his reckoning; and when the rebound comes, if he is made of the right stuff he is all the stronger for his unpleasant experience

and has a wider, clearer knowledge of events and his relation to them. Skies are bluer after a gray day, and mists and shadows vanish with the clouds.

Nature seeks an equilibrium in men's souls as well as in more material substance, and these gray days come to every person who seeks to raise himself above his present level. The man with a great nature does not have them, for his level is above the fluctuating forces that rule lesser men. The man who has no ambition and no hope never has them, for he has nothing to gain and nothing to fear; but you and I, my brother, know the days when the sky is as lead and the earth is as brass and life is bitter to the taste. We know also the joy of coming out of the dark mood as a man from a bath, refreshed and strengthened, taking up our tasks with a keener insight and a surer judgment and finding them altogether pleasant. It is good to have a hope for the morrow and to try to bring it true; it is good to work until mind and body are tired and rest is sweet, and if the over-wrought nerves and too eager ambition bring a temporary relapse, that, too, is good in its final results.

THE FACTORY PHILOSOPHER.

### The Late William G. Bridgeo.

We present herewith a portrait of William G. Bridgeo, whose death occurred February 8th, 1901. He was one of the oldest Hardware traveling men in New England, and one of the most highly respected. He was with the Dana Hardware Co., of Boston, for many years, and will be re-

WILLIAM G. BRIDGEO.

membered for his business ability by his associates and friends whose orders he was successful in taking for so many seasons. William G. Bridgeo commenced business with the firm of Rogers, Snelling & Co., of Boston, being employed as store clerk in the earlier years, and at a later period going on the road for that firm. He first associated himself with them about 1864, remaining until about 1868, or until the time when the firm went out of business. Subsequently he engaged with Stratton, Cory & Co., of Boston, and traveled with that firm until the fire of 1872. Succeeding the fire, the firm of Cory, Brooks & Co. was formed, and remained in business four years, Mr. Bridgeo being a member of the firm and continuing to travel over his regular territory notwithstanding that fact. He was subsequently in the employ of Eaton, Harrington & Dana, and remained with that firm and its successors until the time of his death. His absolute honesty and truthfulness under all circumstances gave him the universal respect of his customers and his competitors as well. His widow and son have the richest legacy possible for a man to leave.

## LEGAL CORRESPONDENCE.

Conducted by William Marston Seabury, Attorney and Counsellor at Law,  
No. 43 Cedar Street, New York.

Any subscriber to "HARDWARE" is privileged to ask any legal question he pleases in this Department and it will be answered free of charge. Address all communications to Editor "HARDWARE," No. 277 Broadway, New York City.

QUESTION.—I was run over by a wagon about two years ago. I was crossing a street near a corner and the wagon came around the corner at a high rate of speed. The owner of the wagon, who was in the wholesale business, sent me some money when I was in the hospital and afterward employed me in his store for about a year. A short time ago he discharged me without cause. I am subject to epileptic fits, which the doctor says were caused by the accident; this makes me unfit for work. Can I now sue the owner of the wagon, or have I now waited too long? Would the fact that I worked for this man for about a year after the accident offset my right to sue now?

REPLY.—You have a cause of action against the owner of the wagon, provided you can show that the owner or his servant did not exercise due care in driving the wagon and that you are injured through no fault of your own. If the accident occurred two years ago you may still bring suit. An action to recover damages for a personal injury resulting from negligence must in New York State be brought within three years from the time said action occurred. The fact that you became an employe of the owner of the wagon would not in any way affect your cause of action against him.

QUESTION.—Some time ago I sold my stock in trade for two hundred dollars. The stock was to be delivered within thirty days to the purchaser. Nothing was paid down by the purchaser and there was no written contract. Before the thirty days were up I wrote to the purchaser, stating that the goods were ready to be shipped to him. I received an answer from him, stating he had changed his mind about the goods and had decided not to take them. Witnesses were present when the agreement to purchase the goods was made. Cannot this contract be enforced and cannot I compel the purchaser to accept the goods and pay me the two hundred dollars for them, as he agreed to do?

REPLY.—The contract such as you describe cannot be enforced. The Statute of Frauds in this State provides (and the Statute of other States is generally similar) that every contract for the sale of any goods, wares, or merchandise, chattels or things in action, for the price of fifty dollars or more shall be void unless, first, a note or memorandum of such contract be made in writing and subscribed by the parties to be charged thereby, or second, unless the buyer shall accept or receive part of the goods, or third, unless the buyer shall at the time pay some part of the purchase price. Unless one of these requisites to a valid contract for the amount named was performed by the prospective purchaser the contract cannot be enforced.

QUESTION.—Kindly answer the following question through the columns of your paper. A owes B a thousand dollars, borrowed in 1886. In 1890 A failed and lost everything. He started in business again in his wife's (C) name. A continued to pay interest for several years but has not paid any except a very little at a time since 1895. First, can B collect from either A or C? Second, A wishes to settle the debt by paying B three hundred dollars a year on principal and canceling interest. How can this be done? Third, if A should give B new notes, would that make C liable for the amount?

REPLY.—First, if the debt is evidenced by A's promissory note the creditor can collect from him, provided the debt has been kept alive by part payments or the payment of interest within the statutory time, which in this State would be within the last six years; B could not collect the debt from C unless C was an endorsee of the note, or personally bound herself to pay the debt. Second, if B will agree to this proposition you could enter into an agreement in writing upon a new consideration whereby A agreed to pay B three hundred dollars a year in payment of the debt upon the cancellation of the original note; or, the parties could sign new

notes for the amount specified and cancel the old one. Third, C would not be liable on A's notes unless she endorsed them, and in New Jersey she would not be liable then if she was an accommodation endorsee and she did not derive the benefit of the loan.

QUESTION.—I have occupied my store in New York City for over a year past, always paying my rent on the first day of each month. I never had any written lease with the landlord, but the understanding was that I should remain as long as I wished provided I paid my rent monthly. My landlord agreed that he would not raise my rent as long as I remained. When I paid my last month's rent, however, my landlord informed me that thereafter my rent would be increased five dollars a month and that if I did not care to pay the increased rent he would enter into possession again the first of next month. Kindly inform me if I have any redress against this landlord?

REPLY.—Where the tenancy is a monthly one the landlord has the right to demand possession of his premises after a month's notice for any cause whatever. If, therefore, the landlord chooses to raise his rent it is optional with the tenant either to pay the rent or to leave the premises, and no redress can be had against the landlord.

## Great Diversity of Manufactured Products Exported.

Exports of iron and steel manufactures from the United States continue to increase. An analysis of the February export figures has just been completed by the Treasury Bureau of Statistics, and it shows that the total for the eight months ending with February, 1901, is six and a half millions in excess of the unparalleled figure of last year, and nearly three times the total for the 8 months ending with February, 1891, thus showing an increase of 10 per cent. in a single year and 333 per cent. in the decade. In the 8 months ending with February, 1891, iron and steel formed but 3 per cent. of the total domestic exports from the United States; in the 8 months just ended they form 8 per cent., being \$81,553,132, against \$75,053,768 in the corresponding months of the fiscal year 1900, and \$18,823,384 in the same months of 1891.

Not only is the total larger in the aggregate but it covers a greater diversity of products, thus showing that the manufacturers of the United States are not only increasing their output but each year fabricating a larger proportion of their product and thereby securing for themselves and the labor employed thereon a greater share of the profits accruing from such manufacture. A decade ago such articles as typewriters, bicycles, electrical machinery, cash registers, laundry machinery, pumps and pumping machinery, shoe machinery and other articles involving a high degree of manufacture had no place in the export schedules of the United States; now they constitute an important part of our annual exportations of iron and steel and are steadily increasing both in volume and in the number of foreign markets in which they find profitable sales. In 1891 no exports of electrical machinery were recorded, but by 1900 the figures for 8 months' transactions had reached about two and a half million dollars, and for the 8 months ending with February this year amounted to \$3,777,673, an increase of \$1,345,000 in a single year. Exports of steel rails increased from \$395,484 in the 8 months ending with February, 1891, to \$4,818,226 in the corresponding months of the fiscal year 1900 and \$6,889,079 in the same months of the fiscal year 1901. Exports of sewing machines have increased in value from \$1,877,992 in the 8 months ending with February, 1891, to \$2,902,139 in the same months of 1900, while the figures for this year are slightly below those of last year, being \$2,828,165. Exports of typewriters were not separately shown in 1891, but by 1901 the exports for 8 months had reached \$1,785,821, an increase of \$60,000 over the preceding year. Scales and balances have increased in export value over 50 per cent.

during the decade; locomotives over 200 per cent., printing presses over 300 per cent., and builders' Hardware over 300 per cent. Every item in the entire iron schedule shows a substantial increase in 1901 as compared with 1891, but in a few instances there are decreases as compared with 1900, presumably due to the advanced prices consequent upon the increased cost of material.

The area of distribution steadily and rapidly enlarges. In builders' Hardware, for instance, the exports now go not only to the principal countries of Europe but to Mexico, Central and South America and the West Indies, British East Indies, China, Japan, Australasia, Africa and the islands of Oceania. Sewing machines and typewriters find a market in the most distant islands, and the demand from the European and the other leading countries is increasing, while the demand for electrical machinery is growing in every direction.

The following table shows the exports of iron and steel manufactures in 8 months ending with February, 1901, compared with the 8 months ending February, 1891:

	Eight months ending— Feb., 1891. Dollars.	Feb., 1901. Dollars.
Total iron and steel.....	18,823,384	81,553,132
Steel rails .....	395,484	6,889,079
Builders' Hardware .....	1,353,848	6,058,126
Electric machinery .....	Not stated.	3,777,673
Billets, ingots, etc.....	24,014	3,067,372
Sewing machines .....	1,877,992	2,827,652
Locomotive engines .....	837,308	2,828,165
Steel bars .....	Not stated.	2,637,813
Structural iron and steel..	Not stated.	2,296,287
Wire .....	534,530	2,499,946
Typewriters .....	Not stated.	1,785,821
Pumps and pump mach'ry..	Not stated.	1,497,136
Wire nails .....	85,989	824,522
Printing presses .....	167,333	779,028
Firearms .....	640,664	686,530
Bar iron .....	74,244	594,696
Stoves and ranges .....	182,723	371,046
Scales and balances.....	212,656	358,892

### Hardware Club of New York.

The annual meeting of the Hardware Club of New York was held in the club rooms in the Postal Telegraph Building, Saturday, March 16, President George H. Sargent in the chair. The report of the secretary, James H. Kennedy, showed that the membership on March 1, 1901, was as follows: Resident members, 600; non-resident members, 137; on the waiting list, 4, the resident membership having reached the constitutional limit. The report of the treasurer, Thomas F. Keating, gave every evidence of the club being in good financial condition, notwithstanding unusual expenditures were made necessary during the past year. The election for governors resulted in the re-election of the following for a term of three years, succeeding themselves: Alfred D. Clinch, George J. Loughton, James D. Foot, Webster R. Walkley and Mortimer C. Ogden. Several minor amendments to the constitution and by-laws were also adopted by the same vote.

At a subsequent meeting of the board of governors, held on March 21, the following officers were unanimously elected for the coming year:

President, Edward C. Van Glahn.

Vice-President, Richard R. Williams.

Treasurer, Thomas F. Keating.

Secretary, Arthur G. Sherman.

George H. Sargent, who, for two years past, had so efficiently handled the gavel of presidential authority, was unanimously tendered a re-nomination for a third term, but conscientiously believing in rotation in office, and adverse to third terms in general, he declined a re-nomination. This action was followed by James H. Kennedy, who has for three years so ably executed the onerous and arduous duties pertaining to the office of secretary, who declined a re-nomination to this responsible position, thus making two vacancies to be filled as referred to above.

The new officers who succeed to these responsible positions have been identified with the organization since its inception. Edward C. Van Glahn, the newly-elected president of

the Hardware Club, and one of its charter members, was also distinguished as being one of the trustees named in the articles of incorporation. Having always officiated on the several important committees of the club, either as chairman or active member, he has from the beginning been exceedingly active in the performance of his respective duties, an earnest worker and a sound adviser. He is recognized as a man of untiring energy, fine executive ability, decision of character and faithful to his honest convictions in all matters, especially those referring to the interests of the club. He was honored two years ago by being chosen vice-presi-

EDWARD C. VAN GLAHN—President Hardware Club.

dent, and as a natural sequence to the laudable manner in which he filled that position, fully deserved his elevation to the high and honorable position of president of the club. He is the senior partner of the old Hardware house of White, Van Glahn & Co., 15 Chatham Square, a house which has been in existence as a Hardware store on the same site since 1812. He has been largely identified with the establishment of a branch retail Hardware store at 49 East Forty-second Street, near the Grand Central Depot, carrying a large and finely-assorted stock, Mr. Van Glahn being able to devote his time between the two stores. He is also secretary of the Hardware Dealers' Association of New York City, recently organized, and has long been a member of the Union League Club. Arthur G. Sherman, who was elected secretary, was also one of the original trustees, or governors, named in the articles of incorporation. He has ever since been actively interested as a member of important committees, thoroughly imbued with the responsibility attached to the conscientious fulfilment of his duties in the interest of the club. He is the Export Representative of a number of well-known manufacturers, his offices being located at 14 Warren Street.

Steel freight car building is a remarkable line of industry in this country just now. A single company at Pittsburgh is said to have about \$20,000,000 worth of orders now on its books. Several other concerns have taken up the construction of steel cars, including the Cambria Steel Company, Sterlingworth Railway Supply Company, Pullman Company and several railways.—*Exchange*.

### M. S. Benedict.

M. S. Benedict, head of the house of M. S. Benedict Mfg. Co., received his first business experience in the employ of the Howard Cutlery Co., of New York, with whom he remained fifteen years. Some four years before he left them, he started with E. R. Wallace, a jewelry jobbing house at Syracuse, known as Benedict & Wallace.

After eight years, during which time he parted company with the Howard Cutlery Co., Mr. Benedict bought out Mr. Wallace and changed the name of the firm to the M. S. Benedict Mfg. Co. and opened a Chicago branch. Since then the only change in the *personnel* of the house has been the admission of Mr. Benedict's son, H. L. Benedict, as partner.

Soon after Mr. Wallace dropped out, the general jewelry business was discontinued and attention was turned to silverware jobbing exclusively.

Six years ago, the town of East Syracuse made Mr. Benedict a proposition agreeing to furnish him a three-story

M. S. BENEDICT.

brick building, 100x150 feet, for manufacturing silverware, and provide a certain bonus if he would locate there and undertake to maintain for five years a weekly pay roll of not less than \$600; at the end of that time the building would be deeded to Mr. Benedict. The offer was accepted, and the factory was started at East Syracuse, though the jobbing business was still continued at Syracuse proper. At the end of three years the pay roll was doubled, and East Syracuse made another proposition: If he would move all of the Syracuse business to East Syracuse, and put up another building the size of the original, the town would deed the factory and ground to Mr. Benedict at once.

This offer, too, was accepted, and now they are putting down a foundation for another enlargement that will increase the size of the factory one-third and make one of the best equipped factories for manufacturing silverware in the trade. There are at present over 250 hands employed, complete stock is carried at the Chicago branch, as well as at East Syracuse, and a New York office is maintained at

409 Broadway. Twenty-four men represent the house on the road, two of them devoting their entire time and energy to the jobbing trade.

Mr. H. L. Benedict is permanently at Syracuse, looking after the company's interests there, while Mr. M. S. Benedict divides his time between Syracuse, Chicago and New York.

Last year Mr. Benedict, with Mr. F. H. Macfarlane, formed a partnership known as the Benedict-Macfarlane Co. and started the manufacture of silver-plated flat ware with a plant at Bridgeport, Conn., employing 150 men. The M. S. Benedict Mfg. Co. takes the entire product of this factory. Mr. Benedict's business has increased largely from year to year; the volume of sales was increased nearly one-third during the twelve months just past.

In the Chicago branch it was found necessary to take another whole floor above the existing quarters at 109-111 Wabash Avenue. The capacity of the factory has been much increased, not only by the added space noted, but by the recent purchase of machinery, the dies and molds of the Acme Silver Co., of Boston, who for twenty-five years manufactured a complete line of fine silverware, especially for the jewelry trade. This purchase enables the Benedict Manufacturing Co. to furnish the trade with an exceptionally fine line of new goods.

The story is one of uninterrupted success. M. S. Benedict was born in the town of Milton, Saratoga County, New York, and there most of his early youth was passed. His home now is at Syracuse, where he is a member of the Citizens' and Syracuse Clubs. He has one son, Harry L. Benedict, who makes his home in Syracuse. Mr. Benedict has considerable real estate in Syracuse, is a member of the Chamber of Commerce there, and a stockholder in two of the local banks. The success that has attended him in all of his ventures is perhaps sufficient testimony to his acumen and far-sightedness.

He has not only been successful in his thirty years of business life, but has as well won that larger success that is shown in the respect and esteem in which he is held by his fellows in the trade he has followed.

He is a man with friends everywhere.

### How Old Newspapers Have Become Valuable.

An insurmountable obstacle to the making of old newspapers into a good quality of paper was the fact that the printer's ink with its resin and its heavy linseed oil could not be got rid of by any known process. Paper was made of old newspapers, but it was poor in appearance, poor in quality, and always betrayed its origin. So old newspapers became in a certain sense mere waste until about six years ago, when a young man in New Jersey ciphered out the fact that the resin and the oil in old newspapers, when the whole mass of ink and paper fibre together was subjected to a very high temperature would be just the thing for sizing for box-board paper. He had no capital, and he had difficulty in interesting people who had, but he succeeded at last, and now he is a millionaire. He himself ships from his mills 5000 tons of boxboard paper—"news board," as it is called from its newspaper origin—to England alone in the course of every year, while he derives a large income from the royalties on his patents.—*Exchange*.

### Uses of Slag.

Slag accumulates at the rate of millions of tons a year, its bulk being three times that of the iron from which it is separated. While it has heretofore formed mountains of waste, it is now utilized for building roads, for making bricks, paving blocks, tiles and railway ballast. In great monoliths, weighing over three tons each, it has formed breakwaters. It has proved its value as material for paint, because of the 55 to 75 per cent. of pure oxide it contains. As mineral wool, resembling asbestos, it is an excellent non-conductor of heat, and is used by architects as a filling under mansard roofs.—*Exchange*.

## CONSULAR COMMERCIAL COMMENTS.

### SUBSTITUTE FOR RUBBER.

The department is in receipt of the following report from Consul Nelson, of Bergen, dated February 6, 1901, relative to the discovery of a cheap substitute for rubber:

"After having experimented for several years, a Copenhagen chemist has succeeded in producing a material called 'solicum,' which possesses qualities that will render it of the greatest importance to the caoutchouc industry. It is produced, it seems, from asphalt, and can be used for the manufacture of linoleum, rubbers, insulators, etc. It is also claimed that the material can be used as a paint, in all colors, and that it is absolutely waterproof.

### COMMERCIAL ATTACHES AT GERMAN CONSULATES.

Consul-General Guenther, of Frankfort, February 14, 1901, says that the *Official News for Commerce and Industry*, in a recent issue, notes the appointment of commercial experts as attaches to the German consulates at Buenos Ayres, Constantinople, New York, and St. Petersburg. This move, adds the consul-general, is significant as showing the efforts Germany is making to increase the efficiency of her consular service, and is but a part of her general scheme of developing most advantageously foreign markets for her exports.

### COMMERCIAL SHIPBUILDING.

Consul Sawter writes from Glauchau, February 12, 1901: "England still holds the first rank among the nations of the world in the building of commercial ships. It is shown in Lloyd's register of English and foreign shipping that from the shipbuilding yards of the United Kingdom 1,442,471 tons of ships were turned out last year, against 861,692 tons turned out by all the other nations combined. If war vessels are added, the respective amounts are 1,510,835 and 1,053,792. In the last three years, however, foreign countries have doubled their output, while England has only increased hers by 50 per cent. Among other nations, the United States last year built 358,557 tons; Germany, 260,751 tons, and France, 165,348 tons. Next came Italy, where, through State premiums, 67,522 tons left the stocks. Germany turned out the largest ship—the *Deutschland*, with 16,502 tons—while four other steamers had each a tonnage of over 10,000 tons. England built eight big ships, four of them being 12,000 tons each and the *Minnehaha* 13,403 tons. France is making no headway with steamers, but, in consequence of subsidies, her sailing fleet increases, whereas England no longer pays attention thereto."

### ACETYLENE GAS VS. PETROLEUM IN GERMANY.

Consul Hughes, of Coburg, under date of December 18, 1900, writes as follows:

"Up to the present time, Germany has imported each year from \$25,000,000 to \$30,000,000 worth of American petroleum. This industry, however, seems to be threatened somewhat by the introduction of acetylene as an illuminant, in a convenient and safe form, for house, store, and other uses. This has resulted from the low price at which calcium carbide is being produced here, and also from the rise in the cost of petroleum in the German markets."

### GERMAN INFORMATION OFFICE FOR FOREIGN COMMERCE.

I am informed that a commission of the German Board of Trade has considered the question of the establishment of an information office for foreign commerce. In some quarters, it is doubted whether such an institution can be of any real service, as it may compete with bureaus already existing. Its promoters urge that the United Kingdom, United States

and France having anticipated Germany in this respect, this country dare not long remain behind. The new organization is not to supersede, but to complete, the old one. To finance the affair, it is proposed that three thousand firms should each subscribe annually \$25; the commercial chambers, 2 per cent. of their receipts; from unions, from the Empire, from the city of Berlin, an approximate sum of \$50,000 is expected. The work of the information office would consist in furnishing information on laws and decrees relating to trade with foreign lands, duties on each single article, regulations as to certificates of origin, agents, commercial travelers, protection of patents, information as to means of transport, cost of freight to districts where goods are required, or from which goods may be obtained. It is especially urged that reliable information should be given as to the addresses of respectable foreign solicitors. It is also expected that the German consular corps will help the project in every way in their power.

OLIVER J. D. HUGHES, Consul.

Coburg, February 16, 1901.

### GERMAN WIRE NAIL TRUST.

Consul-General Guenther reports from Frankfort, February 19, 1901:

The *Frankfurter Zeitung* states that the wire nail trust, during the second half of 1900, sold 2,230,717.6 tons in Germany, and 1,952,469.5 tons to foreign countries. While the sales to the latter were only about 300,000 tons less than those made in Germany, a profit of \$280,270 was made on German sales, while the sales to foreign countries yielded a loss of \$204,627. The price of wire nails in Germany is fixed by the trust at \$2.70 per 100 pounds; for export, however, at only \$1.51 per 100 pounds. The German consumers have to pay an excessive price in order to enable the trust to sell its surplus to foreign countries at greatly reduced figures. And still the trust asks an increase of duties of 7 marks (\$1.67) per 220 pounds. The present tariff is 3 marks (71.4 cents) per 220 pounds.

### AMERICAN GOODS IN THE WORLD'S MARKETS.

The following, dated February 1, 1901, has been received from Consul-General Guenther, of Frankfort:

In a recent publication, the Frankfort Chamber of Commerce calls attention to the growing American competition in the markets of the world. It says:

The harbor authorities of Calcutta advertised for bids on locomotives. The lowest English bid was 30,880 marks (\$7349) for each locomotive, to be delivered within nine months; the lowest American bid was 25,200 marks (\$5998), delivery within six months. The American firm received the contract. The contract for furnishing a large quantity of cast-iron pipes for the Dutch Colonies was some time ago awarded to an American firm, which underbid German competitors nearly 25 per cent. Lately, large orders for rails were placed in America from Holland. Even the English Government is obliged to give Americans the preference over their own works on account of lower prices and quicker delivery, as in the construction of the Uganda bridges. American competition will be felt, especially in the Chinese market, after the cessation of hostilities. A number of new steamers are already being built for the trade between San Francisco and Japan and China.

A movement is on foot to establish a commercial museum at San Francisco after the pattern of that of Philadelphia. This will be of great service to American commerce with East Asia.

## THE PAN AMERICAN EXPOSITION, 1901.

### STADIUM FOR SPORTS.

Handsome recognition of the popular sports of the Western Hemisphere has been made by the Pan-American Exposition. The Stadium is the largest and most beautiful arena for sports ever erected in America. It covers a plot 678 1-2 by 450 1-2 feet, and has a quarter-mile track with a width of 20 feet, and ground area ample for the requirement of all the events contemplated. The seating capacity is 12,000.

The front of the Stadium is very imposing. The broad entrance is through a two-story building covering 170 by 52 feet of ground. The second story will be occupied as a restaurant. Staff, color and sculpture are employed with excellent effect. A field of flags and streamers fluttering from staffs on the roof complete a scene of rare beauty.

A space 220 by 22 feet under the seats at the south side will be devoted to exhibits. A similar space at the north side

the site selected for the Exposition, house and grounds were taken by the Exposition Company, and it was decided that the clubhouse would be well adapted for woman's headquarters during the Pan-American Exposition.

When the Exposition architects looked over the house with a view to enlarging and remodeling it, they were surprised at the possibilities of the pretty little building. Plans were drawn. Partitions were knocked out. New rooms were added, and when the clubhouse was completed it was an artistic triumph.

The situation on the grounds is ideal. The house faces the Elmwood Gate, one of the main entrances to the grounds. It is directly opposite the New York State Building, which occupies a commanding position in the broad, beautiful parklands, and is a permanent structure of white marble. To the south the Woman's Building faces the park lake, where a great electric fountain is to be one of the scenic

will be devoted to quarters for participants in the games, storage, etc.

The nature of the sports planned is varied. Amateur events of all kinds will be particularly encouraged as representing the most desirable of athletic competitions. There will be professional events as well. College sports will be made a feature, and inter-collegiate events are being planned. There will be amateur and professional baseball, football, lawn tennis, Marathon races, cross country runs, lacrosse, cycling, basket ball, roque, shooting, Caledonia games, gymnastics, military maneuvers, turning, cricket, bowling and other sports.

### WOMAN'S BUILDING.

One of the attractive buildings on the Exposition grounds is the tasteful, artistic structure to be occupied by the Board of Women Managers.

The house was formerly the home of the Country Club, and, as the club's property was in the most desirable part of

beauties of the fair. To the east, it faces the Exposition rose gardens, which are to be marvels of fragrance and loveliness.

### Pan-American Stamps to Commemorate the Exposition.

In a recent number of the official *Postal Guide* the third assistant postmaster-general gives notice that the Pan-American series of postage stamps will be ready for delivery to postmasters "the latter part of April." These stamps were ordered by the postmaster-general at the instance of the authorities of the Pan-American Exposition, to be held in Buffalo from May to November, 1901. These series will include six stamps, and these will be, according to the statement of Edwin C. Madden, the third assistant postmaster-general, "the most artistic series ever issued from the department." The denomination, subject, color, etc., of each stamp are officially described as follows:

Denom-ination.	Subject.	Color.	Legend.
1 cent.....	Lake steamer .....	Green.....	Fast lake naviga-tion.
2 cent.....	Railway train .....	Red.....	Fast express.
4 cent.....	Automobile .....	Red brown.....	Automobile.
5 cent.....	Steel arch bridge.....	Blue.....	Bridge at Niagara Falls.
8 cent.....	Ship canal locks.....	Lilac.....	Canal locks at Sault Ste. Marie.
10 cent.....	Ocean steamship.....	Light brown..	Fast ocean naviga-tion.

The stamps are of uniform dimensions, .76 by 1.06 of an inch, the longer side being horizontal. The borders take the colors of the regular series on the same denominations at this date. The words "Commemorative series, 1901," and "United States of America" next below appear above the vignette; the legend in a line next below the central opening, with the denomination in a line at the bottom, appears in the same order on all stamps of the series. All the lettering is in white Roman capitals. The numerals are all white-faced Arabic in the Roman type except the 10 cent, which is the block letter type of figure condensed to secure space for the two figures. The borders are well separated from the central

Mason and Dixon's Line.

The original running of Mason and Dixon's line was done according to the terms of the final agreement between the Calverts and Penns, concluded in 1760 after protracted negotiations. There was a conflict in the grants of Maryland and Pennsylvania. The Penns had friends at court and Calvert was finally coerced into conceding everything Penn demanded, and this concession cost him the richest portion of his domain. The line between Maryland and Pennsylvania was begun in 1760 by a commission appointed for that purpose. The proprietors of the two colonies became impatient at their slow progress and agreed to engage Charles Mason and James Dixon to complete the work. Both Penn and Calvert were in London at the time, and they there engaged these two men, whose names have become so famous in connection with this historic line, for so many years the dividing line between the free States and the slave States of the Union. While Mason and Dixon are inscribed as mathematicians and surveyors, or merely as surveyors, they were men of learning and of scientific attainments. Both

pictures, and the words of denomination at the bottom are preceded on the same line by the word "Postage." All the central illustrations are from photographs as the objects represented appear to-day, and are to be printed in black.

One cent—The lake steamer presents the port bow, the pilot house is well forward and it is propelled by side wheels.

Two cent—The train of four cars is drawn by a locomotive with four drivers; four parallel tracks are shown.

Four cent—The automobile is of the closed coach order, with two men on the box and a part of the United States Capitol at Washington as a background.

Five cent—This presents the largest single span steel bridge in the world; two trolley cars are seen upon it, and a full view of Niagara Falls is shown under, beyond and up the river, with the graceful springing arch as a frame.

Eight cent—The great ship canal locks at Sault Ste. Marie, Mich., are given in a view from a higher point, including the immediate surroundings.

Ten cent—An ocean steamship of the American Line, with two smokestacks and masts, presents its starboard bow lapped by a rising wave.

were elected members of the American Philosophical Society. Mr. Mason was at one time assistant at the Royal Observatory at Greenwich. Their work in America included, besides running the line between Maryland and Delaware and Pennsylvania, the measurement of a degree of longitude in Maryland. After returning to England Mason and Dixon were sent to the Cape of Good Hope to observe a transit of Venus. Dixon died in Durham, England, in 1777. Mason came to this country to live in Philadelphia and died there in 1787. The two surveyors arrived in Philadelphia November 15, 1764, and began their survey early in the following Spring. The most difficult part of the survey was in fixing the line of the circle around New Castle, Del., according to Lord Hardwicke's decision. They reported that this line as fixed by them would not pass "one inch to the eastward or westward of the points indicated by the colonial surveyors several years previously" and that "the sighting along poles and the rude chain measurements of 1761 and 1762 would have answered every purpose, had the proprietary so thought."

On January 4, 1766, the party had crossed North Mountain in Washington County and had reached the Little Al-

legany. There they quit work because of the fear of Indians. The French and Indian War was going on, but the surveying party had been protected by the escort of a body of friendly Indians of the Six Nations. When they reached a point 244 miles from the Delaware River and thirty-six miles short of the northwest corner of Maryland their Indian escort left them and they abandoned the work. It was completed many years afterward by other surveyors.

Mason and Dixon did their work with the utmost care. Through the forests they cut a "vista" eight feet wide and set up a stone at the end of each mile. Every fifth stone was larger than the others, and had on the north side the arms of Thomas and Richard Penn and on the south side the arms of Frederick Lord Baltimore. One of these is preserved in Baltimore by the Maryland Historical Society, and some yet stand in their original places and are cared for by the authorities. The intermediate stones are smaller and have the letter "P" on the north and "M" on the south face. These stones were not erected west of Sideling Hill, a ridge near the boundary between Washington and Allegany counties. They were hauled as far as the neighborhood of Fort Frederick, in Washington County, and it was found impossible to carry them further through the mountains. Some of these abandoned stones, it is said, still remain in the neighborhood where they were left, having been utilized in buildings. West of Sideling Hill the line was marked by piles of stone and earth.

The removal of many of the historical landmarks has left the boundary line between Maryland and Pennsylvania in doubt in places, and it is to remedy this, as well as to perpetuate the historic line, that the Legislature has provided for this resurvey.—*Baltimore Sun*.

### Sargent's Gem Food Chopper.

Of all the many specialties that have been invented to lighten the labor of the kitchen in connection with house-keeping contentment, there is but little doubt that Sargent's Gem Food Chopper holds a front seat. It is a machine intended for daily use in the kitchen. It is not a piece of mechanism so complicated as to require a technical education to understand it, but is as thoroughly understood fifteen minutes after it has been put in use as any article of equal utility that aspires for the attention of the public. There are few parts, so that it is virtually impossible to get out of

SARGENT'S GEM FOOD CHOPPER.

order. Then it is so easy to take apart; to put together; to adjust; to use and to clean, that the operation of doing all this is approached with pleasure instead of dread, and when it is realized how much less trouble it is to perform its perfect functions than it used to be to operate a mincing knife and a chopping bowl, it does not astonish the careful housekeeper to know how popular it has become. Then again, there are no knives to sharpen, the four steel cutters being made so that they sharpen themselves. And this is something that *pater familias* is only too glad to know.

These steel cutters form one of the principal features, and are peculiar to Sargent's Gem Food Chopper. They run no risk of breaking; they chop the food; do not tear, mash, squeeze or grind it, but by their perfect operation it is prepared in pieces of uniform size, either fine, coarse or medium, as desired, and one of them may be used even for pulverizing. They chop quickly, quietly and easily. When it is understood that there isn't an article of food a housekeeper wants to chop that cannot be chopped in Sargent's Gem Food Chopper, the path for making ready sales is already a convenient one. Sargent's Gem Food Chopper is as useful in every season of the year, as though it were a combination of excellences. In preparing the breakfast, dinner, luncheon or supper when once clamped to the kitchen table it is ready for use at any portion of the twenty-four hours. Among the articles that may be chopped by its convenient aid, the principal are raw meat, cooked meat, all kinds of vegetables, fruit, bread, crackers, cheese, nuts and many other articles used by the up-to-date housekeeper in making substantial dishes and dainty desserts. Frugal housekeepers who understand what it is to economize find this a very useful article to have around, because many attractive and appetizing dishes can be prepared from the "left overs," which would otherwise be wasted if it were not for the Gem. Sargent's Gem Food Chopper is made in three sizes. Four steel cutters are furnished with each size for chopping in the manner referred to above. The numbers of the several sizes of Gem Food Choppers are: No. 20, which is the size generally purchased for family use; No. 22, which stands higher from the table, and has a larger hopper, and No. 24, which is extra large and heavy. The two larger sizes are so constructed that if necessary a sausage stuffer can be attached. Each chopper is packed in a pasteboard box in order to be distributed by the retailer in a handy manner. Sargent & Co., New Haven, Conn., and 149 Leonard Street, New York, who are the manufacturers of this most salable house-keeping specialty, do everything possible to assist the dealer in making a wide distribution of an article of such great utility. They send a collection of advertisements already set up, and from which electrotypes have been made to make it easy for the dealer to advertise in his local paper the merits of the Gem Food Chopper. This is a feature that will be appreciated by the dealer wherever found, as there will be no necessity for making up any advertisements of his own, as they are gladly furnished, ready for insertion, by the manufacturers of the Chopper.

CLEVELAND STONE CO., Cleveland, Ohio, have recently issued a large-sized pamphlet catalogue of 54 pages, which it is safe to say is one of the handsomest that was ever devoted to so conventional a product and where so little of an artistic character can be shown in connection therewith. It is handsomely printed on superior coated paper, having superb half-tone page illustrations with others scattered throughout the text, giving views of the various quarries from which this company draw their supplies, every illustration given being a gem, not only showing the articles themselves that are displayed in this catalogue and price list, but also the methods of using the same, and the methods of manufacturing, every picture in it apparently forming an object lesson of its own. This company controls the output of 20 quarries. The various stages of the work connected with the working of them are admirably shown in the illustrations in this pamphlet, together with fine views of the grindstone works and frame factories at Berea, West View and other points of interest in connection with their production. A number of pages are devoted to their line of scythe stones, which are handsomely illustrated, showing the distinguishing points of difference between the various styles, together with such other portions of their product as axe-stones, shoemakers' sand-stones, etc., etc. This is a publication that reflects a great deal of credit on this old established company, and should be in possession of every one of our readers handling this description of goods. Among our New Goods and Specialties will be found a description of their new mounted grind-stone, the "Auto," which has been recently added to their already large line of these goods.

### Facts From the Census.

The more interesting complications of the Census Board are now beginning to appear. Take a recent bulletin—that pertaining to the area in square miles of States, Territories and Counties—for example. From it we learn that in water surface, bays, estuaries, seaways, lakes and rivers, Florida leads with 4440 square miles, while next in the order named is Minnesota with 4160 square miles, North Carolina with 3670 miles, Texas with 3490 miles, Louisiana with 3300 miles, Maine with 3145 miles, Utah with 2780 miles, California with 2380 miles, Maryland with 2350 miles, and Virginia with 2324 miles. Delaware has the smallest water surface, 90 square miles. Which State or Territory in the United States contains the largest county is a question that would stump the average man. But not for long, for reference to the census bulletin referred to would tell him that in Custer, Montana has a county of 20,490 square miles, which makes it larger than any of the following States: Maryland, Massachusetts, New Hampshire, New Jersey or Vermont. Add Vermont and New Hampshire together, and their area is less than that of Custer. Other large counties are San Bernardino in California, 19,947; Lincoln in Nevada, 19,437; Coconino in Arizona, 19,322; Nye in Nevada, 17,376; Choteau in Montana, 16,049, and Socorro in New Mexico, 15,386. The largest county in Texas is El Paso, with 9353. There are about twenty-five counties in the United States larger than El Paso. Rhode Island naturally has the smallest county—Bristol, with 25 square miles. Custer County is more than 819 times larger than Bristol. These census bulletins should find a welcome place in all schoolrooms throughout the United States, for from their pages may be gleaned many interesting facts not contained in text-books.

### An Improved Method of Filing Catalogues.

We learn from C. B. Carter, the efficient Secretary-Treasurer of the Southern Hardware Jobbers' Association, that during the attendance in Asheville, N. C., of the Executive Committee recently, they took pleasure in calling upon a number of Hardware dealers in that town, and in one of the stores, which is conducted and owned by Miss Penniman, under the firm name of Penniman Bros., they were very materially prepossessed in favor of a system which that Hardware-lady has adopted in her business. It so pleased the business-like members of the Executive Committee that they desired Secretary Carter should bring it before the membership of the Association as something worthy of their adoption. The system which has been adopted by Miss Penniman is an exceedingly simple and not an intricate one, but it forms a most excellent arrangement, and it is doubtful if any of the members of the Association are pursuing the same plan. It is a well-known fact that all experienced Hardwaremen have greater or less difficulty in keeping track of price lists and discount sheets that have reference to the various catalogues which they receive, and many a time they have been provoked beyond measure from inability to find a certain discount sheet when it was essential to have the information contained in

## Painting Activity.

There are only a few weeks before the busy painting season opens—the busiest in the history of this continent.

Are you ready to reap your share of the harvest?

Are you going to sell poor paint or good paint?

Are you going to work for the future or only for what you can make out of the present season? The dealers who handle

### The Sherwin-Williams Paint

will not only take the best advantage of the present prosperity and make a good profit, but by selling an entirely satisfactory paint will establish a big paint business for all the future.

It is not too late to get in line with S. W. P. Write us.

## THE SHERWIN-WILLIAMS CO.

PAINT AND VARNISH MAKERS,

KANSAS CITY.

it. Having experienced this difficulty herself, Miss Penniman has pasted an envelope on the inside of the front of each catalogue, of course pasting the writing side down, and the discount sheet is then folded and placed in the envelope. The catalogue is then fully prepared to be filed away for future reference. When it is found necessary to refer to the catalogue, and make use of the list and discount applying to any certain article, all that is necessary to be done is to turn to the front of the catalogue, turn back the flap of the envelope, which is there secured, take out the enclosures and all that you require is within reach. Sometimes an occasion arises where a customer desires a catalogue for examination. In such a case you do not wish him to see the price list or discount sheet, and it needs only a second to take the same out of the envelope and give him the book. It is a well-known fact that many jobbers merely paste discount sheets in the back of their catalogues, and when an occasion occurs to loan the book it will be necessary to either tear out those sheets, which would indicate to the customer that you were trying to keep information from him, or else permit it to be handled with that information unnecessarily within his reach; while if the envelope method had been used, there would have been no necessity for adverse criticism or want of confidence. This seems like a very feasible plan, and it would be good policy on the part of our readers to test this simple method of keeping such matters in systematic shape. We cannot do otherwise than commend the public-spirited manner in which Secretary Carter has seen fit to follow up methods that are so apt to be utilized when brought to the attention of those needing them.

“Miss Binks hasn’t a particle of social instinct.”

“What do you mean?”

“Why, when she is invited to lunch, she talks more than the girl who is to pay the bill.”—*Chicago Record*.

### Coldwell Lawn Mower Co.'s Specialties.

Among the numerous complete lines of Lawn Mowers that are offered to the attention of the Hardware trade of the country, it may well be believed the Coldwell line embraces the greatest variety, made by a single concern, in the world. They make no duplicates among their styles, which is frequently done in the distribution of a large line of similar appliances, that is to say: No one mower is similar to another in principle, with only a trifling difference in some minor part. Nor has any single machine been cheapened in order to make another to be marketed under different auspices. Each one of the large variety manufactured by this company is made for a special purpose. The durability, lightness of draught, and general excellence of a lawn mower depend to a great extent upon the material, but more particularly the skill employed in its manufacture in order to produce a perfect article. With the long and extended experience, and with certainly as perfect equipment in the way of a plant as it is possible for a manufacturer to achieve,

ning the machine backward, another point is made: The gears are stationary, and this, with the fact that the pinion is permanently affixed to the revolving cutter shaft, makes the gears less liable to wear and tear. They are quite easily sharpened by simply placing a nail or piece of wire in the hole in the outer edge of drive gear, and then turning the revolving cutter backward against the bottom knife, on which has been placed a little paste made of oil and emery. It will be noticed this does not necessitate either taking off

COLDWELL'S HIGH WHEEL IMPERIAL LAWN MOWER.—Fig. 1.

they have been enabled to produce a line of lawn mowers that are known in every part of the world where labor-saving devices of this character find a foothold. There is always satisfaction in handling a mower bearing the name of "Coldwell," from the fact it is guaranteed to give perfect satisfaction for the special work for which it is designed.

We present herewith an illustration of their High Wheel Imperial Lawn Mower, which is provided with the latest improvements emanating from the inventive ability of Thomas Coldwell, who may well be considered the father of the Lawn Mower industry in the United States. Among the many features for which the Imperial Lawn Mower is noted, may be mentioned its rigid frame. The knife bar is permanently secured to the side frames, which insures a rigid frame, which is not always the case when the knife bar has

drive wheels or pinions, nor changing the ratchets or pawls, which in almost all similar cases has to be done. Again, the hangers which carry the revolving cutter are so constructed that any wear which may occur either in them or in the revolving cutter shaft, can be readily taken up. It is claimed by the manufacturers that the ratchet and the adjustment, differing from other mowers, form the strongest points in the Imperial Mower. The fact that the Imperial Mower has attracted the attention of those having in charge the numerous great lawns in the several departments of the United States Government, and that it also was a successful mower

COLDWELL'S GOLF MOWER, WITH GRASS CATCHER.—Fig. 2

to be adjusted. The revolving cutter, which is adjustable up and down to meet the lower or stationary knife, is provided with the most perfect lock adjustment possible. Considerable attention has been given to the ratchet, which has usually been considered the weakest part of all lawn mowers, arising from its constant wear, which in the machine under review is so constructed as to be as durable as any other part of the machine, and well calculated to resist wear. In run-

ing the machine backward, another point is made: The gears are stationary, and this, with the fact that the pinion is permanently affixed to the revolving cutter shaft, makes the gears less liable to wear and tear. They are quite easily sharpened by simply placing a nail or piece of wire in the hole in the outer edge of drive gear, and then turning the revolving cutter backward against the bottom knife, on which has been placed a little paste made of oil and emery. It will be noticed this does not necessitate either taking off

We also illustrate Coldwell's Grass Catcher, which is used in connection with chain or geared roller mowers. This is a

very desirable addition to the utility of a lawn mower, making it a very suitable article for golf grounds. The grass catchers are made of heavy duck canvas hung on a steel frame, with fine mesh wire bottom. These for the side-wheel mowers can be easily lifted from the machine. The Coldwell six-blade chain roller mower is popularly known as Coldwell's Golfer, as it is an extremely light-running and very popular mower for golf grounds. The grass on a putting green should be cut very smooth and close to the ground. This is done with a greater degree of success, it is claimed, by a front cut machine, the height of cut being regulated by the front rollers. When the rollers are raised to the highest point it lowers the mower so that it will almost shave the sod. The substituting of large and small sprockets and a drive chain for gears lightens the draught, and the speed

COLDWELL'S IMPROVED HORSE MOWER. Fig. 3.

gained in combination with the six-blade reel, gives a smoothness of cut which can only be obtained by a higher gear for a greater number of blades in the reel, and this would add considerably to the friction of a mower.

The other illustration that we present herewith is the Coldwell Imperial Horse Mower, which is fitted up throughout with the best steel shafting, composition bushings or bearings, polished oak footboards, Loring Coe's knives, etc. The finest skilled workmanship that is put upon any mower will be found upon this perfect machine. These mowers have been adopted for use for many consecutive years by the United States Government and New York City Park Board after severe competitive trials and tests of durability.

### Stevens' Shot Guns and Rifles,

The J. Stevens Arms & Tool Co., Chicopee Falls, Mass., are at the present time placing on the market a series of single-barrel shot guns, and also an improved form of rifle designed for shooting .22 short cartridges, conforming to the

struction, durability, simplicity and shooting qualities of this low-priced gun. The gun is made in 12, 16 and 20 gauges, with barrels measuring from 26 to 32 inches in length, the gun weighing but 6 1-4 to 6 3-4 pounds. Another style similar to the No. 100 is No. 110, of which we have no illustration. It is made with an attached fore end, but with

FIG. 2.

automatic shell ejector. It has the same checkered grip and fore end and pistol grip cap that is shown in Fig. 2, which illustrates the next higher grade, it being made in the same dimensions and gauges as the No. 100. The third gun of the series, which is known as the No. 120, is illustrated in Fig. 2. It is referred to as a fancy ejector, with patent fore end, checkered and automatic ejector, the latter being a special device enabling the sportsman to change it from an ejector to an extractor by a couple of turns of a screw. This gun, which is referred to as possessing a fine finish, has pistol grip and is checked and capped. The Stevens-Maynard, Jr., Rifle, which is an improved form of the old Maynard rifle, is illustrated in Fig. 3. This has an 18-inch half octagon barrel, with steel frame, walnut stock and steel butt plate, and is intended to shoot .22 short cartridges. The rifle is claimed to be exceedingly accurate, all parts being machine-made, and is true to gauge and interchangeable as to its parts. It weighs but 2 pounds, 14 ounces, and is distributed packed one in a box. This, in addition to their new Crack Shot Rifle, of which the list is one-third higher

MAYNARD JR.—FIG. 3.

in price, is designed by the company to supplant the cheap imported Belgian Flobert Rifles, furnishing an American substitute, and the pushing of the sale of which will give the dealer satisfaction. Further information regarding these new and desirable goods will be furnished on application to the manufacturers.

The Iowa Farming Tool Co., Fort Madison, Ia., are responsible for some of the most artistic stationery that is being distributed in the interest of the steel goods trade that we have had brought to our attention. They are artistic little leaflets running four pages each, with half-tone illustrations printed in colors, showing great care in their preparation. No one would believe it possible that unless the goods were of the degree of excellence that the product of the Iowa Farming Tool Co. is acknowledged to be, such pains would be taken to exploit them. Included in their assortment of this class of advertising are some very handsome blotters distributed to the trade, with illustrations in colors forming part of the announcement, that show an amount of appreciation of artistic advertising that should be equally impressive to the trade receiving it. We like to add our meed of praise to this class of work, believing that it cannot do otherwise than augment the distribution of the product.

A young girl who carried her dinner was observed to eat her pie first. When asked why, she replied: "Well, if there's anything left, it won't be the pie, will it now?"—*Ex.*

FIG. 1.

illustrations given in the course of this article. Fig. 1 shows the Stevens Single-Barrel Shot Gun No. 100, which has an electro-steel barrel, choke bored; is provided with walnut stock and pistol grip, with rubber butt plate, and case-hardened frame. It is bored for nitro powder, and possesses a top snap, low-rebounding hammer and forearm attached to barrel. The company refer especially to the con-

### J. B. McCarty & Co.

George B. McCarty, son of the head of this well-known firm, has recently been admitted to partnership. He was born in Brooklyn, New York, 1873, and was graduated from the High School in that city in 1890. During that year he made his first business venture with H. L. Judd & Co., with whom he remained a few years, when he became identified with J. C. McCarty & Co., 10 Warren Street, New York, the senior member of which firm is his father. While George B. McCarty is still a very young man, he has had the benefit of considerable experience as a salesman, and from his long association with his father, few men are better known among the buyers in the jobbing trade, as well as the department stores and catalogue houses throughout the country. His firm has, since its organization in 1858, made

GEORGE B. MCCARTY.

a specialty of representing manufacturers of Hardware and kindred lines, and to-day numbers among its principal agencies many of the leading manufacturing companies, a complete list of which will be found enumerated in their full-page advertisement which appears on page 13 of this issue.

The firm has some sixteen salesmen on the road, canvassing the entire country almost continuously. They have resident salesmen in Montreal, Buffalo, Chicago, San Francisco, Los Angeles, Knoxville, Covington and Cincinnati, independent of their home office staff. They control a large export trade in Canada; also in Mexico and South America as well as China and Japan.

Among the many concerns with whom Mr. McCarty is in almost daily touch are the large representative department stores and catalogue houses in the Metropolitan district, with whom he has been instrumental in introducing to the buying population a great many novelties which to-day are household necessities.

He has a great many years of usefulness before him, and, with a continuance of the energy and enterprise thus far manifested, should prove eminently successful in his career.

### Movement in Austria Against American Exports.

The expiration of the tariff treaties of Austria-Hungary in 1902 will necessitate a general revision of the customs laws of the country. There is a strong element in Austria which views with great displeasure the increasing imports of American commodities that come into direct competition with the products of the Austrian soil or workshop. The representatives of the Austrian iron and steel industry have repeatedly demanded the imposition of higher import duties upon our iron and steel ware, and the owners of olive groves have combined with the refiners of edible oils to demand a material increase in the duty on all oils which are used as substitutes for olive oil. There is no doubt that the sole aim of the latter movement is to prohibit entirely the importation of American cottonseed oil.

Recently, the Austrian Butchers' and Packers' Association appealed to the various chambers of commerce in the Empire to join them in petitioning the ministries of agriculture and commerce to prohibit the importation of American meat. The association claims that no necessity whatever exists for the importation of foreign meat stuffs, and that Austrian cattle breeding and trade are being greatly harmed by such importation. All the chambers have promised their co-operation in the proposed movement, with the exception of that of Klagenfurt. This body declares that it is not in favor of prohibitive measures, on account of the reprisals that would probably follow. It favors, however, a more thorough examination of all meats imported, declaring American methods of inspection too superficial to satisfy the European consumer.

There is certainly every indication that the new tariff laws of the monarchy will be framed with a special view to prohibiting the importation of American products, unless the manufacturers, as well as the laboring classes, enter a decided protest against such a policy—the former from fear of American retaliation; the latter because of the rise in the cost of necessities of life which would inevitably follow.

Austria buys from us much more than she sells to us, and that is perhaps the reason why a majority of her economists do not fear American retaliation. Prohibitionists in Trieste point to the fact that the total value of merchandise exported from this port to the United States in the year 1899 was only \$792,611, while direct imports from the United States during the same year amounted to \$7,876,990.

Of course, it is the agrarian element that has started, and is constantly furnishing fuel for this agitation. Public opinion, as far at least as it is at present expressed, is certainly on the side of the prohibitionists, who, it must be remembered, are a well-organized and active body, while their opponents, however numerous, are scattered and slow to move. It may, therefore, not be fully realized that there is another side to this question until it comes up for a final hearing.

FREDK. W. HOSSFELD, Consul.

### Ten Greatest American Railroads.

A table showing the mileage controlled by the principal railroad companies of this country on July, 1900, was compiled by the *Railway Age*. The ten largest systems are as follows:

New York Central.....	10,410
Pennsylvania.....	10,392
Canadian Pacific.....	10,018
Southern Pacific.....	9,362
Chicago & Northwestern.....	8,463
Chicago, Burlington & Quincy.....	8,001
Southern Railway.....	7,887
Atchison, Topeka & Santa Fe.....	7,880
Chicago, Milwaukee & St. Paul.....	6,437
Union Pacific.....	5,584

The Pennsylvania Railroad is the largest system in the country under one name. It is shown that twenty-eight railroad companies control a total mileage of 147,061.

The greatest height ever reached in a balloon was 26,160 feet. Two of the three aeronauts who made this ascent were suffocated.

### About Trusts.

The country has heard much about trusts of late. Some of the talk has been, after a fashion, wise; mostly it has been otherwise—foolish to a degree, absurd as ignorance and mulish conceit could make it. It was not so very long ago, the great-grandfathers of this generation were boys then, when workmen in England and over Western Europe, smashed iron and cotton machinery, being moved to such vandalism by the fear that the machines would, by making possible the doing the work of ten hand workmen by one machine workman, send nine out of every ten to the alms house or simply starve them to death.

But the world moved along, common sense and experience proved too much for the stupid and stubborn conservatism, that then, as in all times and countries, seeks to retain the outgrown and the worthless. Wages rose, instead of going down. Manufactures were so cheapened that great numbers wore better clothes and more clothes. Others worked with improved tools afield and at the bench and anvil. The old power loom and spinning jenny brought cotton dress goods down from 40 cents a yard to 12 1-2 cents, to 10 cents. Polished cast iron and steel plows replaced the old wooden mould-boards, and one man could turn over more ground than two or three could in the one man's father's time. The things the carpenter worked with were faster tools than those of the good old days. All this was chiefly the work of individuals. By and by the virtue and power of combination was found out, and men sought authority from the State to put their means together; they called these new kind of firms corporations, and they did wonders for that time. Invention came to the aid of combined capital. The blast furnace was invented for the smelting of iron, copper, zinc, silver and other ores.

In our own country, fifty or sixty years ago, cloth was made for the family in nearly every farmhouse. The wealthiest farmers wore homespun, clad their feet in cow-hide boots, the leather being tanned by some roadside rural establishment, and the boots made by the village Crispin. Rag carpets covered the floors, if they were covered at all. The housewife looked after the home keeping and knit a pair of stockings in a week. The men mowed their grass and cradled their grain, two of the most wearing drudgeries that ever fell to the lot of a civilized being. The mowing machine laid away the scythe, the harvester superseded the cradle, as the factory for making cloths and clothes and boots and shoes dispensed with the domestic product in these lines; and the result is a better clothed, better shod, better housed and better fed people, that has outgrown the primitive era and its methods. Coupled with the railroad representing a vast aggregation of capital, the factory, enlarged to many times the dimensions of its predecessor fifty years ago, has made the luxuries of our fathers the necessities of their sons. And we could not afford one-half of the good things, the beautiful things, the means of health and happiness we lavish on our families and ourselves, but for the vast aggregations of capital in all the lines of staple production. The howlers against the great factories of iron and steel goods, of cottons, woolens and silks and food materials, are the lineal descendants of the fools who smashed the crude trip hammers, power looms and spinning frames in the early years of the century that has just gone out. But let us revert to the matter of trusts. The earliest combinations of corporations into still larger combinations, were made in England. Now such monopolies are very common in that kingdom, also in Germany and France. Since 1888, no less than 328 concerns in different lines have been combined in Great Britain. There are fourteen of these trusts. Their aggregate capital is about \$235,000,000 expressed in our money. One of them, the calico printers' trust, combines sixty corporations, and has a capital of \$46,000,000. The average rate of profit these combinations pay their shareholders is less than 6 per cent., though the Coats thread monopoly,

capital \$28,000,000, has paid from 10 to 40 per cent. dividends and seldom pays less than 20 per cent. The English Exporters' Union controls the export trade of iron and steel, and while it is a pool and not a corporation, it wields several hundred million dollars of capital, and virtually regulates the largest export iron and steel business in the world.

These combinations have grown up in England because competition with other countries' products forced the English concerns to save expenses of production, freight, etc., or go bankrupt.

Our great so-called trusts have been the natural evolution of the small and large corporations, that were originally organized to meet the people's demand for better and cheaper clothing, tools, shoes, nails and other iron goods, wire, machines, the long list of things we buy to eat, to wear, to work with. We will no more break them up than our fathers and ourselves broke up McCormick, Aultman, Case, the Millers, the vast textile and shoe factories, out of all of which the immense trusts have been formed. The latter need regulation, as the original corporation did a generation ago; but the enlarged co-operative corporation is as needful now as the several members that compose it were needed a few years ago; the great things have come when the time was ripe for them, and they have come to stay. The next generation will laugh about our shivering fear of them and our futile efforts to destroy them, as we laugh at the blind and dull fellows who, for a half century, fought against the introduction of labor-saving devices and prophesied that the machines would fill the poor houses with the workers, and give the manufacturers everything on, above, and under the earth.—*Chattanooga Tradesman*.

### Herrick's Spring Sampling Hooks.

F. A. Herrick Co., Jackson, Mich., are manufacturing the Spring Sampling Hooks which are illustrated in the cut given in connection with this article. They form a very desirable acquisition for the Hardware dealer, as it is an article he has felt the want of many times. By the aid of this useful appliance, samples are readily removed from the front of the sample boxes and may be sold and replaced with new stock in almost every instance, making it entirely unnecessary to leave an old, rusty, worn-out sample on the

front of the boxes to sell by, simply because it is usually too much trouble to remove it and replace it with a new one. This enables the dealer to keep fresh samples constantly before his customers. They are made in two sizes. The Fig. 01 hooks are formed from No. 18 tinned steel spring wire, and are the proper article for all light goods. The Fig. 02 are heavier, being made of No. 14 wire of the same quality, and are strong enough for all samples of heavy goods. In applying them to the sample boxes, the long end of the wire is passed through a hole in the box from the inside, and pressed up to within about a half inch from the box, as shown in the cut herewith. The wire is then bent up to fit whatever is being sampled. Should the end in this case be found too long, it may be cut off without detriment. Then drive the short end of the wire in the box, and if this is too long, cut this off also, so that it may go in up to the shoulder. By this method the hooks are held firmly in place, and by pressing on the spring slightly from the inside of the box, a sample may readily be removed.

### Wire-Nail Industry.

A HISTORY SHOWING HOW IT SPRUNG FROM A SMALL PLANT.

A quarter of a century ago the wire nail was practically unknown, states the *Chicago Record*, while to-day it is controlled by one of the greatest trusts in America and is of more general use than any other item in the iron industry. The story of the stride of this industry to so important a place is a splendid illustration of the inventive skill and the business sagacity of Americans, and at the same time is touched with a romantic interest that makes it fascinating. It was a clergyman who made the first wire nails in America and brought them to that degree of perfection that they supplanted the iron nail, but that clergyman has long since passed and the captains of business have taken up the results of his genius and through them have levied the tax of an enormous trust upon the people of the United States, and, in fact, upon the people of the world.

#### FIRST MADE IN COVINGTON.

It was in Covington, Ky., that the first wire nails were made in America. In 1875 Father Goebel was pastor in charge of St. Augustine's Catholic Church in that city, and he was one of those rare men who mingle the practical with their piety, and while he directed his one eye on eternity the other was fixed on one thing or another whereby he could turn a dollar. And in addition he was a mechanical genius. Father Goebel had studied for the ministry, had retired and married and raised a family, and had then returned to the pulpit. But all the time he was in close touch with the world and was connected with the first one thing and then another that offered hope and promise in a material way.

Before Father Goebel came to this country from Germany he had seen Frenchmen and Germans hammering nails out of wire. When he had established himself in the ministry at Covington he opened a forge in an old outbuilding standing in a brickyard. He started the making of wire nails, first by hand, and gradually one improvement after another came to his mind and was carried out until the nails made were more useful and could be made more cheaply. Soon after he began he improved upon the old nail by cutting barbs in its sides, and by this they were made to hold more firmly. Then, to accelerate his work, he made a die into which he slipped the wire that had been cut to proper lengths, and while resting on these dies the head was pounded on the nail. On an anvil he hammered on the point, and the barbs were cut in the sides by hand. It was the nail that is made to-day, but the production was so expensive that they were impracticable for ordinary use.

#### IMPROVEMENTS IN MACHINERY.

It was about this time that the French introduced a machine that would do what Goebel was doing by hand, and as soon as the latter heard of it he imported one of these machines. The introduction of this machine was the real beginning of the wire-nail industry in this country on a large scale. And this same machine is now in this city, stacked in the attic at the large local plant of the American Steel and Wire Co. Covered with dust as it is, and stored where it is never seen, it is nevertheless one of the epoch markers of this industrial age, and from this comparatively crude device sprung within a few years an industrial trust that is capitalized at \$24,000,000, and that is making a good percent. on that large amount of stock. It was a queer machine when it was received, but the principle was right, and the great machines that to-day turn out hundreds of thousands of nails a day are constructed on identically the same plan. It was operated by hand and the speed was sixty nails a minute. Goebel attached a flywheel, geared it to steam, and by other improvements increased the machine's speed to double this capacity, which was as many as twenty or thirty men working by hand could produce. This was the first "single-header" machine, making one nail at each stroke, and this machine produces, with its present improvements, as high as 45 nails a minute, while the double-headers, produc-

ing two nails at a stroke, turn out from 550 to 600 a minute, or a total of 30,000 an hour.

Goebel was a genius when it came to mechanics, but in business he had little ability. With an enterprise that was to make many men millionaires he could not keep even. His little congregation had faith in him, however, and it was not infrequently that a collection had to be taken up to support his little industry, as well as to support the church. Time and again this happened and the congregation was over-patient, but at last the members refused to put up any more and the industry fell into the hands of two Germans—Michael Baackes and James Michaelburg. These two operated it for awhile with indifferent success, and then the little shop came to the control of B. H. and L. H. Gedge, two young men who became the real developers of the wire-nail business. The two had opened a plant in Cincinnati. They later moved both plants to this city and now reside here, comfortable in a fortune made in a few years.

#### PREJUDICE AGAINST WIRE NAIL.

The general introduction of the wire nail over the country is yet fresh in the memory of comparatively young men. At the outset it met with a decided prejudice against it and in favor of the old cut iron nail. This prejudice was so strong that salesmen on the road had to carry hammers and blocks of wood with them in order to demonstrate the superiority of the wire nail by driving the new and the old into blocks and then splitting the blocks open. Business came slowly. In those days an order for a few kegs was very comforting, and when the Chicago & Northwestern road gave an order for 1300 kegs it created consternation among the makers of the cut nails and untold delight among the pioneers in the new industry.

It was a notable occasion in 1884 when the company made a shipment of fifty kegs. So notable was it that the plant was shut down that the men might see the car pulled out. Now barges, laden with from 10,000 to 20,000 kegs, pass Covington quite frequently on their way from Pittsburgh to points along the Ohio and the Mississippi. Cigar manufacturers took up the use of the wire tack very extensively and soapmakers were the next converts. In Louisville a traveling salesman showed the nail to two customers, both tobacco dealers and doing business on opposite sides of the street. One of these dealers refused to buy the nails because they would not hold the caddies together. This was what he thought. The other refused on the ground that once they were used the caddies could never be opened save by tearing them to pieces. So this general misinformation obtained, and backed by a natural and fostered prejudice the wire nail had to fight its way from start to finish. But the reward was enough. The annual production of these nails reaches at present from 8,000,000 to 10,000,000 kegs.

#### SOLD FOR \$2,000,000.

The Gedges, on bringing the factories to this city and combining them, took in with them C. P. and C. H. Garvey, young men of Covington, and E. J. Buffington, the son of a tobacco merchant of Cincinnati. The plant was enlarged here by the addition of a rod and a wire mill and its business soon began to prosper. Other mills began going up over the country, but the demand for the nails increased much faster than the mills and they all prospered and waxed strong. Two or three years ago these original developers of this industry sold out their local plant to the American Steel and Wire Co., the purchase price being \$2,000,000. All of these men had made their fortunes. The Garveys and L. H. Gedge have retired, and are enjoying life as suits their fancy. B. H. Gedge has built a large iron-roofing factory; E. J. Buffington became one of the head officers of the wire-nail trust and later became president of the Illinois Steel Co., and Fred Gedge has lately become manager of the Western plant for this same trust. Father Goebel, who made their fortunes possible, died in poverty in a Cincinnati hospital six years ago.

# HARDWARE PRICE BOOKS.

Arranged by R. R. WILLIAMS, Hardware Editor of The Iron Age.

These Price Books are made in a variety of sizes and styles adapted to pocket, store or desk use, and are specially arranged to meet the requirements of the Hardware and Metal trades. They are printed on paper of superior quality and bound in grain seal leather.

Price Book A.

Columns are provided for the name and number or size of goods, for noting from whom purchased, date of quotation or purchase, list and discount, and for entering freight expenses. Under the heading of selling prices, the regular and any special price or remarks in regard to the goods are given place. *Size of page, 4 x 7 inches.*

FOUR EDITIONS:

- A, 200 pages, - - \$1.00
- A 2, 400 pages, - - \$1.50
- A F, 200 pages with flap, 1.25
- A F 2, 400 pages with flap, 1.75

Price Book B.

In this book each page is complete in itself, and the record of prices does not, as in Book A, run across two pages. Thus it accommodates a larger range of goods with much less detail in the record. By the use of familiar abbreviations is sufficiently large for the convenient and concise record of prices. *Page, 4 x 7 inches.*

FOUR EDITIONS:

- B, 200 pages, - - \$1.00
- B 2, 400 pages, - - \$1.50
- B F, 200 pages with flap, 1.25
- B F 2, 400 pages with flap, 1.75

Price Book C.

The headings in Book C run across the top, in a line parallel with the hinge. The details of weight and freight contained in Book A are omitted, and a single column headed "Add" given for the insertion of freight or other expenses. Under the selling prices space is left for the wholesale price, the retail price, and for remarks. *Page, 4 1/4 x 8 inches.*

FOUR EDITIONS:

- C, 200 pages, - - \$1.00
- C F, 200 pages with flap, - 1.25
- C 2, 400 pages, - - 1.50
- C F 2, 400 pages with flap, - 1.75

Suitable for desk and store use, and for salesmen on the road. A number of pages at the back of the book are arranged for memoranda. *Page, 5 x 8 inches.*

FOUR EDITIONS:

- D, 240 pages, - - \$1.50
- D F, 240 pages with flap, - 2.00
- D 2, 480 pages, - - 2.50
- D F 2, 480 pages with flap, 3.00

Price Book D.

## MULTIPLE INDEX PRICE BOOKS.

A special feature of these books is the index, which is arranged with special reference to the classification of Hardware Goods, each index character giving the first two or three letters of the names of Hardware articles. There is an index character to every page, enabling immediate reference to any of the contents of the book. The ease and convenience with which the books can be used is indicated in the following examples, taken from Book F:

For Augers, turn to **AU**  
" Parers, Apple " **PA**

For Chisels, turn to **CH**  
" Cutlery, " **CUT**

For Iron, turn to **IRO**  
" Irons, " **IR'S**

Both E and F are made of Heavy Ledger Paper and strongly bound in grain seal leather.

Price Book E.

### Credit Speculation.

The query naturally arises, is there such a thing as Credit Speculation? From the reckless way in which some people grant credit, we are led to believe that such is the case. In conversation with a prominent attorney recently regarding commercial failures, speaking from an extensive experience with debtors and creditors, he stated: The creditor is to blame to a large degree for a very great many of the difficulties arising between the debtor and creditor. Overzealous to do a large business, he neglects to be cautious, conservative and fails to correctly discriminate between those whom he should and should not trust.

In analyzing this statement, let us endeavor to discover in what respects it is correct. To be equitable, we must admit at the outset that there is a great deal of truth embodied in this statement. Like all problems, whether political, social or commercial, there are two sides to this question, viz., the debtors and the creditors.

The purpose of this article will be to point out a few of the many errors that have crept into our modern ideas of doing business, and show how it is possible to speculate in credit. This, of necessity, was to a certain degree the condition under which our forefathers transacted their business, but in a time when profits were considerably larger than they are at present. A man to indulge in such methods to-day, with all the advantages of commercial agencies and other sources of information open to him, is reckless, to say the least. Greed for the mighty dollar and business has been the death-knell of many a business man.

In what respect, then, is the creditor to blame for the difficulties arising between the debtor and the creditor?

We will take a hypothetical case, to illustrate. Assuming that A is the debtor, doing business in one of our smaller towns, possesses the average ability usually found in that class of merchants, and a man of moderate means. B, C, D, E, F, G, and we might continue indefinitely, because they are so numerous, are the creditors. In due season, B, C, D, et al., start out their salesmen with the injunction: "Don't fail to sell A all the goods he will buy," which instruction every man obeys, as a matter of course; every fellow's goods are the best; all have bargains galore. A buys here and buys there, and in the course of time finds himself overloaded with a large stock, in which all his good money is invested, and for which, perhaps, he will be unable to realize 50 per cent. on the dollar. Time rolls on; his condition gets worse; he is unable to meet his obligations, and he is brought to realize that he is insolvent. If he is an honest man, he will stop short and transfer his business to his creditors. If, however, he is indifferent or inclined the other way, he will make an effort to take care of No. 1. How well he succeeds, a great many have learned to their sorrow. What is the remedy? When A appears for your consideration, don't think that you are the only people that are going to sell to him, but take into consideration that there are others; obtain, if possible, and, in a doubtful case, insist upon it, a statement which will show A's net working capital. Then follow the common-sense course. Unless you know positively from how many houses A is buying, in justice to others, as well as yourself, you must adopt a rule such as is in vogue with Credit Insurance Companies, of limiting your sales, according to the confidence you have in the ability and integrity of A, to 5 per cent. of his net working capital. If such a rule were adhered to a great many of our present-day "lack-of-capital" failures would be avoided. We all can do a great deal to assist A to keep within his limits. Overzealousness on the part of very many to do a large business disregarding the safeguards which should be thrown around every mercantile house to insure its success, leads to speculation in extending credit. To this reckless procedure there can be but one result, Failure.

It is worth while to recall a remark made by a man who amassed a fortune. "I never speculate in matters of business," it is the only safe course to pursue.

Again, is it not true that there are a class of persons (you will find them everywhere), looking for the lambs, and by artful means attempting either by giving a false statement, or by a great show of wealth and prosperity, to secure credit? To illustrate, we will cite a case in point of a party who operated on this fashion. He made a great display, used attractive stationery, furnished doctored statements under the direction of, a shyster attorney, purchased goods in small quantities and paid them in ten days, gradually increasing his purchases and paying promptly, until he had his game, when he wound up with purchasing all the goods he could get, which were sold at ridiculously low prices to close quickly, and when the bills became due and attempts were made to collect, the accounts were returned as uncollectible; all this was in the face of adverse ratings of this party by both Dun and Bradstreet. It seems almost incredible; one is amazed at the cupidity of some business men. Is it any wonder that our attorney friend views the relation of debtor and creditor in this light?

This is only one feature of how these sharps operate, and are usually the kind of cases that find their way into the attorney's hands. It does appear that credit is too cheap, and as it is commonly said, "I can get all the goods I want. If you will not trust me, others will." It behooves the credit men as well as the business men to carefully scrutinize all new business, and if perchance you open an account with your new found friend, keep your eyes on him until you are convinced that he is a solid man and worthy of your confidence. Better do a small business safely than a large business on speculation. Stop credit speculation. Learn to discriminate between the worthy and the unworthy, when, whom and how much to trust, and when you have decided that point, stick to it.

F. C. BRUNHOUSE.

### A Complimentary Dinner.

A complimentary dinner was given to Edward C. Van Glahn and James H. Kennedy, who were respectively the Vice-President and Secretary of the Hardware Club of New York. It took place in the rooms of the Hardware Club on the evening of March 21st, 1901, and the souvenir programme that was prepared for the participants in this happy affair, forms one of the handsomest brochures that has come to our attention in connection with a similar occasion. Its preparation by Alfred D. Clinch was in the nature of a surprise to those present, being laid out in the most artistic manner, filled with portraits of the Governors, and prominent in the earlier pages appeared page portraits of the two honorable gentlemen in whose interests the dinner was given. On two of the pages are presented the portraits of the incorporators and members of the first Board of Governors in 1892, which were as follows: Webster R. Walkley, William H. Williams, J. Leonard Varick, Peter McCartee, Eugene Bissell, Alfred D. Clinch, Brace Hayden, Charles Daly, Mortimer C. Ogden, Thomas F. Keating, Richard R. Williams, Robert H. Swayze and Arthur G. Sherman, which gentlemen, in connection with Edward C. Van Glahn and James H. Kennedy, of whom full page portraits are given, are all represented by their individual portraits upon the two pages referred to. This is followed by a page giving the additions to the Board of Governors since the date specified, portraits accompanying the same: George J. Loughton, George H. Sargent, James D. Foot and Robert Sickels. Mention is made in each case of the positions occupied by these distinguished members, and the committees upon which they have been active during the long time that they have attended to the duties connected with these offices. A superbly excellent menu, prepared under the supervision of the steward of the club, was followed by a number of speeches, the toastmaster of the occasion being Alfred D. Clinch. George H. Sargent responded to "Whether Predictions," Richard R. Williams discoursed on "The President and His Cabinet," James H. Kennedy did honor to all concerned by a "Greeting to the Officers Elect," and the governors generally under the designation of "Chitchat Without Logomachy" made brief addresses and entertained in general discussion the bright ideas usually engendered in a dinner of this character.

## RECENT TRADE PUBLICATIONS.

**ROBIN HOOD POWDER Co.**, Swanton, Vt.; New York office in charge of Tower & Lyon, 95 Chambers Street. Booklet of 14 pages, entitled "Powder Facts," in which the facilities possessed by this company for the manufacture of smokeless gunpowder, shells and Loaded Ammunition is given in an exceedingly interesting and attractive manner. Full descriptions of the various excellent qualities referred to as being peculiar to the Robin Hood Powder are given, together with list prices of the various sizes in canisters and otherwise, and also Loaded Shells, of which they are large manufacturers. The booklet is nicely gotten up, well printed, and is one that will doubtless be preserved by the recipient.

**SCHWERDTLE STAMP Co.**, 39 Fairfield Avenue, Bridgeport, Conn. Envelope-size catalogue of 20 pages, covering a line of Steel Stamps, Stencils, Seals, Baggage, Key and Trade Checks, Brass Labels, Burning Brands, Carriage Machinery Plates, etc. The catalogue covers all these varieties of goods in an intelligent manner, so that it may be readily ordered from, and gives throughout list prices of the same, so that an estimate of cost may be ascertained.

**TIPP BUILDING AND MFG. Co.**, Tippecanoe City, Ohio. 20-page catalogue of Lawn Furniture and Kitchen Furniture manufactured by this company, which was established in 1864. It is well printed and illustrated throughout, replete with articles of general utility that can be easily handled by the Hardware trade, which includes the Tippecanoe Swing, illustrated in our advertising columns; also Folding Lawn Chairs, with and without arms, one of which is illustrated, showing the foot-rest, which is a very popular specialty with them. This company makes quite a variety of campstools with and without backs, folding settees of various sizes, a variety of ironing tables, and a zinc-covered kitchen table.

**BRIDGEPORT MFG. Co.**, Bridgeport, Conn. Illustrated catalogue of 20 pages in pamphlet form, covering their line of Hardware specialties, which is a large one, embracing pliers, cutters, shears, scissors, nail pullers, tack pullers, can-openers, screw-drivers, etc. These goods are well illustrated, list prices and descriptions being given throughout, and present a very attractive line of goods that may be sold by every Hardware dealer in the country, who should be placed in possession of this catalogue.

**COOPER & MCKEE**, 113-121 Gwinnett Street, Brooklyn, N. Y. Pamphlet catalogue of 52 pages, for 1901, covering the product of this well-known plant, embracing refrigerators and ice chests for families, hotels and restaurants, houses and flats, grocers, butchers, lager beer, ice cream, florists and soda-water fountains. Embraced in its contents are also enameled iron water-tanks and incidental mention is made of a line of stoveboards that are well-known to be among the superior products turned out by this firm. The catalogue is handsomely illustrated throughout, some pages showing the glass-lined refrigerators, being printed in colors, with the bronze trimmings shown in a realistic manner, giving evidence of an artistic desire to make the catalogue a complete one. It should be in the hands of all of our readers handling this class of goods.

**G. DROUVE Co.**, Bridgeport, Conn. Pamphlet catalogue of 36 pages with stiff paper covers, embracing their line of Galvanized Cornices and Skylights, Finials, Crestings, Ventilators, Conductor Pipes, Eave Trough, Tin Roofing, etc. Printed on excellent paper, illustrated throughout, showing

all the various styles of goods mentioned above manufactured by this well-known company, including in their descriptions and illustrations Skylights and Ventilators in all the various styles demanded by the architect, including such skylights as Single-Pitch Skylight for a steep roof; Hip Skylight with a Louvre Ventilator; Ridge Skylight with a continuous Ridge Ventilator; Curved Extension Lights, and even photographers' skylights in all their manifold peculiarities in the way of construction are fully illustrated. Artistic metal fronts are presented for dwellings and apartment-houses; also for store fronts, opera-houses, armories, etc., indicating the wide range of work of this character this concern is able to take in hand, in connection with which they state that having made extensive improvements in their plant, introducing all the best labor-saving machinery and appliances, as well as power, they have reduced the cost of manufacturing to a minimum. They feel the conveniences of their establishment are second to none in the country. The catalogue under review would bear out this assurance.

**SEYMOUR SMITH & SON**, Oakville, Conn.; John H. Graham & Co., 113 Chambers Street, New York, selling agents. Pamphlet catalogue of 16 pages covering a line of Hardware specialties that have long been manufactured by them, which includes Pruning Shears in large variety, of all the patterns that are familiar to the trade, and including several that are more novel and original in design, such as the Loop Handle, Volute Spring, the Levin Pruner and the California Pattern with Volute Spring. Included in its contents are the Rockdale Pruner, Standard Tree Pruner, together with their line of Hardware specialties that covers Bull Rings, Cattle Leaders, Saw Sets, Bench Hooks and Spoke Shaves.

**UNION HARDWARE Co.**, Torrington, Conn.; New York office in charge of Tower & Lyon, 95 Chambers Street. 1901 catalogue of Gun Implements, embracing the entire line of these goods, which is very complete in its character, meeting all the requirements of the trade, and including Union Reverse Head Closers in large variety; Re-Cappers, Extricators, Powder and Shot Measures, Cleaning Implements, Cleaning Rods, Field Cleaners and Loading and Cleaning Sets. This salable assortment includes Loading Blocks, Whistles, Turkey and Duck Calls and Loading Mallets. Those of our subscribers handling this line of goods would find this a very advantageous catalogue to add to their collection.

**WILMOT & HOBBS MFG. Co.**, Bridgeport, Conn. Catalogue F, which is a pamphlet catalogue of 20 pages, devoted almost exclusively to the exploitation of the various oilers of every description manufactured by this well-known company, this being one of the special divisions of their product. It includes the line of Steel, Anti-Rust Oilers manufactured from cold-rolled "Swedoh" steel prepared at their own rolling mills, and covering a large variety of styles, shapes and sizes, with nozzles running from 3 to 18 inches. Embraced in the contents will also be found a large line of Railroad Oilers, Engineers' Fillers and Tallow Pots, Engineers' and Steamboat Sets, with round or oval tray; Mowing Machine Oilers, Textile Mill, Siphon Oilers, Black Enameled Steel Oilers, Jacket Lamps and Seamless Steel Lamps. To this has recently been added the "Automobile" Can, for which a new demand has sprung up, and which was illustrated by us in our recent issue. This catalogue is very complete in the line of goods represented in it, and should be added to the library of all up-to-date dealers.

## NEW GOODS AND SPECIALTIES.

### "Enterprise" Cherry Stoner.

Among the many articles for household use manufactured by the Enterprise Mfg. Co., of Philadelphia, Pa., is the "Enterprise" Cherry Stoner, illustrated herewith. They are constructed with a patented regulating device, the simplicity of which makes it exceedingly easy to adjust the machine for the different sizes of cherries for the pitting of which it

"ENTERPRISE" CHERRY STONER.

may be used. It absolutely insures the jaws retaining their position when properly set. It is highly recommended for rapid and effective work. It is made in two finishes, No. 17, japanned, and No. 18, tinned, the latter being the more salable of the two, and exceedingly popular with the trade. They are of the same general design and finish as those formerly marketed as No. 1 and No. 2.

### Automatic Trousers Hanger.

Chicago Form Co., 122 La Salle Street, Chicago, Ill., are placing upon the market an extremely desirable specialty that can be readily handled by the Hardware trade. It consists of the Automatic Trousers Hanger, an illustration of which we present herewith. It is claimed to be constructed upon correct principles that commend themselves. It hangs the weight of the garment on the parts desirable to be stretched. The clamping jaws arch over the upright seams, which need no stretching, and in this respect differs materially from competing hangers which permit the entire weight to hang by the seams. It is claimed by the manufacturers that no clamp should extend entirely across the leg,

AUTOMATIC TROUSERS HANGER.

for the hem of the bottom should not be creased, and as these important points have been observed in the construction of the Automatic they form its most popular feature. They are made of specially rolled steel, which is first copper-plated and then nicked so thoroughly that it never marks the fabric. By the use of devices of this character it is claimed the clothes closet becomes more than twice as capacious. Upon application the manufacturers will be only too glad to furnish a booklet in which numbers of testimonials are given certifying to the many advantages obtained by the use of this important device.

### New Chisel Set, No. 401.

C. E. Jennings & Co., 101 Reade Street, New York, are manufacturing something quite new in the way of a superior Chisel Set, which is marketed under the number "401," and

the general appearance of which is shown in the illustration herewith. They are made from the finest tool steel that it is possible to obtain for the purpose, and are provided with cocobolo handles, making them exceedingly attractive in appearance. The blades are 3 3/4 inches long instead of the larger style that is found in general use. They are designed to fill a demand that has sprung up during the last few years for an article of this description to be used in manual

NEW CHISEL SET, No. 401.

training schools and by advanced amateurs, and also among skilled mechanics desiring something different from the ordinary kind now on the market. They are made with this shorter blade so they may be more easily used when it is necessary to get in closer contact with their work. They are distributed to the trade already sharpened for immediate use. This will be found a very desirable addition to the usual stock of any Hardware dealer handling fine tools.

### "Solidhed" Eyelet Pliers.

Hawkes-Jackson Co., 82 Duane Street, New York, are placing before the Hardware trade a very clever device of its kind, which is marketed under the name of the "Solidhed" Eyelet Plier. We give an illustration indicating the manner in which it is used. It is really a combination punch and eyelet set. It will punch a hole and set an eyelet without removing the punch from the hole. This makes it an extremely convenient article for binding documents, papers, or fabrics in manufacturing. They are able at present to supply them

"SOLIDHED" EYELET PLIERS.

in four sizes, one intended for metal eyelets for binding paper, and the other three sizes for the use of metal eyelets for leather. In its use the simple method is followed of first punching a hole, the punch being left in the hole. The eyelet is then placed small end down on top of the punch, and then the pliers are closed. This completes the operation, and the eyelet will be found firmly set. In case of inability to obtain these pliers from the jobbers the dealers can order them direct from the makers, as above.

gives it the largest amount of rubbing surface with less labor than many of the so-called washers on the market. Among the points of interest which are referred to by the manufacturers, it is claimed to be exceedingly easy to operate; so constructed that the clothes cannot be torn, and yet in the operation of washing they are thoroughly cleaned. It is adjustable to the extent that the size of the wash does not interfere with its work. If necessary, only a single article may be washed, or a much larger quantity at the convenience of the person using it. It is claimed to wash the finest clothes, lace curtains and even needle-work, without any fear whatever of tearing them, and certainly much better than it can be accomplished on the usual washboard. In fact, it is simple in construction, possessing no complicated machinery to get out of order, and is marketed at an exceedingly reasonable price.

#### Iwan's Post Hole and Well Augers.

Iwan Bros., Streator, Ill., are the manufacturers of a very desirable Hardware specialty suitable for the Spring trade. It is the Patent Improved Post Hole and Well Auger, an illustration of which accompanies this article. It is designed for boring post holes and wells; for electric and telegraph uses, and is useful when prospecting for phosphates and minerals. With this auger an operator can do three times as much work, it is claimed, as with any similar tool now on the market, and it is stated in connection therewith that the condition of the ground makes no difference in its operation. It is successful whether wet or dry, being ex-

IWAN'S POST HOLE AND WELL AUGERS.

ceedingly effective in operation when removed from the hole. It is furnished in eight different sizes, running from four to twelve inches. Hardware dealers who have not been made familiar with the merits of these advantageous articles, by writing to the manufacturers will receive a number of testimonials certifying to their excellence for the purposes for which they are manufactured.

#### "Gem" Nutmeg Grater.

Among the many novelties manufactured by the Caldwell Mfg. Co., Rochester, N. Y., they are introducing among new goods the "Gem" Nutmeg Grater, which is represented in the accompanying cut, Fig. 1. It is so constructed that the rotary motion makes the grating a continuous performance. A very few turns suffice for its ordinary use, no springs being used. The nutmeg can be grated fast or slow, being regulated by the pressure of the right-hand turn crank. It is claimed to be one of the fast working graters now on the market. With the first order the company send out a handsome easel, made of wood, finished in ebony, on which are placed a half dozen of these graters, labeled in a proper man-

ner "Gem Nutmeg Grater. Price 10 cents." It forms a very attractive article to place on the showcase, as the con-

"GEM" NUTMEG GRATER.

trast with the bright parts of the grater attracts the eye of every customer and makes it an exceedingly popular article to handle.

#### Iron and Steel Industries in Canada.

The attention of capitalists is being directed to the possibilities of the iron and steel industries of Canada. A few years ago, the Canadian Government offered a bounty of \$3 per ton on pig iron made from Canadian ore, and \$2 per ton on that made from foreign ore. A bounty of \$3 per ton was also offered for steel ingots and \$3 per ton for puddled bar iron made from pig iron manufactured in Canada.

This bounty stimulated the building of iron furnaces, and large steel plants have been built or are under construction at Sydney, in Cape Breton, Hamilton, Sault Ste. Marie, Ontario, Collingwood, and a number of other places.

Mr. A. J. Moxham, general manager of the Dominion Iron and Steel Company, of Cape Breton, Nova Scotia, in a recent address gives figures to show that while it costs \$3.57 per ton of pig iron for assembling the materials for making steel at Pittsburg, the same materials cost only 79 1-2 cents at the Cape Breton mills and \$1.97 at the mills of the Lake Superior Power Company, at Sault Ste. Marie, Ontario.

#### Street Car Heaters in Germany.

Under date of February 11, 1901, Consul Warner, of Leipzig, reports that there is great need for electric heaters in the street cars of that city, the three electric street railways in and about Leipzig not having a single car which is heated, either by electricity or coal on the coldest days in Winter. Formerly, when horse cars were in use, they were heated by placing coals of fire in iron boxes; but, after several months' trial, the system was abandoned. It is not because there is no cold weather during the Winter months, says the Consul, that street cars in most of the cities of Germany are not heated, but because the city authorities do not compel the street railway companies to make their cars comfortable; and, unless required to do so by law, they will not put themselves to this extra expense. Mr. Warner urges the introduction of American electric street car heaters, but adds that, in order to meet with success, it will be necessary, first of all, to convince the authorities of the fact that the health of the general public is greatly endangered by riding in unheated cars during the Winter months.

**PATENTS** Preliminary Consultation Free.  
**HENRY J. MILLER,**  
 55 Equitable Building, BOSTON.

## REVIEW OF THE MARKETS.

**Wire Nails:** The excellent demand for Wire Nails continues in a decided manner. The mills are fully employed in filling orders already in hand, the feeling in the trade being that under present conditions it would seem as though some slight change upward in all probability would take place. Under the circumstances the orders sent to the manufacturers are fully up to the requirements. The quotations continue as previously quoted, f. o. b. Pittsburgh, terms 60 days or 2 per cent. discount for cash in ten days:

To jobbers in carload lots	\$2.30
less than carload lots	2.35
To retailers in carload lots	2.40
less than carload lots	2.50

New York prices are steady as previously quoted, the principal difficulty being to get a full supply of nails to satisfy the regular demand. This has a tendency to brace up the prices of small lots from store, which are now quoted at a slightly higher price, even for fair lots. Quotations are as follows:

To retailers, carloads on dock	\$2.53
Small lots at store	2.60

**Cut Nails:** The Cut Nail market is in excellent condition, the demand being fully up to the average for this season of the year, prices remaining unchanged, and the market in a firm condition. The following are the present quotations, f. o. b. Pittsburgh, plus the actual freight to point of destination, terms 60 days or 2 per cent. discount for cash in ten days:

Carload lots	\$2.00
To jobbers in less than carload lots	2.05
To retailers in less than carload lots	2.20

New York prices are fairly steady at the following quotations, an occasional irregularity being noticed in the price of less than carload lots on dock:

To jobbers in carload lots on dock	\$2.13
less than carload lots on dock	2.18
To retailers in less than carload lots on dock	2.36
Small lots from store	2.25

**Barb Wire:** The mills are exceedingly busy in supplying the demand for this desirable staple for this season of the year. The demand seems to come from every quarter, indicating that improvements are being undertaken, and the jobbing trade has every confidence in the future. Quotations are as follows, f. o. b. Pittsburgh, 60 days or 2 per cent. discount for cash in ten days:

To jobbers in carload lots, Painted	\$2.60
Galvanized	2.90
less than carload lots, Painted	2.65
Galvanized	2.95
To retailers in carload lots, Painted	2.70
Galvanized	3.00
less than carload lots, Painted	2.80
Galvanized	3.10

Ellwood and Baker Wire is 5 cents and Washburn & Moen Glidden 10 cents per 100 pounds higher than the prices above named.

**Plain Wire:** There is no cessation in the continued heavy demand for plain wire. This is so largely required by the manufacturers of the country in so many important departments of their specialties that more or less delay occurs in prompt shipment of orders of recent date. The market continues firm at the quotations which follow, f. o. b. Pittsburgh, terms 60 days, or 2 per cent. off for cash in ten days:

Base sizes.			
	Plain.	Galv.	
To jobbers in carload lots	\$2.25	\$2.65	
less than carload lots	2.30	2.70	
To retailers in carload lots	2.35	2.75	
less than carload lots	2.45	2.85	

The above prices are for the base numbers, 6 to 9. The other numbers of Plain and Galvanized Wire take the usual advances.

**Tacks:** Firmer and better conditions prevail in the Tack market than have been noticed in some time. The manufacturers realizing the necessity for stiffer quotations have withdrawn a number of the extreme extra discounts that have been obtainable during the last three months, and are now fully uniform on the discounts which we give below. These discounts show the revised quotations of the Shelton Co., Shelton, Conn., and 64 Reade Street, New York, and may be said to represent the extreme prices now prevailing in the Tack market:

	Discount.
Upholsterers' tacks	90 and 40 %
Bill posters' tacks	90 and 40 %
Gimp tacks	90 and 40 %
S. S. cut tacks	90 and 30 %
American cut tacks	90 and 25 %
Trimmers' tacks	90 and 30 %
Lace tacks	90 and 40 %
Looking glass tacks	70 and 10 %
Hungarian nails	80 and 15 %
Trunk and clout nails	80 and 5 %

**Bright Wire Goods:** The manufacturers of Bright Wire Goods announce a new list dated April first, which modifies to a considerable extent the discrepancies in prices which were complained of in the previous list, many of which have been made necessary by the quotations in the wire market. On the smaller sizes the changes are of lesser importance, but on the extreme large sizes, where the difference in cost of material is of greater proportion of the actual cost, the old lists are now out of proportion to the new. The new list has been adopted by the Associated Manufacturers as far as heard from, and discounts applying to the same from the various makers may be stated as 85 per cent., which forms the present market quotation.

**Wire Cloth:** The demand for Wire Cloth seems this year to be fully as heavy as any previous season; in fact, in the opinion of some, it is in advance of the usual requirements, the result of the existing conditions which have been brought about by the large orders from the jobbers and manufacturers. The ruling quotation may be named by \$1 to \$1.15, which represents the market. As difficulty exists in obtaining as full a supply as the jobbers would like to have, it is reasonable to suppose that this price will at an early date be quoted at still higher figures. This month will be an unusually heavy one for sales for the retail trade.

**McKinney Mfg. Co.**—McKinney Mfg. Co., Allegheny, Pa., under date March 15, announce the adoption of the revised list prices on Strap and T Hinges, which were published in our last issue.

**Cordage:** While the demand for Rope is now an eager one, being about the average for the season, the price continues as previously quoted by us. The market is in good, healthy condition apparently, and but little speculation is noticeable in the quantities required. We give herewith the quotations as now existing, conveying a satisfactory idea of the condition of the market:

	Pounds.	Cents.
Manila, 7-16 inch and larger	10½	
¾ inch	11	
¾ inch and 5-16	11½	
Sisal, 7-16 inch and larger	8	
¾ inch	8½	
¾ inch and 5-16 inch	9	
Lath Yarn, medium and coarse	7½	
Jute Rope No. 1	6½	
No. 2	5½	

**Binder Twine:** The market on Binder Twine is maintained on a basis of prices that have been regular for the last two weeks. The demand is a satisfactory one, but without any speculative feeling, the general supposition being

that as the demand increases, the prices will show some advance. We quote as respecting the market. General quotations are as follows for small lots of Twine, with a rebate of 1-4 cent per pound for carload lots, f. o. b. Eastern factory:

White Sisal, 500 feet per pound.....	8c.
Standard, 500 feet per pound.....	8c.
Manila, 600 feet per pound.....	9½c.
Pure Manila, 650 feet per pound.....	10¼c.

**Linseed Oil:** The Dean Linseed Oil Co., under date of March 15th, 1901, quote as follows:

In lots of less than 5 barrels.....	62 cents per gallon.
In lots of 5 barrels or more.....	61 cents per gallon.

The five-barrel price only applies to deliveries of that quantity at one time.

Bolled Linseed Oil, 2 cents per gallon higher than Raw.
Calcutta Oil, 85 cents per gallon.

#### THE PHILADELPHIA TRADE.

The first of April is "settlement time" in Eastern Pennsylvania, when the farmers make an effort to settle up their affairs of the previous year, and outline new operations, and collections show this to be the case this year, while the volume of orders is keeping up very nicely, despite the muddy condition of the roads and the generally unfavorable weather. We hear hopeful reports as to future prospects, and, with the advent of Spring and warm weather, a large volume of business may be expected.

Prices are daily growing firmer—many goods which are near the raw material have already advanced, and there seems to be no indication of weakness whatever. The market is apparently almost entirely in the hands of large steel corporations, and it seems but reasonable to expect a maintenance of prices for some time.

The recent advances have included Strap Hinges, Wrought Butts, Trace Chains, Window Glass, Oil Cans, Tacks, Wire, etc., and almost daily the mails bring reports of further advances. BIDDLE HARDWARE CO.

#### THE BALTIMORE TRADE.

There appears to be a very healthy and general demand for seasonable goods, with marked improvement in collections, and we at present have our hands full. Most jobbers realizing that the market conditions, as well as trade demands, favor the carrying of large stocks, they have purchased so much that many manufacturers are very far behind in deliveries.

Poultry Netting, Barbed and other Wires and Wire Nails have been quite scarce in Baltimore for the past two weeks, and unless relief comes soon on these goods, there will likely be a panic in this section.

Barring disappointment and confusion in consequence of delays in deliveries of fortunately only a few articles, trade is as good as could be desired. H. W. WEBB & SONS.

#### THE BIRMINGHAM TRADE.

Since writing you, there has been some falling off in the volume of trade. Some lines continue active, while other lines of goods are lighter, so as to affect the aggregate result. There is a good demand for building material, which has been accelerated somewhat by the recent storm which passed through our city. Our city is also having much work done in the way of putting down sidewalks, grading out and paving streets, building sewers, etc., which is giving employment to many men, and keeps the money circulating actively.

The recent decline in cotton has somewhat checked the orders of the agriculturist and those who depend upon them for trade. It is to be hoped that some lessons have been learned from the unpleasant experience of recent past years resulting from too much surplus, and making only one crop and buying other supplies, and that they will henceforth vary their crops.

We have one of the best sections of our great country, and the purchasing power of our people is much ahead of what it

was a few years ago, which is a reason for congratulation.

We will be glad to see the world at peace again, and the trade in the far East restored to its normal condition, when we will be more hopeful that our export trade will be permanent. When we look at the balance of trade now in our favor and consider that if we should collect this in cash and bring it home, it would disturb the finances of our customers and place them where they would not be in good condition to continue to buy, and about the best thing will be to loan the balance and start our country out as a creditor nation; but if they continue to sell for paper, will not a time come when they will have to stop buying and thus shut off our export trade? MOORE & HANDLEY HARDWARE CO.

#### THE PITTSBURGH TRADE.

Business continues very good. Mail orders are frequent and of good size, while travellers find a welcome and orders waiting for them.

Bad country roads hold back the business of places off the line of railroads. Properly improved roads would add about three months to the business year of all such places. Something in this direction may be done by our legislature now in session.

Retail merchants are slow to realize the condition of the market in heavy goods; cannot believe goods are advancing. However, as prices promise to hold firm for at least several months to come, all will have to come to it sooner or later.

Prices advanced as they are at present by the great demand, cannot afford a cause for complaint against the great combines. A more favorable time for launching the great enterprise could hardly have been selected.

LOGAN-GREGG HARDWARE CO.

#### THE CLEVELAND TRADE.

Legislation to prevent trusts, so far as it relieves citizens from vigilance in the business of life, is not desirable. Legislation to make prudence unnecessary means degeneration. It attempts to give success to the unfit and invites all to the low level. Somebody has said that men are as lazy as they dare be, and legislation to encourage indolence is of doubtful value, as it tends to deprive industry of its stimulus. Industry is the mother of morality; civilization is the fruit of activity, not repose. The penalties attached to indolence and vice are as beneficent as reward is for industry and virtue. If we can stand the strain of intense activity of these times, the work of regeneration will go on rapidly, but all that are born tired will complain, and some of them will fall out of the ranks. Nevertheless the crowd will advance. The business of the country has been built up by competition; we are not yet in condition to dispense with it. Things move too rapidly for the comfort of some of us, but all who move with them are benefited. If, however, the activity in business continues to increase, working hours should be lessened, as there is a limit to human endurance. To get rich and retire from business, giving time and money to the public, is the ideal emphasized by Mr. Carnegie, which it is hoped many will follow. If they do, the greatness of this country will be assured.

Trade is remarkably good and houses that are in condition to furnish goods promptly are fortunate, and so are their customers. The difficulty of filling orders is far more serious than getting them; both retailers and jobbers are losing sales because they cannot get goods, and yet they complain, and some of them vote the Democratic ticket to rebuke the Administration.

THE LOCKWOOD-TAYLOR HARDWARE CO.

#### THE SAGINAW TRADE.

Trade for the month of March greatly exceeded our expectations. The weather was cold and snowy, and roads were generally bad, but, nevertheless, the volume of business was very large. Generally speaking, collections are good, although this is the season of the year that country merchants are asking for accommodation. The outlook for

# THE ARCADE FILE WORKS

NICHOLSON FILE CO., PROVIDENCE, R. I.

business is very bright indeed. Local labor differences have practically been settled, and a large amount of building is contemplated. Coal miners and operators have made satisfactory arrangements for the season, and three new coal shafts are being sunk. The sugar beet industry is growing rapidly, and several new factories are organizing.

MORLEY BROTHERS.

### THE COLUMBUS TRADE.

Here it is April 3d, and still we are having ground hog weather. It is fortunate from one standpoint, for had we fine weather, there would be no end to the kicks about slow shipments. Even with disagreeable weather, it is impossible to keep up with orders. Trade is exceptionally good. Manufacturers are very slow filling orders, and transportation companies are also slow in delivering shipments. We have a shipload of Japanese fish poles which left China in September, and the vessel has not arrived at New York yet. Fish are no doubt waiting for an opportunity to nibble at a good fat worm, and there are plenty of tired-out men ready to offer the opportunity, and no poles. This is about as sad a catastrophe as we can imagine. Our sympathy is with the fishermen.

The outlook for an excellent business is certainly flattering, and will be realized, unless manufacturers get gay again and put prices up so high that people will begin to curtail in their buying. It looks very much as though that were going to happen on some lines, and those lines will affect other lines seriously. Glass has advanced nearly 50 per cent. That is enough to keep many a building from being erected, and whenever glass interferences with building, it affects all kinds of Builders' Hardware and tools. There is a threat from the Carpenter's Union in our city of a strike, unless their demand for 40 cents per hour and eight hours per day is conceded. More building permits have been granted so far this year than during the past two years combined; but many a projected building will not be built, if the carpenters insist on their terms. Talk about combinations of manufacturers, they are mild compared with labor combinations.

Galvanized ware of all kinds is advancing steadily, and it looks as though tinware will be higher. Chain takes a hitch up every few days; also bolts and many other articles. The demand for Fence Wire is good, and more Post Hole Diggers have been sold this Spring than usual. Farmers quit building fences in 1898, and have held off as long as they could, but evidently they have decided that prices are to remain as high as they are now for some time, and they are improving their farms. As a rule, farmers are in good shape financially. The cashier of a bank in a small country town said their deposits were \$165,000, and mostly from farmers. This

is certainly a very satisfactory condition for farms to be in. Money seems to be plenty, and still collections are not what they should be. Too many merchants are afraid of offending their customers by asking them for settlement. There is no doubt they all have plenty of customers who owe them that have money idle in the banks. We know from past experience that a great many farmers will get credit when they have plenty of money in their pockets. They think they may have a chance to buy a heifer, calf or a pig, or loan a neighbor money and make a few dollars, and the merchant can wait, and the merchant must make the jobber wait, but the manufacturer won't wait. We had a customer who was considerably behind with his account, and in answer to our urgent demand for money, he wrote us he was carrying a number of customers for good-sized amounts, and until he could get payment from them, he could not pay us. We answered him that he was greatly mistaken when he said he was carrying his customers, that it was we who were carrying them, not him, and told him he had no right to trust out other people's property. In other words, if he did not have capital enough to carry his customers, he should not trust them; that it was unjust for him to sell other people's goods to Tom, Dick and Harry on credit, and then ask us to wait their leisure in paying for them; but this is the way some merchants do, and if their customers don't pay, the merchant don't pay. There is too much business done on other people's capital.

THE SMITH BROS. HARDWARE CO.

### THE CHICAGO TRADE.

We are pleased to advise that we are busier than ever. The volume of orders that is pouring in daily is something enormous, and we have no fear whatever of a let up, but feel that matters will be very much the other way. The markets on all lines appear firmer each day, and advances that were probable some ten days or two weeks ago, have materialized, with possibilities of still further advances on the same goods in the very near future. There is a growing scarcity of goods, and we are experiencing more trouble every day in having our orders shipped promptly from the different factories, notwithstanding the fact that our specifications have been placed months ago. While goods, such as Wire Cloth, Netting, Screen Doors, Refrigerators, Lawn Mowers and the like, are going out in large quantities, the regular line of Shelf and Builders' Hardware is by no means being slighted, or overlooked. In fact, everything that there is now the least sale for is being ordered very generally, therefore the increased sales are being pleasantly felt all along the line. We are inclined to believe that within a very short time it will not be so much a matter of price, but a question of getting and furnishing the goods.

WELLS & NELLEGAR CO.

## THE DAVENPORT TRADE.

Weather continues horrid, and the roads are well nigh impassable; but notwithstanding these unfavorable conditions, trade is remarkably good.

Prices are firm in most lines, and in many are slowly, but surely, advancing. There are, it is true, a few cases where prices have climbed to the sky parlor, and are evidently attempting to get on to the roof.

The great monopolists of the country have added stoves to their lines, and the Hardware jobber has received another rap over the knuckles. When and how will this deplorable condition, arising from vast aggregations of wealth, cease to tyrannize and impoverish small, but legitimate, commercial enterprises?

SICKELS, PRESTON & NUTTING Co.

## THE ST. PAUL TRADE.

It looks at last as though Spring has arrived. We have had a very mild Winter, with but little snow, and hardly any extreme cold weather, such as we usually have. The farmer is already thinking of sowing wheat, and the young girl is thinking about her Spring hat. The Hardware merchant has his head filled with thoughts of his Spring stock, and that means that we are already sending out much poultry netting, barbed wire, etc. In fact our business at the present time, and for several weeks past, has been very good, and it looks as though the poor crops of last year had not dampened the ardor, and lessened the purchases of our customers; then, too, everybody expects that the American Steel and Wire Co. will advance prices, and all want to get under cover before the advances take place. We, ourselves, feel and believe that good conditions will exist for some years, though we do not admire such imminent trusts.

C. W. HACKETT HARDWARE CO.

## THE SAN FRANCISCO TRADE.

So much is being said and printed now-a-days about the great steel trust, that *Hardware's* San Francisco correspondent is reminded that Steele is the family name of a ten-year-old Willie boy whose widowed mother kept "our house" last Summer. Also that the lad Willie was then ticketed to Colusa County, to there spend a month of his vacation with an aunt, receiving from his mother parting instruction as to how to dress in this notably hot weather county of the interior. After Willie had been away a week, he sent this letter home:

"DEAR MAMMA:—It's not too hot, nor it's not too cold; it's just right."

And so it may now be recorded of present trade and weather conditions in San Francisco; everything is "just right," and no complaints are being heard from any quarter, barring the solitary "kick" noted in the next paragraph, merchants, as a rule, reporting everything satisfactory, commercially. Funds continue plentiful and readily accessible to solvent borrowers, and collections are as good as they ever are.

Last month, in the March 10th issue of *Hardware*, there appeared in this correspondence a brief notice of a new Hardware department attachment to the long-established stove and range house of Seller Bros. & Co., to be presided over by Charles Watts, late manager of the Alexander-Yost Co.

Responsive to a request note sent Mr. Watts for trade news notes for this letter, he kindly contributed as follows:

Trades Press Association:—Many thanks for notice in *Hardware* of March 10. We have received some catalogues from it, and hope to receive others from those who have not responded. In regard to news, I have not much outside of our own store, except in making purchases for our retail department I find the trade here short on several lines of staples, such as good tools, although they seem to have a large stock of some lines on hand and doing, I am informed,

The demand which we have created for this excellent wood finish makes it a most profitable article for hardware dealers to handle.

**JAP-A-LAC** is the best finish on the Market for  
FLOORS AND INTERIOR WOODWORK.

Women all over the country are buying and using it. Put in a line of JAP-A-LAC and add to your revenue.

We have a very attractive proposition for dealers.

The Glidden Varnish Co.,  
CLEVELAND, OHIO.

a large business. This, however, is the case with some of the Eastern houses, so I suppose trade is brisk with the manufacturers.

I am getting along with the fitting up of the store, and expect to be ready for business in about two or three weeks. Just received 600 drawers for small stock, and will commence to sample goods on them at once.

I shall be a very busy man for some time. I am at present making out price lists, and would like to register my "kick" with the many others gone before. Why do manufacturers and jobbers make lists and discounts so outlandish that the man of all work (and a large number are such in small stores), has to puzzle his brains figuring out the net cost of tacks at \$1.15 per dozen, 90 and 4 tens off, and so on down the line with the one thousand and one manufacturers with their 27 1-2 and 5 and 10 and 2 1-2? I don't think it would be wise to do away with lists and discounts altogether, but I do think they could be modified so as not to be so complicated, and thereby taking up much valuable time that is required by the ordinary business man in finding out cost of his goods, or he does not do it at all correctly. Hoping to see this change before long, I am, respectfully yours, Chas. Watts. TRADES PRESS ASSOCIATION.

## Case-Hardening Iron and Steel.

The case-hardening of iron or steel really consists of two processes. First, the surface of the piece, whatever it may be, and so on to a greater or lesser depth, depending upon the process employed, is changed very definitely from iron to steel; then this surface is hardened as any steel is hardened. There is surprisingly little difference as between iron and steel—that is, between a bar of good iron and a bar of steel—so far as the constituent parts are concerned; yet this little difference constitutes the important distinction between something that will "cut like a razor" or that may be tied up in a knot, like a whip lash.

The first process in what will always be called case-hardening is the supplying to the iron—the surface of the piece under treatment—what it lacks to make steel of it; otherwise it will not harden. The principal thing to be supplied is carbon, one of the most common of all substances. Cast iron is made up generally of not less than 3 per cent. carbon. For the purpose of converting this into wrought iron, an essential part of the process consists of getting rid of the carbon—burning it out. In the process of converting the wrought iron into steel, some of the carbon must be restored; the wrought iron must be recarbonized. In the first process of case-hardening the surface of the wrought iron is kept in intimate contact with something that will supply the carbon to the iron when the latter is at a fairly high temperature.

THREE-BAR LEATHER  
shoe-soles and top-lifts (for heels) are the best.

Write us; we'll give you points.

Baxter Schenkelberger & Co,

350 Congress street, Boston.

For case-hardening superficially—that is, for converting into steel a thin film of the iron only—the operation is all in the open air, which makes it imperfect in every respect. Prussiate of potash is very commonly employed. If the piece is well polished and reasonable care is taken, a fairly fine mottled gray surface is obtained. When the process is employed for small pieces at frequent intervals, the potash may be kept in any suitable iron vessel. The piece to be hardened is dipped into this and stirred about, an old spoon being used to keep it covered with the potash. When the piece cools somewhat, it is again heated slowly, the potash adhering to it, and when hot again treated with the potash, then heated as for tempering a piece of steel and plunged into water. The heating and covering with potash may be repeated three or four times, or more, if a little deeper hardening is desired.

Where case-hardening to a considerable depth is desired, the pieces are packed in a suitable iron box or pot, along with equal parts of charcoal, pulverized bone, and leather scraps. Or, instead of this, saltpetre and leather may be used in the proportion of one pound of the former to eight pounds of the latter. First, a layer of the mixture is put in the bottom of the box, upon which a layer of the pieces to be case-hardened is carefully placed so as not to touch one another or the sides of the box. Over this another layer of the mixture is placed; then another layer of the pieces, and so on till the box is filled. The cover is then put on and the joint luted with clay to exclude the air. The box and its contents are then kept at a red heat for from three to five hours longer, according to the depth it is required to harden. It is then uncovered and the contents dumped into a tank of clean, cold water, with the least possible exposure to the atmosphere.—*Exchange*.

#### Some British Ideas of Blacklead.

The New York *Sun* says that in a case settled in England some time ago the Recorder was brought up short by a phrase used by the counsel for defence, who spoke of a transaction concerning a pound of "blacklead." This is a common and useful article, but the counsel, on being asked to explain its nature, said it was a black substance used for boot polishing. The Recorder thought it was a mineral used in lead-pencils, but another barrister asserted it to be a "tough kind of lead used for roofing houses." The case was brought to a standstill, and one lawyer, unsurpassed in legal knowledge, declared that blacklead was a slang term for pig-iron, as produced in the North Country! A fourth expounder of the law vaguely suggested it was the opposite of white lead; and, finally, a domestic servant put the court right, and the assembly at last learned that it was used for blacking stoves.

It was the first time Miss Pertie Goodwin had ever seen the inside of a sculptor's studio.

She noted his clay-stained blouse and soiled hands, and glanced briefly at the figure of a horse he was modeling.

"Gracious!" she said to the friend who was showing her about. "What won't some people do to make a living!"—*Chicago Tribune*.

Father (meaningly)—Who is the laziest boy in your class, Tommy?

Tommy—I don't know, pa.

Father—I should think you should know. When all the others are industriously studying or writing their lessons, who is it sits idly in his seat and watches the rest, instead of working himself?

Tommy—The teacher.—*Glasgow Evening Times*.

### New Incandescent Lamp In Norway.

Under date of February 23, 1901, Consul-General Guenther, of Frankfort, says:

It is reported that Ch. Petersen, of Christiania, has constructed a new incandescent lamp, which is of interest on account of its peculiar arrangement. For the radiation of light, a conductor of the second class, which conducts electricity only when heated, is used, the same as in the "Nerst" lamp. The conductor in this new lamp, however, is not a thread, but a small rod, which is brought to a white heat and thereby emits light. Around this "second-class" conductor a thin metal wire of good conductivity is wound, which is connected with the current conductor by equaliz-

ing resistors, which serve the purpose of heating the second-class conductor and increasing the resistance of the current. The second-class conductor takes up the greater part of the current. This arrangement results in a great saving of the electric power, which about equals that of a Nerst lamp, but yields a considerably stronger light.

First Little Girl—Oh, you told a lie. You'll go to hell if you tell lies.

Second Little Girl—Hell! Where's that?

"What! You a good Methodist and don't know where hell is?"

"No, I don't. They don't teach geography in our class."—*Life.*

### "Bright & Newsy."

Biddle Hardware Co., Philadelphia, Pa. [*General Hardware and Bicycles*]: In season and out, we have claimed that the Hardware trade was the proper medium for the disposal of bicycles and bicycle sundries throughout the country, and our opinion on this point is so well known, that it does not seem as if we could strengthen it materially by saying it again. Of course large cities may be able to support a few exclusive bicycle men, but in the majority of towns and cities throughout the country the man must have other business in order to make it pay. We appreciate the fact that from the first **HARDWARE** has held the same views, and we think they have been fully justified by the trend of events. **HARDWARE** is always welcome in our office, and its bright and newsy columns are often a relief amid the cares of business.

## UNION HARDWARE CO.

TORRINGTON, CONN., U. S. A.

New York Office, 95 Chambers Street, in charge of TOWER & LYON.

ALL CLAMP RINK SKATE.

No. 9.

EXTENSION—"ONE SKATE FOR ALL SIZES."

Pat. April 11, 1899.

### Roller Skates.

MOST COMPLETE LINE.

FINEST FINISH.

BEST QUALITY.

STRONGEST.

GENUINE HEMACITE ROLLS.

### OUR RINK EXTENSION SKATES

Are New and Up-to-Date, and combine all the latest improvements in materials, designs and ideas and are in advance of any other skate on the market. The tops, trucks, clamps and stampings being made of the best cold rolled Swedish steel, insures fine appearance and strength. Trucks are oscillating, with best rubber cushions, and turn in three-foot circle. Clamps are made under patent of April 11, 1899, are neat, easily removed for repairs, cleaning or side adjustment, and will hold to shoe like a vise.

We Manufacture a COMPLETE Line, both for Sidewalk and Rink. Plain and Ball Bearings.  
Send for Catalogue.

### New Hardware Stores.

Afton, N. Y.—Clark L. Horton, Maple Street.

Ballinger, Tex.—The Hall Hardware Co. has been incorporated with a capital stock of \$30,000.

Bradford, Pa.—Geo. F. Guy, Washington and Main Streets.

Cambridge, O.—The Orme Niel-Thompson Hardware Co. has been incorporated with a capital stock of \$25,000.

Cleburne, Kan.—Vilander & Fosberg.

Cobden, Ont.—Gilbert A. Adair.

Dickson, Tenn.—W. T. Anderson Co. is the style of a newly incorporated Hardware firm, which has begun operations here, the incorporators being W. T. Anderson, V. B. Miller, J. S. Johnson, W. T. Andrews and Pitt Henslee. The official members are: W. T. Anderson, president; J. S. Johnson, secretary and treasurer; W. T. Andrews, store manager.

Geneseo, Ill.—J. J. Ryan.

Greenwich, N. Y.—E. M. Crandall.

Mazeppa, Minn.—John Pesheck.

Quitman, Ga.—Joiner & Whaley.

Seattle, Wash.—The Rainier Hardware Co. has been incorporated with a capital stock of \$18,000.

Sunbury, O.—The Pace & Miller Co. has been incorporated with a capital stock of \$10,000 to carry on a general mercantile business in Hardware, farm implements, etc. Incorporators are: J. W. Pace, H. R. Miller, Fred D. Miller, John B. Miller and Addie B. Paul.

Talladega, Ala.—Lyman Chardy.

Tampa, Fla.—The Foley Plumbing & Hardware Co. is a new corporation asking for a charter in this city. It is incorporating with a capital stock of \$10,000, and proposes to do a general business in its line. The incorporators are named as John Foley, J. Allet Rankin and E. R. Prince and others.

Washington, Ia.—Articles of incorporation for the Nicola Hardware & Furniture Co. have been filed. The corporation has a capital stock of \$6,000.

Winter Harbor, Me.—Milton Jordan.

### Changes and Improvements.

Bemidji, Minn.—J. W. White & Co. have sold their large storeroom to McClennan & Graham, Hardware merchants.

Bloomington, N. Y.—James Green and Alfred Owen have taken the tin and Hardware business, formerly run by McKinney & Ward, of Pine Bush.

Bryant, S. Dak.—E. S. Dunn & Co. have purchased the Hardware, implement and harness business of Underwood & Cole.

Clare, Mich.—David Ward, of Vernon, has purchased J. R. Goodman's stock of Hardware and has taken possession.

Conde, S. D.—W. W. Rounds has sold his stock of Hardware.

Goshen, N. Y.—James H. Conklin has purchased the Coe S. Goble tin and Hardware business at Westtown and taken possession.

Harrietta, Mich.—S. J. Doty is closing out his Hardware business.

Jefferson, O.—Walter Kellogg is enlarging his Hardware building.

Lawrence, Mass.—The Treat Hardware Co. has purchased the stock of the late John Glidden, whose place of business was at the corner of Amesbury and Valley Streets.

Mason, O.—W. N. Cox has purchased the Hardware store of J. S. Evans and taken possession.

Mayfield, Ky.—T. J. Carman & Co., Hardware, have recently succeeded C. R. Allen & Co.

Ravenwood, Mo.—Proctor & Proctor have the material ordered and part of it on the ground for a new addition to their Hardware store on the south. The building will be 22 x 80 feet, brick foundation, and corrugated steel siding.

Rochester, N. Y.—Extensive alterations have just been made in the builders' Hardware and manufacturers' supplies department of Matthews & Boucher's Hardware store in Exchange Street.

Shickshinny, Pa.—J. D. Woodworth & Co. have purchased the Hardware store of T. H. Doan at the old Campbell stand and will conduct a first class Hardware store.

Tempe, Ariz.—F. W. Holsapple has sold his stock of Hardware and wagons, buggies and farm implements to the Tempe Hardware & Supply Co. This concern has also bought out the Bicycle Electric Plumbing Co., and will continue the joint business as heretofore in the Odd Fellows' building.

### Business Embarrassments.

Clarksville, Tenn.—J. F. Wood & Co., dealers in Hardware, have made an assignment for the benefit of their creditors equally, none being preferred. The assets and liabilities are about equal, and it is thought that all creditors will be paid in full.

Newburgh, N. Y.—James Bennett Quinlan, the Hardware merchant at 128 Water Street, has made a general assignment without preference, for the benefit of his creditors, to Supervisor Henry B. Lawson. Mr. Quinlan's liabilities amount to between four and five thousand dollars, and his assets are upward of \$4,000.

Pennsgrove, N. J.—Edward G. Brick has made an assignment to David D. Leap.

The liabilities amount to \$14,000, but Mr. Leap thinks the assets will amount to as much.

Provo, Utah.—Lewis D. Watters and Thomas Erros, doing business as Hardware merchants in this city, have made an assignment for the benefit of their creditors. John B. Forbes, of Salt Lake, is assignee, and the liabilities aggregate \$2,374.67.

Rockland, Me.—The Lamson Hardware Co. has made an assignment to E. B. McAllister and C. E. Meservey, of this city, and A. H. Graves, of Boston. The company was incorporated in June, 1900, with F. I. Lamson as president.

### Fires in Hardware Stores.

Aplington, Ia.—Jas. E. Arenbo. Loss, \$8,500; insurance, \$2,600.

Arcadia, La.—Wakeman & Booth.

Armada, Mich.—S. B. Anderson. Loss, \$5,000; insurance, \$3,000.

Armourdale, Mo.—W. H. Plank. Loss, \$3,500; partially insured.

Bells, Tenn.—Clark Hardware Co.

Bowerston, O.—J. A. McKean.

Dauphin, Ont.—Turner's Hardware store. Loss, \$300; fully insured.

Frazeysburg, O.—M. A. Lemert. Loss, \$4,000; insurance, \$500.

Hersey, Mich.—O. L. Williams. Loss, \$200.

**MILLER LADDER CO.**

204 Orleans St., Chicago, Ill.

The "Miller" is a radical departure from the conventional style of step ladder. It has an individuality entirely its own which has won for it recognition as the standard ladder in the decorating trades.

## HARDWARE MANUFACTURERS' RECORD.

Hardware manufacturers over the country, are requested to contribute to this page. News of new factories or companies, changes, improvements, etc., will be gladly received, and promptly published.

### New Companies, Etc.

**Birmingham, Ala.**—Birmingham is to have a new industry, which will be in operation somewhere on the Southside within the next thirty days. It is to be known as the Eclipse Mfg. & Plating Co., and will manufacture grates and mantel Hardware, in addition to plating. The principal stockholders are K. F. Dunlap, formerly of Macon, Ga., and F. N. Andrews.

**Clayville, N. Y.**—The machinery for the new wire works of Babbitt & Richards is now all in place and has been tested and business has commenced.

**Cleveland, O.**—The Consumers' Gas Stove & Fixture Co. has been incorporated with a capital stock of \$10,000.

**Columbus, O.**—Belcher Mfg. Co., which will manufacture tools, has been incorporated by H. P. Ranney, J. G. Bettcher, J. Henry DeCumbe, M. E. Zimmerman and F. W. Langin. Capital stock, \$10,000.

**Hartford, Conn.**—The Booth Mfg. Co., with Hobart Booth at its head, is a new enterprise for the manufacture of wire goods specialties. Mr. Booth was formerly one of the foremen of the E. N. Welch Clock Co., of Forestville. The company has equipped a heretofore unused factory building with machinery valued at \$20,000, and will soon begin the manufacture of hooks and other articles.

**Johnstown, Pa.**—The Cambria Foundry & Machine Co. is ready to begin the manufacture of shovels at its plant on Davis Street. The new building has been completed and all the machinery needed for the manufacture of all kinds of shovels has arrived and is being installed. The capacity of the plant will be sixty dozen shovels a day. The Cambria Foundry & Machine Co. was organized the early part of last Fall and purchased the plant of Charles L. Tittle, of Blairsville, which has since been greatly enlarged. The capital is at present \$30,000, but it is soon to be considerably increased. The charter was obtained by Messrs. N. B. Griffith, John N. Horn, Harry M. Benshoff, Alfred J. Gairing, and George A. Hager.

**New Castle, Pa.**—The American Hardware Mfg. Co. has been organized with a capital of \$100,000 for the manufacture of all kinds of brass electrical supplies. The company is composed almost entirely of local capitalists. The plant of the Keystone Plow Co. has been secured, and will at once be remodeled. The following are the stockholders of the company: George W. Johnson, Charles H. Johnson, Charles Matthews, John B. Brown, George W. Hartman, Charles J. Kirk, W. L. Johnston, Thomas H. Hartman, Robert K. Aitken and E. S. Whiting. The company will employ about 150 men at the start, and it is ex-

pected that the works will be rapidly extended.

**New York, N. Y.**—J. L. Thomson Mfg. Co. has been incorporated to manufacture Hardware specialties; capital, \$1,000. Directors—J. L. Thomson and Catharine M. Thomson, Clayton; C. O. Le Count, New York City.

**Pittsburgh, Pa.**—The Pittsburgh Shovel Co. has been formed at Pittsburgh with a capital of \$100,000 and has leased the American Sheet Steel Co.'s plant at Leechburg, expecting to begin operations there about July 1 and running independent of the Trust. W. L. Walker, of Leechburg, is secretary of the new company.

**New York, N. Y.**—Enterprise Gas Stove Mfg. Co. has been incorporated. Capital \$50,000, and the directors are: Charles Lederhos, Philip Lederhos and E. F. Curley.

**Oklahoma City, Okla.**—The articles of incorporation for the Bandy & Prince Mfg. Co. have been filed with the secretary and a charter issued for a period of twenty years. The purpose of the company is to manufacture hay presses and other machinery. The capital stock is \$20,000. The incorporators are David H. Bandy, Burton W. Prince and Richard L. Jarvis, all of Oklahoma City.

**Ottumwa, Iowa.**—It has been decided that a company known as the Nichols Mfg. Co. will locate here and begin the manufacture of the Nichols square, a newly patented carpenter's tool, as soon as machinery can be put in place. Mr. Nichols is in Bridgeport, Conn., where he has purchased the machinery of the Bridgeport Power Co., and is now packing it on cars for transportation here.

**Toledo, O.**—The Buckeye Screw Co. has been incorporated; capital stock, \$50,000. Incorporators—S. R. Maclaren, H. C. Sprague.

**Toledo, O.**—The Toledo Chandelier Mfg. Co., with a capital stock of \$10,000, has been incorporated by Charles W. Klauser, William Lindley, William D. Dippel, Fred J. Miller, Otto Thum and William J. Loeffler.

**Trenton, N. J.**—L. W. Ferdinand Co. has been incorporated with a capital of \$50,000 to manufacture Hardware. Incorporators—Louis W. Ferdinand, Jersey City, N. J.; Charles T. Woodman and Stephen Bradford.

### Changes and Improvements.

**Reading, Pa.**—The Reading Hardware Works have just completed a four-story annex, which will be put into operation during the coming Spring. Several new features will be added to the line of goods manufactured and a number of more hands employed.

**Reading, Pa.**—The Reading Wood Pulley Works, at the southeast corner of Eleventh and Muhlenberg Streets, will be considerably enlarged. Plans are now being prepared by Architect George L. Gerhard.

The entire plant will be covered with an additional story and the rear of the building will be increased in size. The business of the firm necessitated the change.

**Richmond, Va.**—The Richmond Stove Co. has practically completed the details of the purchase of the mammoth building owned and occupied by W. T. Hancock as a tobacco factory. The plan is for the stove works to purchase and occupy the entire building, which fronts on Main Street all the way from Twenty-fifth to Twenty-sixth Streets.

**Waltham, Mass.**—The Pittsburgh Reduction Co. have purchased the entire stock, machinery, etc., of the Hill, Whitney & Wood Co., manufacturers of all kinds of aluminum ware. The change took place on the first of the present month. It is not the intention of the new owners to remove the aluminum plant away from Waltham immediately, but it will eventually be removed to Pittsburgh, Pa., where the new proprietors have their factory. While the plant is continued here it will be conducted under the original name of Hill, Whitney & Wood Co.

**Warren, Pa.**—The Warren Axe & Tool Works on the East Side are preparing to make additions for the enlarging of the capacity of their plant. The improvements as contemplated will give the company an output of a finished product about one-third larger than at present. A new addition will be built on the plant and more machinery added giving opportunity for the employing of more men.

**Woodbury, Conn.**—An industry abandoned fifteen or more years ago is to be revived in North Woodbury. Suckley & Wolfe, a firm made up of Woodbury and Bridgeport men, have leased the old shear factory in North Woodbury and will soon begin the manufacture of pocket and table cutlery.

### Recent Embarrassments.

**Royersford, Pa.**—The Schuylkill Valley Stove Co., of Spring City, has made a general assignment to George D. Peters. The assets are \$75,000 and the liabilities \$30,000.

**Syracuse, N. Y.**—The Manufacturers' Supply & Tool Co. have made a general assignment to Arthur Beebe. The liabilities of the company are estimated at \$10,000 and the assets at \$17,000.

### Recent Fires.

**Akron, O.**—The mower and reaper factory of Sieberling & Miller at Doylestown has been burned, entailing a loss of \$50,000 and throwing 100 men out of employment. Insurance, \$20,000.

### Miscellaneous.

The annual meeting of the stockholders of the March-Brownback Stove Co. was held in the company's office on South Street. Following directors were elected: Franklin March, T. J. March, James Rogers, A. K. Shaner, M. W. Baily, Dr. J. E. Porter and James Brownback.

# You Can Sell It!

SARGENT'S GEM FOOD CHOPPER is an article for  
kitchen use, intended to take the place of chopping bowl  
and knife. It is carefully made and nicely tinned; self-  
cleaning and self-sharpening, with steel cutters that  
cannot break.

Chops all kinds of meat, both raw and cooked, fruits  
vegetables and other articles of food. Chops quickly, quietly and easily;  
is easy to take apart, easy to put together, easy to adjust.

## Columbian 1000-Shot Air Rifle.

Patented  
Oct.  
24, 1893.

CHAMPION  
MODEL.

This Air Rifle possesses advantages over all the Air Rifles now  
on the market. The materials used in its construction are  
the best. The appearance and workmanship is far ahead of  
any other Air Rifle made. It has an adjustable sight it shoots stronger  
and more accurate, less liable than any other to get out of order, all  
parts are interchangeable. We think we have the right to claim this as  
the "Champion" of all Air Rifles. List, per doz., Enameled, \$30.00; Full Nickel, \$42.00.

Write for Discounts to Trade.

# MORRILL'S

**Saw Sets, Bench Stops, Punches, Cutting Pliers, and Seal Presses.**

## MORRILL'S MASTER-PIECE No. 95.

The revolving anvil with indicator sub-divided is marked with figures, the figures showing the number of teeth to the inch in the saw to be set; for example if the saw has four teeth to the inch, turn the anvil until the figure 4 comes up directly in front of the plunger, and so on.

## MORRILL'S No. 1 IMPROVED.

Known as the New No. 1 Saw Set

For Hand, Band and Jig Saws, from the widest made down to  $\frac{1}{8}$  inch. The sets are too well known for me to enlarge on them.

## MORRILL'S No. 3 and 4 SAW SETS.

No. 3, Cross Cut and Circular, single tooth, from 14 to 20 gauge. No. 4 Cross Cut M and Champion Tooth, from 14 to 20 gauge.

## MORRILL'S No. 5 SAW SET.

15 Inches in Length.

For Timber and Board Saws from 6 to 14 gauge. The size of the saw in circumference makes no difference.

These sets are made strong, accurate and durable.

Saw teeth should never be twisted, but set at right angles to their points, as shown above.

## IMPROVED BENCH PUNCH.

It is provided with interchangeable dies and plungers varying in size from  $\frac{1}{8}$  to  $\frac{3}{8}$  of an inch in diameter, although any size to  $\frac{3}{8}$  of an inch inclusive can be made to form part of the equipment. This improved tool is made from the best quality of iron and steel, and is designed for the punching of sheet metals. There is a gauge secured by a set screw on the right, which permits of a space of  $\frac{1}{2}$  inch between the edge and the punched hole. It has a very powerful leverage, being provided with a lever 21 inches long, and the device can be screwed or bolted to bench or table to accomplish the desired results.

## MORRILL'S PERFECTED BENCH STOP.

No wood worker can afford to do without a reliable Bench Stop or hook, as it is sometimes called. The end that the screw is in should always be toward the operator. The spindle and working plate is of Wrought Steel. The body is of malleable iron, rendering it the most durable and useful Bench Stop ever put on the market.

This Trade Mark is stamped on all Saw Sets and other Hardware Specialties of my make.

Registered, Pat. No. 30,572.

Registered, Pat. No. 30,572.

Write for Catalogue and obtain a complete list of specialties from which the few cuts above have been chosen.

**HARDWARE PUBLISHING COMPANY,**

**275 BROADWAY, NEW YORK.**

# PRICES CURRENT.

The prices noted in this Prices Current are intended for the Hardware trade only, and for such quantities as are usually purchased by retail dealers. They are carefully revised and represent quotations at which purchases can be made. Very small quantities, and broken packages, frequently make higher prices necessary.

Subscribers are requested to notify us of any discrepancies, as we desire to make this department of our paper worthy of their constant attention.

The list prices, from which discounts are given, will always be furnished the dealer upon request, by the manufacturer quoted.

## PAINT THAT LASTS

Cheap paints are expensive because they do not last.

### American Seal Ready-Mixed Paints

are the best because they last the longest, look the best and give entire satisfaction. The test of time proves this. They are made of the purest linseed oil, white lead, zinc and color. An honest painter prefers American Seal Ready-Mixed Paints because he knows it's to *his* interests to do a good job. It is to *your* interests to see that he does use them. They are made to last whether used for house, floor, carriage, enamel, interior or roof. They are always ready for use.

Manufactured by **WM. CONNORS PAINT MFG. CO.,**  
**TROY, N. Y.**

### MENAGH'S PRICE CARDS AND HOLDERS.

### "BRIGHT AND NEWSY."

Biddle Hardware Co., Philadelphia, Pa. [*General Hardware and Bicycles*]: In season and out, we have claimed that the Hardware trade was the proper medium for the disposal of bicycles and bicycle sundries throughout the country, and our opinion on this point is so well known, that it does not seem as if we could strengthen it materially by saying it again. Of course large cities may be able to support a few exclusive bicycle men, but in the majority of towns and cities throughout the country the man must have other business in order to make it pay. We appreciate the fact that from the first HARDWARE has held the same views, and we think they have been fully justified by the trend of events. HARDWARE is always welcome in our office, and its bright and newsy columns are often a relief amid the cares of business.

## A 20th CENTURY PRODUCTION

"THE" TRAP IS "AT THE TOP"

As compared with all other traps, it is SUPERIOR. It is ALL METAL and will never warp nor split like wood block traps. It can be washed and kept clean. "THE" Trap will never spring of its own accord, but will *always* spring for a mouse. It is easy to set. It has the safest set and quickest trigger ever produced.

TRAP SET.

The manner of baiting "THE" is superior, crumbs of bait being put in the bait box either before or after it is set, and "THE" trap can then be put in a less accessible place, frequented by mice. The bait cannot be touched by mice without springing "THE" trap.

BAIT BOX, SEE?

"THE" stamped on every trap, and is a guarantee that it is the BEST.

FOR SALE BY JOBBERS EVERYWHERE.

GLOBE FILTER CO.,

C. C. COBB, Manager,

71 Gold Street, New York.

We make a specialty of making to order only, a superior quality of Cast Steel Wire Springs, either for extension or compression. These Springs are all oil tempered and are made of an extra quality of wire drawn specially for our own use, of the same grade of stock as we use for the Springs that we put in our Spring Scales.

# HARDWARE PRICE BOOKS.

Arranged by R. R. WILLIAMS, Hardware Editor of The Iron Age.

These Price Books are made in a variety of sizes and styles adapted to pocket, store or desk use, and are specially arranged to meet the requirements of the Hardware and Metal trades. They are printed on paper of superior quality and bound in grain seal leather.

Price Book A.

Columns are provided for the name and number or size of goods, for noting from whom purchased, date of quotation or purchase, list and discount, and for entering freight expenses. Under the heading of selling prices, the regular and any special price or remarks in regard to the goods are given place. *Size of page, 4 x 7 inches.*

FOUR EDITIONS:

- A, 200 pages, - - \$1.00
- A 2, 400 pages, - - \$1.50
- A F, 200 pages with flap, 1.25
- A F 2, 400 pages with flap, 1.75

Price Book B.

In this book each page is complete in itself, and the record of prices does not, as in Book A, run across two pages. Thus it accommodates a larger range of goods with much less detail in the record. By the use of familiar abbreviations is sufficiently large for the convenient and concise record of prices. *Page, 4 x 7 inches.*

FOUR EDITIONS:

- B, 200 pages, - - \$1.00
- B 2, 400 pages, - - \$1.50
- B F, 200 pages with flap, 1.25
- B F 2, 400 pages with flap, 1.75

Price Book C.

The headings in Book C run across the top, in a line parallel with the hinge. The details of weight and freight contained in Book A are omitted, and a single column headed "Add" given for the insertion of freight or other expenses. Under the selling prices space is left for the wholesale price, the retail price, and for remarks. *Page, 4 1/4 x 8 inches.*

FOUR EDITIONS:

- C, 200 pages, - - \$1.00
- C F, 200 pages with flap, - 1.25
- C 2, 400 pages, - - 1.50
- C F 2, 400 pages with flap, - 1.75

Suitable for desk and store use, and for salesmen on the road. A number of pages at the back of the book are arranged for memoranda. *Page, 5x8 inc s.*

FOUR EDITIONS:

- D, 240 pages, - - \$1.50
- D F, 240 pages with flap, - 2.00
- D 2, 480 pages, - - 2.50
- D F 2, 480 pages with flap, 3.00

Price Book D.

## MULTIPLE INDEX PRICE BOOKS.

A special feature of these books is the index, which is arranged with special reference to the classification of Hardware Goods, each index character giving the first two or three letters of the names of Hardware articles. There is an index character to every page, enabling immediate reference to any of the contents of the book. The ease and convenience with which the books can be used is indicated in the following examples, taken from Book F:

For Augers, turn to **AU** For Chisels, turn to **CH** For Iron, turn to **IRO**  
 " Parers, Apple " **PA** " Cutlery, " **CUT** " Irons, " **IR'S**

Both E and F are made of Heavy Ledger Paper and strongly bound in grain seal leather.

Price Book E.

Price Book E—350 pages, 7 1/2 x 10 inches, canvas tab indexing. Price, \$5.00.

Fac Simile of Indexing.

# HARDWARE

Voigt, Starr & Co., formerly established at 67 Reade Street, New York, have removed to 84 and 86 Chambers Street, where they feel satisfied they are in the very centre of the Hardware trade and anticipate the pleasure of adding largely to the list of customers who have so long made their establishment a trade headquarters.

Clarke Merchant, of Merchant & Co., Philadelphia, Pa., under whose successful management the International Sprinkler Co. has achieved such great success, is to be the president of the Schuylkill Traction Co., who are about to build extensions to Pottsville, Tamaqua and Hazleton from Girardville. An article having reference to the International Sprinkler Co. will be found in another column, and will prove interesting reading.

Charles X. Cordier, well known to the Brass, Copper and Metal trades, having been manager of the Bridgeport Brass Co., of New York, for many years, is desirous of securing a position as general manager or salesman in connection with those important lines. As Mr. Cordier is well known to the largest buyers of metals in the United States on account of his long experience, it would seem that he would not be long in quest of a position of this character, having only recently decided to make such new connection. He may be communicated with at Room 1111, 120 Liberty Street, New York.

W. J. Schaefer & Co., whose supply house is in the way of filling the specifications for railroads, mills, steamships, factories, engineers, etc., has been located at 33 Barclay Street, New York, for some time, have moved to larger and more convenient quarters at 98 Centre Street, near Leonard. They hope their trade will find it a much more convenient location to reach, and would be pleased to hear from them.

The Joseph Dixon Crucible Co., Jersey City, N. J., make excellent use of an illustration of the big John Wanamaker store, which they are distributing through the mails, and in connection therewith furnish the information that the tin roof of the same, representing 57,000 square feet of surface, has been covered with two coats of Dixon's No. 2 Silica-Graphite Paint. The preparation is of the color of slate, and gives the roof an equally pleasing appearance.

The Colonial Exploitation and Trading Co., of New York, with office at 11 Broadway, New York City, would be pleased to receive catalogues in duplicate accompanied with discount sheets, special quotations, etc., relating to such agricultural implements as are adapted to the West Indian and South American sugar and cocoa plantations. As large numbers of picks and shovels for mining purposes are needed in those territories, they request catalogues covering these important lines as well.

The Philadelphia Commercial Museum announce the fact that reading, reception and correspondence rooms have been provided on the first floor of the building at 233 South Fourth Street, Philadelphia, for the use of all business men from at home and abroad. In addition to the above-mentioned accommodations, a room large enough to accommodate about four hundred people is available, upon written notice, for business men's conventions or associations. Business men contemplating visiting the institution can order mail matter addressed to them in its care.

Weed & Co., Buffalo, N. Y., the head of which, Hobart Weed, occupies an important official position in connection with the Pan-American Exposition, having charge of the musical features, anticipating a large number of their friends and customers will visit Buffalo during the continuance of the Exposition, have provided facilities for correspondence, delivery of letters and for the convenience and comfort of their friends and others in many ways, and they take pleasure in extending a cordial invitation to the trade generally to make their well-known establishment headquarters for those visiting Buffalo at that time.

The Hutchings & Talmadge Hardware Co., who are the successors of the San Marcos Mercantile Co., San Marcos, Texas, have deemed it advisable to dispose of the grocery stock formerly carried by their predecessors, and intend hereafter to run their business on exclusive Hardware and Farm Implement lines, and everything that pertains to a business of that kind. In making this change, they have just opened a carriage repository, which will make a very desirable addition to the business already established. They respectfully request that manufacturers advertising in our columns will furnish them with such catalogues as would be found useful in the advancement of their interests.

Cronk Hanger Co., Elmira, N. Y., who have been doing business under that name for a long time, without deeming it necessary to make any change in the management, have recently changed their name to the Cronk & Carrier Mfg. Co. C. R. Pratt continues as president, C. F. Carrier, in recognition of whose long service the change in name was undoubtedly deemed advisable, being vice-president and treasurer, and G. H. Carrier, secretary. The skilled inventor and practical mechanic, William Cronk, who has been identified with the interests of the company since its formation, will remain with the company, the factory being run under his supervision, and he giving his entire attention to the manufacture of their specialties. A catalogue which they have recently issued, we reserve for a review in our regular department of Recent Trade Publications.

The annual meeting of the stockholders and subscribers of the Hardware Board of Trade, Ltd., was held at their rooms, 4 and 6 Warren Street, New York, on the 9th inst. The present membership numbers 110. The following officers and directors were re-elected for the ensuing year: President, Robert Sickels, Sickels & Nutting Co.; secretary and treasurer, J. L. Varick, Union Nut and Bolt Co. Directors, William Bishop, P. & F. Corbin; Frank C. Jennings, Bruce & Cook; Henry L. Vreeland. Actuary, Charles A. Hauck, 4 and 6 Warren Street. The annual report of the actuary shows that their financial condition is excellent. During the year their Collection Department received many claims, 90 per cent. of which, or \$152,000, has been collected through their efforts. The Board was established in 1877, and on May 1st, will enter upon its twenty-fifth year of continuous successful business, and they invite all such houses as are not now with them to avail themselves of their facilities. The Board is responsible and reliable, and considers itself a legitimate branch of the trade, being organized for the welfare of its members.

## Editorial Trade Review.

The weather during two weeks past has not been of the kind to foster and encourage the opening of Spring trade, being wet, cold and uncertain. As the unusual spell of wet weather passes away, the prospects become brighter, and the volume of business assumes a more promising importance, giving every reason to look for a full trade from every quarter under an immediate vigorous demand for the staple goods at least, which, for several months, has been held in abeyance.

Labor troubles will seriously interfere with the generally prosperous conditions of industrial advancement. The restless worker whose skill is in demand shows an inability to stand prosperity, and will either reach the "Pike's Peak" of the impossible "or bust." The reports from the South show a greater harmony of sentiment prevailing in labor circles, with less fear of important disturbances to militate against the season's success.

Manufacturers are scarcely catching up on deliveries of orders previously booked, although an anxious desire on their part is an impelling force to "keep things humming" at the factory. Supplementary orders will be the feature of the advancing season, and due preparation for taking care of them will be the policy of the manufacturer who has been more conservative than necessary in stocking up for Spring demands during the final months of 1900.

The constant fluctuation in prices of heavy Hardware in the shape of advances in every instance, has a tendency to stimulate some speculation among buyers who are permitted to enter orders previous to date of announcement, or to expand an old order already on the books. This is usually followed by the cutting of prices and the advantages gained are frequently thrown away on account of a heavier stock than usual being a noticeable feature.

Many lines of goods are already growing so scarce in the market for good-sized specifications, it may readily be anticipated that the scant supply will warrant an increased price by the trade fortunate enough to have a good stock from having ordered liberally at an early date. Poultry Netting, Wire Cloth, Lawn Mowers, Window Screens and Doors and a number of other lines usually in early supply in an inverse ratio to the demand, will be found subjects of urgent inquiry.

Complaints are so frequently heard of the unprofitable handling by jobbers of such staple supplies as Nails, both Wire and Cut, that it would seem the height of wisdom to have some understanding or arrangement between dealers that would create an established price, one which would show a profit on transactions. This naturally would have the backing of the National Association, and a satisfactory state of affairs should be the result. If undue competition continues to cut the throat of good judgment, it might be well to let the retailer send his orders to the mill and lessen by so much the amount of unprofitable business.

The export demand for our manufactured goods continues active, and many manufacturers who have previously given little attention to the encouraging outlook abroad for the distribution of a surplus product, are alert to the advantages which would follow efforts in that direction, and are looking for intelligent representation which would redound to their profit and advance their position in the industry. Our specialties wherever introduced in foreign markets seem to hold their own remarkably well, and aid in creating a demand for labor-saving appliances which is very flattering to our manufacturers.

The activity in real estate matters in the large cities of so many sections of the country indicates an unusual demand for Builders' Hardware, which cannot help, under present conditions, from being a welcome one to this important branch of our industry. Nothing short of a fatuous series of labor disturbances stand in the way of a revival in the way of building, the demand for houses with more modern improvements always proving a close follower on labor well employed and well remunerated. The money market being an easy one, will do its share in promoting a state of affairs of such a gratifying character.

The present firm markets on Iron and Steel, and the further consolidations among large producers, would seem to ensure the safety of placing orders for future delivery, even for next Fall's supply of leading staples. A number of merchants are even now in the field with specifications on goods for Fall delivery, profiting by the delays caused already this season by an over-abundance of caution in estimating the wants of their customers under progressive conditions. Crop prospects, judging from government reports, are of an encouraging character, and the buying capacity of a successful farmer has rarely been over-estimated.

## Our Increasing Exports.

The fiscal year 1901 seems likely to exceed any preceding year in its record of exports from the United States. The steady growth of our exports from 392 million dollars in 1870 to 835 million dollars in 1880, 1030 millions in 1892 and 1394 millions in 1900 has been a subject of much attention and much favorable comment, but it seems that 1901 is to surpass the record of the year 1900 and bring the export figure nearly if not quite to the billion and a half mark. The March import and export figures, just completed by the Treasury Bureau of Statistics, show a total exportation from

the United States in the nine months ending with March, 1901, of \$1,140,170,728, or \$86,540,032 in excess of last year which held the highest record in the history of our export trade.

Another interesting fact developed by the March figures of our foreign commerce is that imports seem likely to show a decided decrease in 1901, as compared with 1900, while the exports are showing the increase above indicated. The figures of the nine months ending with March, 1901, show a decrease of \$42,292,639 in the imports, as compared with those in the corresponding months of the preceding year. Thus the excess of exports over imports in the nine months under discussion is more than \$100,000,000 greater than in the corresponding months of last year and far beyond the figures of any preceding year. The excess of exports over imports in the nine months ending with March, 1901, is \$540,687,337, as against \$411,854,666 in the corresponding months of 1900, an increase of \$128,832,671 in the net excess of exports over imports for the nine months of 1901, as compared with the corresponding period of the fiscal year 1900.

The farmers are apparently the chief beneficiaries in this remarkable increase in our exports, and are in the fiscal year 1901 showing greater gains in their exports than are the manufacturers, whose record in 1899 and 1900 showed a greater percentage of growth than those engaged in agriculture. The analysis by the Bureau of Statistics of the March exportations of domestic merchandise has not yet been completed, but that of the eight months ending with February, showed an increase of \$88,000,000 in the exportation of agricultural products and but about \$2,000,000 each in manufactures and products of the mines, forests and fisheries.

This check in the growth of the exportation of manufactures is more apparent than real, being due in part to the absence of statistics of exports to the Hawaiian Islands and to the separation of the trade of Porto Rico from the regular statements of foreign commerce in the returns to the Bureau of Statistics, while the temporary reduction in the exports to China, due to the disturbed conditions in that country, also accounts for the lack of growth in the figures relating to the exportation of manufactures.

The reduction in the import figures is largely due to the reduction in price of the materials imported by manufacturers, and occurs chiefly in the class "Articles in a crude condition which enter into the various processes of domestic industry." Yet, while the figures of value are materially reduced the quantities of these particular articles imported for use in manufacturing show little reduction. In India rubber, for instance, the fall in value of the imports during the eight months ending with February, 1901, as compared with the same months of 1900 is from \$21,000,000 in 1900, to \$16,000,000 in 1901; yet the reduction in quantity is only from £33,000,000 in 1900, to £32,000,000 in 1901, showing that the chief reduction is in the price rather than the quantity imported. In raw silk the value of the importations falls 51 per cent. while the quantity falls but 42 per cent., and in other importations of manufacturers' materials the reduction in value is greater than in quantity.

### Export of American Products to the Continent.

Having spent considerable time on the continent, and being in a position to look carefully into the subject of export of American products, possibly the following will prove interesting to many American manufacturers and producers, who are anxious to secure a market abroad but are not in a position to bring their goods before the Continental purchaser, for many reasons, one being the heavy expense should each manufacturer or producer attempt to open separate offices in the large cities of the Continent; another being a lack of the knowledge of the languages, and a third no idea of the customs-systems of business as conducted abroad, and how goods should be labeled, packed, etc. All of these require a careful study for each country and commodity.

Any one carefully keeping up with our able consular reports, will see that there is a great and growing demand abroad for American products. Our consuls have been very earnest in their repeated notices and solicitations that the American manufacturer and producer make some arrangements whereby definite and detailed information can be given of their products, cost of freight, duty, etc.

I myself have had numerous enquiries as to where certain articles of American manufacture could be secured; if they were represented abroad; the best arrangements to make for purchasing and payments.

These enquiries come principally from parties who do not speak nor write English, and do not know the American way of conducting business.

Our catalogues in English are of very little, if any, use to these prospective purchasers. So to give the information desired, they long for catalogues of American products in their respective languages, and for some one who can intelligently explain the details of American products, shipping, freights, customs and payments.

The remedy that I suggest for this, and to open up a market now awaiting these products, is as follows:

Paris is *the city of the Continent*; every one wants to come and will come to Paris if an opportunity offers. So it is here in Paris that we see people from all over the world, not alone for pleasure, but for business as well, as most of the large houses and manufacturers of the Continent have offices in Paris. It is here one can gain any and all information as to what is going on, in the Continent, the French language being the court and diplomatic language.

The first reason of expenses, I think, can be obviated, and the chances of presenting a line of articles to the public at a minimum cost, until the business should assume such proportions as to justify a special representation, is by having in Paris a house with good showrooms for American products, where a few important lines will be presented in an attractive manner. The different concerns represented will contribute a moderate amount monthly to defray rent and office expenses.

Secondly, the American catalogues and circulars and all information should then be translated into French, German, Spanish, Italian, etc., and from this office in Paris be sent to agents all over the Continent who will handle such goods on commission, (as many such agents can be had), correspond with them and send them printed matter in their respective languages, and not try to make the world read and write English all at once, particularly when you are asking them to be buyers of your goods.

Take the important articles of information as they appear in our American papers and periodicals, translate them into the language and expressions of the markets in which the agents are at work, and let them have and use the best of information in presenting American products. From an office in Paris many native agents could be looked after, while from America it is quite enough to keep one or two foreign agencies well informed.

The expenses by this means of an American concern being represented abroad would for an individual house be nominal, and by a house here representing several articles or manufacturers, one branch would advertise for the other and build up a large and satisfactory business abroad.

A house of this kind would expect to make its profits out of the commissions allowed on sales, so would not be a tax on the American firm.

As this matter will certainly interest many substantial American manufacturers and producers, the undersigned would be pleased to give further information to those interested.

Very truly,

C. C. KING,

Commissioner from Mississippi to the Paris Exposition.  
25, Boulevard des Italiens, Paris, France.

## LEGAL CORRESPONDENCE.

Conducted by William Marston Seabury, Attorney and Counsellor at Law,  
No. 43 Cedar Street, New York.

Any subscriber to "HARDWARE" is privileged to ask any legal question he pleases in this Department and it will be answered free of charge. Address all communications to Editor "HARDWARE," No. 277 Broadway, New York City.

QUESTION: Some four years ago I called with my son, a boy who was then about five years old, upon a friend of mine. While I was talking to my friend, my son walked out of the store and fell down an open elevator shaft, and was injured. The elevator shaft was open, and the gate had been broken for some time, so that any one might easily have fallen into the shaft. My son seemed to recover entirely from his injuries, but the doctor said that spinal disease might show itself later. This trouble has recently developed to an alarming extent, and the doctor says the boy will be a cripple for life. Can I sue the owner of the elevator shaft or have I waited too long?

REPLY: From what we can tell of the facts of the case, we are of the opinion that a course of action could be made out against the landlord of the premises or the person whose legal duty it was to properly guard the elevator shaft. An action to recover damages for an injury to the person of the plaintiff or of another must be brought in New York State within three years from the accrual thereof. This statute contemplates the bringing of a suit by the father of a child to recover damages for the loss of his services, or an action by a husband for the loss of services occasioned by an injury of this character sustained by his wife. This action would therefore be barred by the statute, but the right of action of your son is not barred for the reason that he is an infant, and as such, is, in law, deemed to be under a disability, and, as a general rule, as to a person, under a legal disability, the Statute of Limitations does not begin to run until the disability ceases, which in cases of an infant is when he reaches the age of twenty-one years. You may, however, have a guardian *ad litem* appointed for your child, and commence suit at once.

QUESTION: Until recently I have been a member of a benefit association and was insured for the benefit of my wife to the extent of two thousand dollars. There are various branches of this association, to one of which I belong. The rules of the association provide that if the treasurer of one of these branches shall fail to pay an assessment to the main association for fifteen days after it is called, the whole branch shall stand dissolved and that all benefits of the members shall cease. The rules further provide that if the branch association shall pay the tax with a slight penalty, it shall be reinstated, provided the payment is made within thirty days after its dissolution. An assessment was called by the main body to which I, and other members of my branch, responded in plenty of time and delivered our money to the branch's treasurer. The treasurer was taken suddenly ill, and by the time he recovered and was able to attend to his business, the fifteen days had expired, and the thirty days had almost come to an end. On the thirty-first day after the fifteenth day had expired, our treasurer sent in his assessment. Two days after this he received it back again, with a notice from the main body stating that the branch stood dissolved and disconnected from the main body, and that its members had forfeited their benefits. We have petitioned the main body, but can get nothing from the people in charge. Can anything be done to prevent the forfeiture of our benefits?

REPLY: Upon the state of facts presented to us, we are of the opinion that upon proper application to the court a writ of mandamus would be issued compelling the main body to reinstate the branch dissolved or the individuals who had paid the assessment, and were not at fault. You should consult a lawyer at once, and take action along the lines suggested. The case of the People vs. Crawley in 23 Abb. N. C., 823, is a case somewhat similar to the one here presented, and in this case, it was held that a mandamus was the proper remedy for the injury to the individual members of the branch association dissolved by reason of the treasurer's neglect or failure to perform his duty.

QUESTION: I am a director of a small corporation, incorporated under the laws of New Jersey. I, and four other

directors of the company, desire to increase the number of directors of the company from five, as is at present provided for by the by-laws, to seven. All the directors favor the plan, but some of the stockholders object. Can we call a directors' meeting for this purpose?

REPLY: The directors of a New Jersey corporation have power to amend the by-laws of a corporation, and to increase the number of its directors, only when that power is given to them by the certificate of incorporation. The New Jersey Corporation Law provides that the power to make, alter or amend the by-laws shall be in the stockholders. It will, therefore, be necessary to call a stockholders' meeting for this purpose, and if the by-laws provide what the number of directors shall be, it will be necessary to amend them. The power to elect directors is a power distinct from the power to make by-laws, and is also in the stockholders.

QUESTION: I own several small houses in New York, all of which are rented, and I have been in the habit of collecting the rents myself and attending to the management of the property. I am about to go abroad for quite an extended business trip and should like to know how to arrange matters so that a friend of mine may collect these rents and manage the property while I am away. If I see all my tenants and instruct them to pay the rent to my friend, is this sufficient?

REPLY: Although the plan you suggest might be upheld, it would be an extremely unwise course for you to adopt. The proper thing for you to do if you wish your friend to have control of the property in your absence is to give him a power of attorney to collect your rents, giving him power to institute any action necessary for the collection of the same, or for the recovery of your property from the possession of your tenants should they refuse to pay their rent. You should also give your attorney any other power you desire him to have. In this way, he will be able to enforce the collection of the rents in question.

## Conditions vs. Theories.

While the retail Hardware storekeeper is bemoaning the fact that his business is gradually but constantly being encroached upon by department stores, catalogue houses, jewelers, etc., and deploring a condition he seems powerless to prevent, let a man up a tree suggest that they use a little of the time discomposing cerebral tissue.

The writer hereof boldly takes the stand that if the retail dealers in any line had exercised the proper business skill and gumption in the conduct of their business, the department store and catalogue house would never have been born.

To specialize, is it not a patent fact that as a general proposition dealers sell "what is called for?" Is it not a fact that they seldom or never try to create a demand for a new and useful article for which there is wide use, and in which there is good profit? Where do you find the dealer that does anything except block up his sidewalk (and make his entrance a place to be dreaded), with an indiscriminate conglomeration of "useful (?) articles?" His advertisement in the local paper reads something like this:

INDOLENCE & CO.

Hardware of All Kinds.

Nails, Scrapiron, Seeds, Garden Tools,  
Etc., Etc.

No. 123 Blank Street, Lonesomeville, Q. X.

How often does the local dealer change his advertisement? Editors say from three to four times a year up to once in four to six years. I picked up a paper recently published in a Connecticut town and noted an advertisement which, to my certain knowledge, has stood unchanged for twelve years. Why the men are throwing away money this way for, I cannot understand, and don't wonder they consider advertising an "expense."

Now, how many sewing machines would S. R. & Co. sell at \$11.95 if they put in a stock and waited for people to call for them? How much garden hose at 6 cents per foot, and so on. The reason for their success is not far to seek, and is

right at the surface. They have done some thinking; they have realized that people want sewing machines and have spent money to let the people know they realize it, and I actually believe they make as much on their \$11.95 machine as the Singer Co. does on one at \$65. They go on the plan that the man or house who sells the goods makes money, not he who keeps them. Instead of a dealer keeping goods, they should keep *him*, and should keep him busy, too.

Again, we don't find the department or catalogue house letting their advertisement stand until it becomes so common it is forgotten. Their advertiser is awake, in his senses, and telling the people perhaps what they already know but which they really are not aware of till brought to their attention. They even anticipate the wants of the people. They study the seasons, find out what should sell at certain times, and then devote their energy to selling those articles.

Here is a case: A housewife is canning cherries. She is tediously splitting the cherries, taking out the stones one at a time. She doesn't even know that a device exists for doing more of this work in an hour than she is doing in half a day. Has she even seen an advertisement of a Cherry Stoner in her local paper? I trow not, and she picks up her *Comfort* or *Fireside Visitor* and sees that for 50 cents Wideawake, Bigstore & Co., of Chicago, will send her by mail a Cherry Stoner which relieves her of her drudgery. Fifty cents goes by next mail that might have gone into the local Hardware store. Now, how many other women do the same thing every day? How many would do it if W. B. & Co., simply announced in their advertisement that they sold "every thing?"

The simple proposition is this:—now, isn't it?—the average retailer has by indolence and inactivity reduced his business to the smallest compass, while by opposite methods, the department store comes right under his nose and gets his customers selling them the very goods he has carefully boxed or wrapped up on his shelves, there to remain 'til the sheriff or his successor takes them off his hands.

It has been said that opportunity comes but once. May be so, but she hung around the retail dealer for a "good long spell" before she passed on. Fortune pounded the retailer's door with Titanic blows; they, like those bidden to the feast, were proving their oxen, examining the land they hoped to buy, or courting the new wife. The department store and catalogue houses are here to stay, their methods are "down to date," they are in business to make money and let the people know it. It is too late to fight them, they have already won, and unless the retailer changes his tactics, he will soon reach the vanishing point. Don't deceive yourself. Deceive the other fellow if you can legitimately and honestly, but it's rank suicide to deceive yourself.

What is the remedy? First, confess that you are too late to take the initiative but not too proud to profit by the facts. He who can't lead must follow. Let your people know you are alive, use your local paper to convince them of the fact. Find out where you can make a run on novelties or seasonable goods, and do it vigorously. Anticipate the wants of your people, educate them to see where you can save them time or money or both, get goods that have some legitimate talking points and then make a noise about it.

To make an already too long harangue brief, fight catalogue houses with their own ammunition which is "good goods well presented," "demand created for new articles of merit." Do this and your slumbers will be peaceful; neglect your opportunity still further and—good-bye—hats off to the Old Guard.

F. A. SOUTHWICK.

### About Mica and Mica Mining.

There is a large increase in the consumption of mice due to its use in electric work.

#### REQUISITES FOR COMMERCIAL MICA.

Among the minerals of minor economical importance, none seems to have attracted more attention recently than mica.

We have been in constant receipt recently of inquiries with regard to the possible value of mica deposits, and of reports of the discovery of such deposits in all parts of the country. Unfortunately, most of these reports are based on mistaken ideas in relation to the mineral, and turn out to be of little or no value.

There are two or three probable reasons for this general interest. The first is the large increase in the consumption of mica due to its use in electric work, and the consequent rise in price. The second is that mica is very widely distributed, and is of very common occurrence; though, unfortunately, it is found in very few places in large quantities or in such form as to be of commercial value. Another reason, perhaps, is that very few are practically acquainted with mica mines and their workings, and are, therefore, liable to be deceived by indications which the experienced mica miner would at once see to be of no value. A few words on this mineral may be of service to the many who seem to be in search of it.

The first requisite for commercial mica is the size of the blocks from which sheets can be split. In addition to this, the sheets must be free from cracks and flaws of all kinds, must be fairly even in thickness and not too brittle. Formerly good color was also a prime requisite, and this is still the case for certain kinds of work; but for electric work, if the other requisites are met, color is of minor importance. The exception is the dark red or rusty color, which indicates the presence of iron as an impurity, which impairs its insulating properties. It may be of interest to prospectors to note that experienced miners say that where the blocks of mica are checked, split and cracked on or near the surface, there is seldom any improvement in quality with depth.

The mining of mica is not usually a difficult operation. In those mines which are now worked, hand labor is chiefly employed; and the preparation for market is chiefly done by hand labor also, the tools used being few and simple. It is due to this that the mines of India, where hand labor—usually dexterous through long practice—is paid at very low rates, are able to supply other countries at prices which meet competition everywhere. The preparation for market is comparatively simple, consisting only in freeing the blocks of mica from the gangue in which they are found, and splitting them into sheets. The waste in mining is very great. The mica is usually found in pegmatite dikes, which occur in gneissic or granite rocks. In some instances in this country the mica constitutes as much as 10 per cent. of the total mass of the dike, but often it is less than 1 per cent. The quantity of waste rock to be handled is, therefore, very large. Moreover, of the mica taken out, the proportion which has a commercial value as sheet mica varies in our best mines from 2 to 10 per cent., seldom approaching the higher proportion.

There are no by-products in mica mining, except the scrap. In its usual scrap form its value is small, but when pulverized there is a certain demand for it. As a fine powder it is compressed and used in some forms of insulators in electric work. In powder it is also used in making some kinds of paint, in manufacturing wall paper, as an absorbent in making dynamite and in making lubricants for large and heavy bearings. It will not, however, pay to mine small or scrap mica to pulverize. The supply is large already, and it can only pay to grind and market the mica powder when the sheets meet the chief expense of mining.

We do not wish to discourage the search for this mineral; but it is certainly of advantage to prospectors to understand what they can expect from a deposit, and how much time or labor it is worth while to spend in looking for it.—*The Engineering and Mining Journal*.

Recent statistics show that in Germany the 673 societies of the Turnerschaft represent 20,600 women who take part in active gymnastics.

### International Sprinkler Co.

The International Sprinkler Co., 517 Arch Street, Philadelphia, and Piedmont Building, Charlotte, N. C., is continuing in the good work of fire protection on an ever-increasing scale. They have taken in the neighborhood of thirty contracts for sprinkler installations in the past three months, which is a record that speaks well for any concern in this line. The excellence of this company's devices, engineering and contracting work is becoming more and more widely known, and they are beginning to reap the benefit of their high standard of business methods.

Among their contracts recently taken are: The new and extensive building of J. B. Lippincott Co., the large publishers of Philadelphia; Reiling, David & Schoen, Anchor Duck Mills; Roanoke Cotton Mills, Roanoke, Va.; Lever Bros., Ltd., the International Soap manufacturers in their large Philadelphia works; J. G. Brill Co., the car builders, Philadelphia; Edna Cotton Mills, Reidville, N. C.; a second order for the Richmond Locomotive and Machine Works, Richmond, Va.; the large new establishment of Marks Bros., the Philadelphia dry goods merchants; Lynn Cotton Mills, China Grove, N. C.; Standard Steel Works, Burnham, Pa., and Diamond Silk Co., York, Pa.

The Company is also doing an extensive business in Canada through their representatives, Messrs. W. J. McGuire & Co., Toronto and Montreal.

The International Co. is paving the way for securing its proportion of the business throughout New England through their representatives, the Rhode Island Engineering & Supply Co., of Providence, R. I. This is an active and well-to-do concern who have just completed extensive shops for cutting and handling pipe and fittings at Providence, R. I. President Mills was the manager of the New York branch of the Crane Co., of Chicago, in which capacity he managed a business for them of over a million dollars a year. They are thoroughly experienced sprinkler people and with their clientele in New England, facilities and general capacity for such line of work, it is safe to predict that they will get their share of the future sprinkler business in that important section hereafter.

The International devices have become so well known that any company having the use of them is sure to get their proportion of both wet and dry installations.

### Originality.

One of the things most urgently in demand to-day, says the *Metal Worker*, is originality. This is true of every line of effort, but more particularly does it apply to the business world. It doesn't follow that because a thing has been done in a certain way from time immemorial that is the only way or the best way to do it. Progress, which is the preponderating characteristic of modern life, demands a constant recasting of long held opinions, and involves a challenging of traditions, however ancient and generally accepted. The man who wants to rise out of the mass of humanity and be a leader and not a follower must break the shackles of conventionality and strike out for himself on original lines. He cannot be content to accept as the whole law and the gospel the methods and principles of his forerunners in the same field of endeavor. There is always room everywhere for new and improved methods in the conduct of business enterprises or industrial pursuits. In no direction has finality been reached. Originality in every sphere of life is at a premium, and, though people may criticise it, they still acknowledge its power. The men who have made great successes in business have been the originators and not servants of precedents and tradition. The idea that a sticking close to the old paths is the best and safest way no longer holds water in connection with business. That way leads eventually to dry rot and dissolution. It is an easy thing enough to go along in ruts that have been dug out deep by the wheels of those who have gone before, but it isn't the way to grasp success or leadership. Originality attracts the attention of

mankind as does nothing else, and a correct originality, founded on sound and well thought out principles, and without flavor of mere eccentricity or extravagance, is of inestimable value to the business man in attracting the attention of buyers. Consequently, it is a thing to be desired and cultivated.

### Aluminine Stove Finish.

An article which is attracting a great deal of attention among the stove manufacturers and wholesale and retail Hardware dealers is the Aluminine Stove Polish offered by the Aluminine Paint & Polish Co., 707 W. Lake Street, Chicago, Ill.

This polish is in the form of a paint, the metallic basis being Aluminum powder, and the company inform us that the liquid which they use in its mixture is prepared especially to withstand a high degree of heat.

Aluminine Stove Polish was placed on the market in 1896, and since that time, it has been used extensively throughout the country. The manufacturers claim that they were the first to offer an Aluminum finish for stoves, and inform us that they were allowed a patent on same, under the date of April 7th, 1896, covering an Aluminum finish for stoves containing Aluminum powder as a metallic basis.

The indications are that this finish in time will entirely supersede the black; it is no trouble to apply Aluminine, and one coat will last for a season, the hottest fire having no effect on this finish.

ALUMININE STOVE FINISH.

Aluminine finish has been adopted by a majority of the leading stove manufacturers in the United States and Canada, some of whom use it on the interior of the ovens and oven doors, while a large number finish their steel ranges in this manner, instead of using the Black Enamel, which has been the customary finish used heretofore. Nearly all of the manufacturers advertise the Aluminine finish as a special feature on their goods, which is an indication that they consider same a meritorious article.

The Aluminine Paint & Polish Co. offer in connection with their Aluminine Stove Polish, an Aluminum Enamel for ordinary iron work, a complete line of Radiator, Bath Tub and decorative enamels, also Gold, Copper, Silver and Aluminum Bronze Powders with special liquids for applying the same, etc.

We advise any of our subscribers who are interested in the above goods to write the company for their price list; we understand that they guarantee all their goods to be entirely satisfactory.

Towne—Judging from Bragg's talk his connection with that great corporation must be a regular sinecure.

Browne—Indeed?

Towne—Yes, he says he's the figurehead of the concern. That sounds big.

Browne—Oh, he's the bookkeeper.—*Philadelphia Press*.

## CONSULAR COMMERCIAL COMMENTS.

### ACETYLENE GAS FOR LIGHT-HOUSES.

Consul-General Guenther, under date of Frankfort, March 4, 1901, reports that at the light-house of Altenbruch, acetylene gas has been experimented with, as the strongest petroleum light proved too weak for this station. It is stated in German papers that the results were entirely satisfactory, and it is expected that acetylene gas will now be used extensively for light-houses.

### FANCY AND LEATHER GOODS EXHIBITED IN LONDON.

Under date of March 20, 1901, Vice and Acting Consul-General Westacott transmits the prospectus of an international fancy and leather goods exhibition, to be held at the Prince's Skating Club, Knightsbridge, London, from May 4 to June 1, 1901, under the direction of the British and Colonial Exhibitions, Limited, and supported by a large number of leading people. The Vice-Consul-General requests that an early notice may be given in the consular reports calling the attention of American makers of fancy and leather goods to the opportunity of exhibiting in this exposition; but the latest date (March 31) on which "applications for space should be sent in" had elapsed before the Vice-Consul-General's report was received at the Department.

### FIREPROOF STAIRS.

Under date of March 2, 1901, Consul-General Guenther, of Frankfort, reports that on the 2d instant official tests of so-called fireproof stairs for apartment houses were made at the yards of one of the fire department stations in Frankfort, where intense fires had been started for the purpose. The stairs covered with plastering showed the longest resistance and could still be used after being subjected to the fire for twenty-five minutes. Of stairs coated with fireproof paints, no tangible results could be stated, as the stairs experimented with were of great variety as to material and strength; but they were still serviceable after five or ten minutes under fire. Of the wooden stairs without fireproof paints, those of oak withstood the fire the longest.

### AMERICAN MANUFACTURES IN AUSTRALIA.

Under date of March 4, 1901, Consul-General Guenther, reporting the arrival of the steamer *Star of Australia* of the Tyser Line, at Melbourne, says:

This steamer is said to have brought to Australia one of the largest shipments of American manufactured goods that has ever left an American port. Her cargo list covers 120 packages, in which is included every variety of manufactured goods produced in the United States. There are 400 tons of sewing machines alone. For Auckland, New Zealand, the vessel brought an entire gas plant weighing 500 tons. There are rifles, shotguns, revolvers and ammunition sufficient to supply a brigade, while lawn mowers, reapers, wagons, wheels, coffee mills, patent medicines, etc., are reckoned by tons. Kerosene to the extent of 80,000 cases and 1,500 barrels, 1,000 tons of wire, 1,200 tons of bar iron, 400 tons of roll paper, hundreds of pianos and organs, together with an extensive array of miscellaneous articles, comprise a cargo which, for size and value, has probably not been exceeded in any vessel coming to Australia.

### LARGE MASONRY BRIDGE SPANS.

Consul-General Guenther, of Frankfort, under date of February 27, 1901, reports that a masonry bridge is being constructed across the Valley of Petruffe, in Luxembourg, which will have the largest single span of any masonry bridge, viz., 277 feet of a span width and a rising acclivity of 102 feet. Previous to this, the largest masonry bridge span

was that of Cabin John Bridge, near Washington, viz., 220 feet, with a rising acclivity of 57½ feet and a height above the water of 101 feet. Following Cabin John Bridge comes the railroad bridge at Jarengo, over the Pruth, followed by the Grosvenor Bridge, over the Dee, at Chester. These three spans have been among the world's greatest architectural triumphs in bridge masonry.

### EXPOSITION OF FIRE APPARATUS AT BERLIN.

It is to be feared that American manufacturers of fire preventing and extinguishing apparatus are going to lose a rare and valuable opportunity through their unaccountable indifference to the special international exposition of that whole class of appliances and methods, which is to be held in Berlin during the coming Summer. This indifference is all the more remarkable since the brilliant record made by the American firemen and makers of fire apparatus at Paris last year, which, as will be remembered, was one of the noted features of the exposition. In view of that success and the well-known pre-eminence of American fire brigades and their equipment, the managers of the forthcoming exposition at Berlin have been especially anxious that the United States shall make a full and representative exhibit, and are somewhat surprised at the meagre response which has been thus far received from our country. This is certainly due to no lack of publicity. The whole plan and schedule of the exposition—conditions, classification of exhibits, cost of space, etc.—were reported simultaneously and in detail from the United States Embassy at Berlin and from this Consulate-General early in August last and published in advance sheets Nos. 803 of August 19 and 817 of August 25, and Consular reports Nos. 241 and 242 for October and November, 1900, respectively. As a result of those publications a few somewhat languid inquiries were received, but nothing at all commensurate with the fame of American builders of engines and fire apparatus, nor the unequalled opportunity that they will find here at trifling cost for showing their products before the assembled experts and municipal officers of Europe, who are many years behind our people in all that relates to fire extinguishing and will come here to see, test, and order the best that the world has to offer.

In order to especially facilitate American exhibits, arrangements have been recently made by which all machinery and apparatus intended for exhibition shall not only be admitted free of duty, but shall be brought from New York to Hamburg and Bremen by the Hamburg-American and North German Lloyd steamship lines and returned after the exposition free of charge for freight or handling. Exhibits coming from these two seaports will be subject to the usual charges for railway freight and delivery at the exposition, but they will afterward be returned gratis to either seaport, so that the only expense of this kind from the American port of shipment and return will be the ordinary railway freight rate from Bremen or Hamburg to Berlin. Certainly, this is a very liberal proposition.

The exhibition was originally scheduled for the months of June and July, but as now decided will open about May 15 and continue until the end of August. Applications should nominally be all in by April 1, but this limitation will be relaxed somewhat in favor of foreign exhibitors who may have postponed their decision until the last moment. All telegrams and correspondence relating to exhibits, space, or any difficulty about ocean or rail freights should be addressed to Grand Director Giersberg, Berlin.

FRANK H. MASON, Consul-General.

BERLIN, March 25, 1901.

### The Evolution of Binder Twine.

The first use of twine for binding on a harvesting machine, says *Farm Implement News*, was made by John E. Heath in 1850, and on several other twine binders which were invented and patented down through the years until 1880, when it became settled beyond question that twine was the most satisfactory band for automatic binding. What sort of twine Heath and other early inventors used is not known, but it may be supposed they took such cord (their machines were first termed "cord binders") or twine as they could obtain or make out of such material as they could get for their experiments. Gorham, Appleby, Holmes and Levalley used so much in their experimental work before twine binders were put upon the market that they must have found at the mills what would answer their purpose, or had it made for them.

The fibres of the cords first used in grain binding were cotton flax and hemp; but at the time cord or twine was generally accepted as the best band, Kentucky hemp had proved to be the most satisfactory fibre and was commonly used, the cord made therefrom having two or more strands. But it was not altogether satisfactory, as it was not fully reliable on the knotter or in the holder, and it was too expensive. In 1879 William Deering, who had become the leader in the introduction and establishment of the cord binder on the market, and was preparing to put out a large number of these machines for the harvest of 1880, went East among the rope and cordage manufacturers for the purpose of personally explaining to them what kind of twine was needed for binding and of getting it made if possible. He interested the late Mr. Fitler, of Philadelphia, who, on account of the surprisingly large amount of twine wanted and ordered by Mr. Deering, undertook to produce it small enough and yet of sufficient strength for the purpose, from manila hemp. It was made both single and double strand, and worked very satisfactorily in the harvest of 1880. The single strand was adopted, as it did as well and could be made the cheaper.

Single strand manila twine having demonstrated its superiority to the cords previously used, experiments were made with sisal the next year and considerable was sent out on trial. Pure sisal did not prove entirely satisfactory at first, as the machinery then used turned it out too lumpy and hairy; but as mixed with manila, half and half—the next step—an excellent twine was produced which was termed "standard." Other manufacturers of cordage undertook the making of twine, the machinery was improved and pure sisal soon gained a firm place on the market. Some flax twine was also made and put out, but it did not give satisfaction. Later, as prices of hems, especially manila, advanced under increasing demand, manila was adulterated with sisal and sold as pure manila; less manila was put with sisal, and mixtures in various degrees and with New Zealand hemp were made and sold as standard. Still later, in 1892 or 1893, the so-called "blue-jay" twine, consisting of jute with a sliver of manila or sisal twisted around it, was put out; and considerable pure jute was made into binder twine, some seven or eight years ago, when better fibres were scarce and dear. Since with increasing supplies of manila and sisal hemp and decline in their prices, these other fibres have dropped out of use as materials for binder twine. At first manila was spun considerably smaller than it is now and standard measured more feet to the pound. In the year 1882 the writer bought quite a lot of pure manila twine that actually measured 800 feet to the pound, which, with careful adjustment of the binders, did good work.

Besides the fibres mentioned, various other materials have been used in the making of bands for automatic binders. Wire was of course the leader, and it was with wire that practical binding was first accomplished and binders were successfully established upon the market. But wire was objectionable on account of its going into the straw, getting into the grain and being so small that it cut or broke the outer

stalks so that the heads fell over and formed what was termed an "umbrella bundle"; hence it was easily displaced by twine when the knotter was made reliable and acceptable twine could be obtained. Inventors have used straw in various ways for binding, and some success has been attained with straw spun into small rope. Twine made of paper has been successfully used, but it proved too expensive. Very satisfactory work has been done with twine made of wire grass, and there is good promise for this material. It was quite prominently brought forward early in the "nineties," when the standard fibres were scarce and dear, by Walter A. Wood, but its introduction was not pushed on account of his death, and the increase of supply and decrease in cost of manila and sisal hems. Within the last three or four years other parties have revived the grass twine business. They have made and put out considerable quantities of this twine and they are preparing to introduce it extensively.

Inventors of binders were the first to use the various materials mentioned for binding and manufacturers of binders took the initiative in having these materials so made and put up as to be practical and marketable, and they also led in the changes from one material to another as the latter demonstrated its superiority. The inventor who first succeeded in producing an automatic binder that went into practical use was S. D. Locke. His machine bound with wire and was manufactured for the trade by the Walter A. Wood Co. as early as 1874. The inventor who first succeeded in producing a practical automatic twine binder was John F. Appleby. A few of his machines were put upon the market in 1877 and 1878, as made by Parker and Stone, of Beloit, Wis. Then William Deering undertook their manufacture and introduction. His success was such that in 1880 he had fully established the superiority of twine over all other prepared bands.

### Keeping a Daily Stock Account.

We have received the following communication from a leading house among Hardware manufacturers:

MR. EDITOR:

I would like to ask through your columns, if possible, if there is any systematic method in general use among the wholesale Hardware houses of keeping a daily stock account? We want to keep a stock account of this kind, having reference to our stock-room, and do it by the simplest and most up-to-date methods so that we can verify the stock on hand on any particular date by taking the stock book and finding the quantity on hand without being compelled to take an account of stock on every such occasion. In other words, an effort would be made if there were a system of the kind we are thinking about, to have it balance as correctly each day as a cash account or trial balance in the regular way of book-keeping, and yet be accomplished without going into a system requiring a large force. We would be glad to see some discussion on this matter as to the most desirable way of accomplishing a result such as we have outlined above.

G. D. K.

We trust that some of our wholesale houses have a systematic method of keeping an account of stock, a suggestion regarding which would be very acceptable to the correspondent.—EDITOR.

### Columbian Hardware Co.

The Columbian Hardware Co., Cleveland, Ohio, at a meeting held recently, elected the following officers: L. A. Cobb, president; L. S. Sherwood, vice-president; Wm. M. Powell, treasurer; Geo. H. Dippe, secretary; Oscar C. Eben, superintendent. This company recently purchased the plant of the Van Wagoner & Williams Hardware Co., and will continue the manufacture with several additions of the line of goods which were so favorably known to the trade under the previous management. The New York office of the company remains at 14 Warren Street, in charge of Christian T. Stork, and the Chicago office is at 27 Lake Street.

Mrs. Greene—for the land's sake, how did Miss Prettiwun ever come to marry that homely old fool of a Hudgkins?

Mrs. Gray—I understand he was attached to the money she wanted.—*Ex.*

## THE PAN AMERICAN EXPOSITION, 1901.

### THE BRIDGE OF THE THREE AMERICAS, BUILT BY BUFFALO FOR THE PAN AMERICAN.

Spanning the neck which separates the Park Lake from the North Bay in Delaware Park is the Bridge of the Three Americas, a beautiful, substantial and serviceable structure, which will be much admired by the Exposition visitors.

It is built of white granite and is in the form of three arches, each representing one of the Americas. The keystone of each arch is covered with a characteristic Indian head, males and females being represented. The arches are surmounted by a balustrade of turned granite balusters and heavy granite coping. Over the central arch are four pedestals—one at each corner—upon which it is proposed to place bronze urns or lamps. On the land abutments are long pedestals suitable for handsome groups of statuary. It is suggested that a group by Karl Bitter be placed upon one of them temporarily, during the Pan American Exposition next Summer.

132 feet. It is situated in the southern portion of the grounds, east of the main approach. Its nearest neighbors are the Six Nation Indians' large stockade and log and bark cabins.

There will be extensive displays of forestry by various States, and Uncle Sam's new possessions will make a splendid showing of native woods.

The United States Government forestry exhibit will form a division of the important display to be made by the Department of Agriculture in the Government Building. It will consist mainly of a photographic display illustrating the relation of agriculture to forestry, supplemented by maps and sections of commercial timber trees from the Appalachian Mountain region.

The photographic display will embody sixty framed bromide prints enlarged from photographs, together with twenty colored and uncolored transparencies.

The bromide pictures range in size from sixteen by twenty-

The total length of the bridge is 138 feet. Its width over all is 85 feet. The roadway is 53 feet wide and the footpaths—one on either side—11 feet wide.

The structure has rusticated joints and is in every other way characteristic of good bridge construction. This work is being done by the city of Buffalo.

### FORESTRY BUILDING.

#### UNIQUE STRUCTURE AT THE PAN AMERICAN EXPOSITION.

The building provided for the forestry exhibit at the Pan American Exposition is an object of unusual interest on account of its peculiar style of construction.

The walls are formed of sections of trees indigenous to different Pan American countries, and the roof of bark slabs. The foundation is of random rubble work, laid with large stone, with large granite boulders for the footing of exterior posts and angles. To the visitor it has the appearance of structures found in out-of-the-way regions where construction is accomplished by men with the axe their only tool. Thus the building which has been provided for the housing of one of the most important displays at the Exposition is made a striking exhibit in itself. Its dimensions are 66 by

four to twenty-four by thirty inches, and the transparencies are from three by four to six by ten feet.

The subjects to be illustrated by bromides and transparencies comprise briefly the various methods of lumbering, their effects on forest production and on the adjacent agricultural lands. The effects of forest fires on the forest land and the relation of such denudation to the flow of water in streams and the supply of water for irrigation will be fully shown. The principal types of trees and forests will be illustrated to show the size and lumber production of forests occupying agricultural and non-agricultural lands. The value of preserving certain types of protective forests on watersheds for the conservation of water important to adjacent large areas of agricultural lands will also be illustrated. A special feature of the photographic display will be the illustration of individual trees of the mammoth Bigtree, the Giant Red Firs, White Firs and the Sugar Pines of the California Sierras forests by colored transparencies six by ten feet. It is interesting to state in this connection that these transparencies are the largest ever made. Typical agricultural valley lands in the East and West will be illustrated on

the same scale, showing the special protective agencies of natural adjacent mountain forests and planted shelter belts of forest trees. The region and the subject from which these illustrations were taken are representative of the principal agricultural and forest sections of the United States.

Fourteen colored maps of the United States will show the distribution of the principal forest types and species, the distribution of rainfall in relation to that of forest areas and in connection the location of State Experiment Stations.

Nineteen large slabs, four feet high and six inches thick,

rant purposes, and the lower portion to the exhibition of dairy products, which will include an extensive collection of modern machinery and apparatus.

An extensive mechanical refrigerating plant will supply certain uniform temperatures in the different divisions of a glass refrigerator case extending through the center of the building. This case will be eight feet high and twenty feet wide, in which will be displayed the different products of the dairy. Some, such as cheese, will be shown in process of curing, while others will be merely preserved.

with bark attached and one surface polished, show the size, quality and character of the commercial timber trees of the Appalachian forest region.

#### DAIRY FEATURES AT THE PAN-AMERICAN.

The Model Dairy Building at the Exposition is situated in the northeast section of the grounds. It is near the Sta-

Apparatus and machinery of all kinds for use in and about the dairy will be displayed about the sides of the building, where they will be accessible for inspection and the application of power.

One of the most interesting exhibits of the whole Exposition will be given in connection with this department. Mr. Converse, who has charge of the dairying and live stock

dium and is separated from the Agriculture Building by the Grand Canal. Fronting on the Mall, it has a width of sixty feet, extending back toward the Stadium one hundred and fifty feet. It is two stories in height, having a balcony on three sides. Staff will be used in the construction of this building on the same general plan of all the Exposition buildings, the decorations differing only in emblems and designs appropriate to the subject.

The upper part of the building will be devoted to restau-

exhibits, has arranged to conduct a model dairy on the grounds. Tests will be made, under favorable conditions, of eight or nine different breeds of dairy cows. These tests will be conducted with the utmost fairness with animals furnished for the purpose by the different associations. Experienced men will have charge of the feeding and general care of the cows. Such persons will be without personal financial interest in any to bias their views or actions. The tests will be conducted over a period of six months,

under the best conditions, to bring out the good qualities of all without forcing. All feed will be analyzed for nutrition and weighed as fed, and a careful record kept. Results reached by this method will be valuable as well as interesting.

As in all departments of the Exposition, that of dairying will be up to date in apparatus and methods, and educational in its scope. Anything new or valuable will be carefully illustrated for the benefit of the general public. Bacteriology will be a feature. Advanced dairymen study bacteria with as much zeal as the medical scientists, though with a different object.

Butter flavor has been recognized as the product of bacteria. By careful investigation it has been found that some bacteria produce good flavors, while others develop objectionable ones. Experiment has evolved a process whereby friendly culture may be propagated. It is added to the cream at a certain stage and is instrumental in developing a very desirable butter flavor. This, and a great many other valuable new features, will be brought out at the Exposition.

HERBERT SHEARER.

### A Floating Exposition Suggested.

A floating exposition, carrying samples of our merchandise around the world and putting our merchants in touch with those of all nations, seems to me a fitting American enterprise for the beginning of the new century. The nineteenth century has made the United States the greatest exporting nation of the world; why not begin the twentieth by showing to all the world what we have to sell and how to sell it?

Exhibitions of the products of industry have proved beneficial to trade wherever undertaken, whether the ancient "fair" or the more modern "exposition." The traveling salesman with his sample cases has become a necessity of modern mercantile success; "commercial museums" exhibit to the dealers of one country the class of goods required in other lands, and the great European nations now send out "commercial missions" to inquire into and report upon the trade opportunities in distant countries.

But each of these methods has its limit of influence. The fair or exposition is dependent for its success upon the number of people it can attract to its doors, the traveling salesman represents but a single establishment or industry, the commercial museum conveys its information only to the seller and not to the buyer, and the commercial mission gathers information regarding the wants of distant people, but is unable to offer them samples of the goods which its own people have to meet those wants.

Why not combine the valuable features of these various aids to commerce in a single great enterprise—a "floating exposition," which shall carry samples of our merchandise to the very doors of the people whose trade we would foster, and by bringing the buyer and seller into personal contact, establish such mutual understanding of wants and conditions as to facilitate the interchange for which each is desirous?

The imports of Asia, Oceania, Africa, and the American countries south of the United States amount to over two billion dollars every year. Nearly all of these importations are of the very class of goods which we want to sell—foodstuffs, textiles, mineral oils, machinery, and manufactures of all kinds; yet our sales to these grand divisions in the best year of our commerce, 1900, only amounted to about \$200,000,000, or 10 per cent. of their purchases. The annual imports of Asia and Oceania are over a billion dollars, those of Africa over four hundred millions, and those of the countries lying south of the United States about six hundred millions.

Most of the cities, through which these two billion dollars' worth of goods are first distributed lie on the seacoast, and could be readily reached by a fleet of vessels loaded with samples of American products and manufactures. It is well known that the lack of practical knowledge as to the local trade requirements, such as methods of packing, kind of

goods required, length of credit, etc., is the chief obstacle to the introduction of American goods in these countries, and that until this obstacle shall have been overcome we can not expect to obtain the share in that trade to which our location and facilities of production and manufacture entitle us.

If a floating exposition were systematically organized, loading one vessel with exhibits of foodstuffs, another with textiles, another with agricultural implements and vehicles, another with manufactures of iron and steel, another with household requirements, and another with "Yankee notions," and sent from port to port and continent to continent, it should prove highly advantageous to our commercial relations with all of the countries visited.

Every manufacturer or exporter sending an exhibit would naturally send with it a capable representative, who could discuss with the local merchant the qualities of his goods and their fitness or unfitness for local markets.

The coming of an exhibition of this character would attract at each port not only the business men of that city, but those of other commercial centres in the vicinity, and by this process the wholesale merchant of the United States would speak face to face with those of every country visited, and in these discussions would learn in a practical way the obstacles which now prevent a free interchange of commerce and the methods by which they can be overcome.

In addition to this, a corps of experts could gather samples of the goods now being sold in the countries visited, the prices obtained, the length of credit given, the banking and exchange facilities existing, and required, and other facts which would prove valuable not only to those directly participating in the enterprise, but to all manufacturers and merchants of the United States, by their exhibition in commercial museums and by published reports.

Present conditions seem to be exceptionally favorable. The producers, manufacturers and merchants of the United States are greatly interested in the extension of markets for American goods, and the Bureau of Statistics is daily besieged with inquiries for information bearing upon this subject. The past three years have been exceptionally successful, and yet have shown the necessity of finding an increased outlet for the surplus which the American manufacturers show themselves capable of producing, and it seems not unreasonable to believe that they would look upon a reasonable expenditure for the extension of trade as money well invested. A great world's fair has just been held at Paris, at which many Americans made exhibits, some parts of which would be suited to a floating exposition such as has been suggested. A great exposition, especially intended to apply to the people of Central and South America, is to be held at Buffalo this year, and its exhibits would in many cases prove a basis for an undertaking of this kind, while another exposition, especially relating to the West Indian trade, is to be held at Charleston. Thus, in the disposition to extend our commerce, in a prosperity which warrants new business ventures, and even in the partial preparation of exhibits, the circumstances appear to be especially favorable.

O. P. AUSTIN, in *Geographic Magazine*.

She—Did you tell Mr. Luggs my hair was red?

He—I did not.

She—He says you did.

He—I did nothing of the kind. He asked me, and I told him it was the color of a popular novel.—*Detroit Free Press*.

"As I understand it," said Cumso, "oleomargarine is made of beef fat."

"You are undoubtedly right," replied Cawker.

"I should think that the manufacturers would make it of goat fat."

"Why?"

"Because the goat is a natural butter."—*Exchange*.

### Hammocks for this Summer.

"Deliveries of hammocks for the coming Summer's trade," said a wholesale dealer, "have already begun. In fact, we begin sending out hammocks to distant points in the far West in January, and by March 1, hammocks will be going out freely. We begin making deliveries to big retail dealers here in the city as early as April 1. Men out on the road sell hammocks in December.

"The sale of hammocks at retail begins earlier than it used to. People go into the country earlier, and then there are more suburban dwellers and buyers than ever. People begin to put up hammocks now in May. There is, in fact, a dribbling retail demand for hammocks the year round. Somebody going, for instance, to Central America, may come in for a hammock in the middle of Winter.

"In this country hammocks are not so commonly used in the South as they are in the North. But, speaking of them in a general way, more hammocks are sold and hammocks are made in far greater variety than ever before. There are now made, for example, lots of little hammocks for children; and there are made for infants hammocks of canvas having side pieces of the same material.

"There was a time when hammocks were practically all made of cord or twine or of Mexican grass. There are now sold enormous numbers of woven cotton hammocks, this being an American notion introduced fifteen years or more ago.

"These cotton woven hammocks are now made in simply hundreds of varieties. They are of different weaves, and of different sizes and qualities; and they are made in solid colors and in checks and in stripes; and, as to colors, in all manner of combinations and variations. These hammocks are commonly made with balances; and a pillow is a characteristic feature of a large proportion of these American woven cotton hammocks. These cotton hammocks sell at retail at all sorts of prices, ranging from fifty cents to \$6 or \$7 each; and while the variety of them now is almost endless, the manufacturers are producing new variations in addition every year.

"The grass hammock is made in scores of varieties, counting sizes and colorings and qualities. The Mexican grass hammocks sold in this country were once all made in Mexico by hand. Now they are made, almost all of them, in this country by machinery. The very finest and costliest of Mexican grass hammocks are still imported from Mexico, where they are yet made by hand. Some of them are beautiful productions. They would be among hammocks what a fine Panama hat would be among hats. As much as a hundred dollars has been paid for a Mexican hammock of the finest quality and with fringe and other ornamentation, and \$50 would not be considered a very extraordinary price to pay for an unusually fine hammock of this kind.

"At the same time, of course, the very great majority of Mexican grass hammocks are sold at prices from seventy-five cents to \$10.

"Then there are sold among the more expensive hammocks, again, some imported from France, where they are made of Mauritius grass from the island of Mauritius, a vegetable fibre somewhat similar to that of which the Mexican grass hammocks are made. These fine imported French hammocks are made in fancy colors in delicate shades; and costly hammocks have been made of silk. So that, you see, the hammock, simple a thing as it may seem to be, is really made in very great variety.

"Taking them altogether there are exported of American hammocks considerable quantities, including both the cotton woven hammocks and the grass hammocks. We sell hammocks in Australia, South Africa and Great Britain."—*New York Sun*.

The Lady—If my poor mother had only been alive, I should have gone back to her long since.

The Brute—No one deplores your mother's untimely demise more than I do, my dear.—*Ex.*

### Recent Trade Publications.

HARLEV SASH LOCK MFG. Co., 92 La Salle Street, Chicago, Ill., are distributing to the trade a booklet catalogue under the title of "Photographed from Life," exploiting the manifold merits of the Harlev Burglar-Proof Ventilating Sash Lock. Included in the contents of this pamphlet are a number of photographed letters, which in their contents give indication of the security felt by those who have made use of this new sash lock. A number of extracts from various journals testifying to their merits is also included, and the Sash Lock itself is well illustrated, showing clearly the method of application, and the excellence in the way of protection afforded by its use.

NATIONAL CYCLE MFG. Co., Bay City, Mich. 1901 catalogue of National Bicycles, covering their line of models for the current season. This is a pamphlet catalogue of 24 pages, well printed and illustrated on coated paper with full descriptions of their wheels and accessories, special features of the same, and full of information regarding the numerous advantages possessed by this well-known bicycle.

STAR CORUNDUM WHEEL Co., Detroit, Mich. 1901 catalogue "C" of Emery and Corundum Wheels, Grinding Machinery and Polishers' Supplies. Pamphlet catalogue of 48 pages, well printed and illustrated on good paper, with artistic cover, and giving in its contents all the standard prices of regular wheels, emery cylinders and cup wheels, and illustrating the various shapes for saw gummers and moulding knives, showing styles of special wheels for Brown & Sharpe grinding machines, illustrating the Star Safety Wire Web Wheels, with full descriptions of all the goods mentioned, including Diamond hand and lathe tools and a large variety of grinding machinery. Included in its contents is illustrated grinding machinery for foot-power, a class of work now being called for by the Hardware supply trade throughout the country. The contents include a telegraph cipher code to facilitate ordering promptly in an economical manner.

HELLER BROS. Co., Newark, N. J. Pamphlet catalogue, small size, 40 pages, well printed on good paper and fully illustrated throughout by the aid of half-size cuts, covering their line of horse rasps, files and farriers' tools, machinists' hammers and clay crucible cast steel. This well-known company, although established in 1836, was incorporated in 1899. The popularity of their production it is not essential to dwell upon, as there are few Hardware stores in the United States but handle more or less of the goods produced by them, the standard for excellence having always been a good one. Illustrations are given of all the various styles of rasps and files, so that those unfamiliar with their booklets can readily understand what is required. Included in its contents are horse tooth rasps; plain, jointed and adjustable bent incisor tooth files, and the usual variety of machinists' hammers of peculiar shapes, including Scotch pattern driving hammers, corrugated pein sharpening hammers, as well as all the regular varieties of such goods for blacksmiths' and carriage ironers' requirements. Carpenters' pincers are also shown in large variety, including such goods as well as hoof parers, clinch tongs, hoof testers and blacksmiths' pick-up tongs. Attention is called to these because of their rarely being illustrated in a catalogue. It is a very complete little catalogue and will be appreciated by the Hardware dealer who frequently has calls for goods embraced in its contents without always knowing exactly what is required, which information this catalogue can be relied upon to give.

Hoax—What are you thinking about?

Joax—I was just wondering.

Hoax—What?

Joax—Can a man be said to be on a terra cotta bust when he's painting the town red?—*Ex.*

### New England Hardware Dealers' Association.

The regular monthly meeting of the New England Hardware Dealers' Association was held in Boston, Wednesday, April 10th, at the United States Hotel, President Burditt occupying the chair. At the business meeting, which was held immediately after the dinner, resolutions expressing the sincere sorrow of the Association at the death of James W. Vinal were offered by D. Fletcher Barber, accepted and placed on file. The president introduced as the first speaker of the evening W. R. Chester, treasurer of the Massachusetts State Board of Trade, who delivered an address having reference to the lumber business, an industry with which he has been associated for a number of years. President Charles E. Adams, of the Massachusetts State Board of Trade, an active member of the New England Hardware Dealers' Association, delivered an address in which reference was made to the usefulness of commercial bodies and the duties of individuals in allying themselves with such organizations so that each by performing his part might promote the public welfare. Mr. Adams delivered a very interesting address, which was listened to attentively by the members present. Mr. Adams was a member of the Paris Exposition Commission and is chairman of the Pan-American Exposition for Massachusetts. He stated that the business associations of the State had co-operated with the Commission in such a manner as to insure the industrial and commercial interests being well represented at these great expositions. The Pan-American Exposition in Buffalo in 1901, he believed, would afford an opportunity of placing samples of our manufactured products before buyers from other markets that would be of inestimable value to the United States, as they are conveniently located to our shores, and at the present time we control only 10 per cent. of the South American trade. The meeting, before adjournment, tendered Messrs. Chester and Adams a vote of thanks for their interesting addresses. The president appointed the following Entertainment Committee for the May meeting: William E. Plummer, William E. Whitney and E. M. Richardson.

### A News Telephone.

In Buda-Pesth there is a "news telephone," the object of which is to keep its 6000 subscribers supplied with the latest news. The service has a main wire 168 miles long, which is connected with private houses and with various public resorts. From 7.30 in the morning until 9.30 in the evening, twenty-eight editions of news are spoken into the transmitter by ten men possessing loud, clear voices, working in shifts of two. The news is classified, and the service has been eminently successful.—*Scientific American*.

Elsie—Mamma, there's a funny old man in this Pickwick book that's always telling his son to beware of the widows. Why is that?

Mamma—Well, a widow is supposed to be skillful in catching a husband.

Elsie—Gracious! I wonder if I'll have to be a widow before I can get married.—*Philadelphia Press*.

## The Season of Paint Tests.

This is the time of year that the paint you handle is put on trial.

It has to stand severe cross-examination from every person who buys a can; it has to show how it will work under the brush, how it will cover, how it will look and how it will wear.

Do you feel certain that the paint in your stock is going to stand the test? S. W. P. dealers have just that confidence.

## THE SHERWIN-WILLIAMS PAINT

has stood the test every season for thirty years. It will stand it this season. It will make trade and keep it.

If the paint on your shelves now doesn't stand the test, you'll find S. W. P. ready for immediate shipment to help you out.

### About Cast Iron Pipe.

The manufacture of cast iron pipe has now attained the dimensions of a very important industry in the United States, and it is one of the American industries which is reaching out for foreign business in addition to a well-developed domestic business. American pipe has been shipped to fill orders in Scotland, Germany, Russia, Japan, Australia and South America. Inquiries have been instituted by foreign manufacturers in regard to the conditions and details of this industry as now carried on in the United States, and in the following series of articles it is proposed to enter fully into the commercial conditions of the industry, the details of the methods of manufacture, and the forms of pipe and pipe joints used for water and gas mains and other purposes.

In a paper read before the New England Waterworks Association in 1896, by Mr. Jesse Garrett, of the pipe firm of R. D. Wood & Co., there was a history of pipes for the distribution of water, and from this the following particulars are taken as an introduction to the subject under discussion. Lead pipes appear to extend back to the dawn of history. They were used by Archimedes, and carried water to the gardens of Babylon after earthenware pipes had been abandoned as unequal to the pressure. In the earliest construction of waterworks by the Romans, the idea of lead pipe was borrowed from the Greeks. The pipes were made of sheets of lead soldered together, being generally ten feet in length, and from one inch to twelve inches in diameter. They were of various shapes, some cylindrical, but mostly oval, with the seam at the top. Even in those days it was a subject of discussion as to whether the lead pipes poisoned the water. In 1236 a six-inch main of soldered sheet lead was begun at London to extend from springs at Tyburn. About the beginning of the sixteenth century lead pipe was cast vertically in short lengths. Later on, longer lengths were made, the first pipe being cast and pulled up through the mould or

flask until its end was near the inlet gate, the metal of the second pouring becoming fused with that of the first section, and so on to the desired or practicable lengths. The great fire of London in 1666 melted the greater part of the distribution pipes system, after which the lead pipes were replaced by wooden pipes.

Stone blocks, bored out to 13 inches, are mentioned by Herodotus, and it is said were used in the first works for the water supply of Manchester, England, in 1810 to 1814. The blocks were about 2 feet long, with holes 3 inches to 18 inches diameter, and had spigot and socket joints, put together with Roman cement.

Wooden pipes were first used in the time of Pliny. The New River Company, of London, which was chartered about 1600, had a distribution system of 400 miles of wooden pipe. They were of the usual style of pump connections, coated in a bath of lime water, and the socket joints were made tight with whiting and tallow. These pipe logs were replaced by cast iron pipe as early as 1820, at a cost of some £300,000. The first waterworks of Philadelphia, United States of America, used wood for distribution pipes until after the beginning of the nineteenth century, when their replacement by cast iron pipe was begun. The earliest waterworks in the United States, however, were at Boston, built in 1652. In 1796 water was brought to the city from Jamaica Pond, by a pipe of four pipes of pitchpine logs, two of 4 inches and two of 3-inch diameter of bore, the combined length being about fifteen miles. Not till 1840 does it appear that wood was superseded by iron in that city, when a 10-inch main was laid to Bowdoin Square. The waterworks of Detroit, United States of America, first delivered water in 1827, and had the water pumped to a plank reservoir 16 feet square and 6 feet deep through pipes of tamarack—or larch—logs, 4 1-2 inch bore. In 1830 a new engine supplied water to the reservoir through a 3-inch cast iron pipe. Wooden pipes were used more in the State of Michigan, originally a great timber State, than in any other part of the country.

In 1685 the first cast iron pipes were used for the water service of Versailles, France, and these were followed by screwed and flanged pipes. In 1835 it was estimated that over 1000 miles of iron pipe were in use in London, the first having been laid in 1746 on account of the increase in service and pressure. Later on cast iron pipes, 9 feet long and 15 inches in diameter, with ball and socket flexible joints, were laid by James Watt across the Clyde for the conveyance of water to Glasgow. In 1818 another of the same size was laid, and afterward still another of 36 inches diameter. The earliest cast iron pipes were 2 1-2 feet long with bolted flange joints and leather gaskets. These were followed by longer pipes with screw joints, after which came socket joints turned to a slight taper, luted with tallow and whiting and driven together. Later on the length was increased to 9 feet, and the bell, or hub, and spigot joint was introduced, the joints being first packed with wooden wedges, but afterward with lead. The bell-and-spigot pipe is now almost universally employed in the United States and Europe, though the turned and bored joint is still used to some extent. Joints packed with wood are also still employed in a few instances.

In 1809 and 1849 English patents were granted to Anthony George Eckhart and Andrew Shanks respectively for casting metals in revolving moulds. For pipes, the ends of the moulds were nearly closed by plates covered with loam, an opening in the plate at the socket end being left for pouring the metal. The mould was set horizontally resting on friction wheels, by which it was revolved rapidly, the centrifugal force distributing the metal over the interior surface of the mould. As soon as the metal was cool enough to retain its form the mould was opened and the pipe removed. One mould would serve for casting several pipes. This method is said to have been in use at one time at Baltimore, U. S. A. In another English method, used to a limited extent, the

flasks were attached to a revolving turntable, the moulds being rammed and poured at different parts of the pit, and the pouring spout being stationary, no ladle being used.

The first cast iron pipes made in the United States were cast at the Richards Iron Works at Weymouth, N. J., about 1820, and were 16 inches in diameter. This was for the city of Philadelphia, replacing the old pine log pipe for the force main from the pumping station to the reservoir, but wooden pipe continued to be used for the distribution system. The iron was made direct from a melting of New Jersey bog ore, and the pipe was cast in moulds laid horizontally in the casting beds where pig iron was usually cast. The small blast furnace was tapped in the usual way, and when the stream of molten iron had filled one mould, it was diverted to another, any surplus metal being used for pigs. These pipes were made under the direction of Mr. Frederick Graff, engineer of the Philadelphia waterworks, whose son succeeded him in office and held the position for many years. The industry then lay dormant for about ten years, or until 1830, when pipes from similar ore were made in the same way at the iron works in Millville, N. J. They were cast on their sides, a series of six or eight gates being used to run the iron from the furnace into the moulds, these gates being shut off at the proper time, and the flow of iron continued to another series or to the pig beds. The joints were of the bell-and-spigot type, not differing essentially from the present form, except that the bell is now usually somewhat deeper. These works were owned by Mr. David Wood, who, foreseeing the demand for cast iron pipes and the disadvantage of casting such pipe under the existing methods, designed and constructed a special foundry for its manufacture. In 1845 he was succeeded by his brother, Mr. R. D. Wood, who enlarged and extended the plant from time to time. A description of these works will be given further on.

About 1,860 attempts were made to return to the original practice of casting pipe with iron direct from the blast furnace, but the experiment proved a failure. Pipes were first cast vertically about 1851, at Conshohocken, by Bell and Colwell, these being 30-inch pipes for Boston. Previous to that time the pipes had been cast horizontally, or inclined at an angle of about ten degrees, and as late as 1873 this practice was still continued for the smaller sizes of pipe. The early moulds were made from green sand, rammed up in two-part flasks. The cores were made by plastering green sand on a hollow core bar or spindle, the spindle being revolved on its axis and the "mud" trimmed to the proper diameter and surface by a striker or core board held against it and extending its full length. In 1860 dry sand cores were used to some extent, as well as green sand cores.

It is estimated that there are now in the United States some 60,000 miles of cast iron water mains, and that the annual output of cast iron pipe since 1896 has amounted to 500,000 tons of water pipe and 100,000 tons of gas pipe.—*London Engineer*.

### Paper a Valuable Side Product of the Sugar Plantation.

The proposition that the waste and refuse of to-day is the raw material of to-morrow in modern industries, is as true in connection with paper manufacture as in everything else. For instance, the pulpy mass called *begasse*, which is left after the sugar cane has been crushed and squeezed dry of its saccharine matter, and formerly was burned and got rid of as a nuisance, is now used for the manufacture of paper. A great sugar firm in Texas have two paper mills which make several grades of paper out of *begasse*, and the business is so profitable that they are about to open new mills.—*Exchange*.

"Jack was more than half an hour trying to persuade me to name the day."

"Did you give way?"

"Yes. I was afraid the chair would if I didn't."—*Ex.*

### Iowa for Iowans.

In the initial number of *The Iowa Tradesman*, published in Davenport, Iowa, we find an article from the pen of our old friend and correspondent, Col. J. R. Nutting, of the Sickels, Preston & Nutting Co., of that city, which we transfer to our columns. He takes the motto of the *Tradesman* for his text, "Iowa for Iowans," and discourses pleasantly as follows:

We congratulate the management for selecting this most opportune time to offer the assistance of a live up-to-date trade magazine to the merchants and manufacturers of this great and growing State. That it will fill a long felt want, cannot be doubted, and it should, and we verily believe it will receive substantial aid from the people to whose interest its efforts will be energetically devoted.

Nature has done much in contributing to our comfort and welfare productive soil, pure water and beautiful scenery.

The tillers of the soil have already placed the name of Iowa first in the list of States of agricultural importance.

Our statesmen have become leaders at the National capital. Our schools and institutions of learning have placed our people the highest on the list of education and literacy.

Our peace officers have so well preserved order as to warrant the statistician in marking Iowa as the lowest on the list of crime.

Our railroad facilities are unexcelled and are equal in extent, perhaps, to those of any of the States, considering the number of square miles contained within its boundaries.

In fact, the people in nearly every calling in life, aided by the beneficent hand of Nature, have secured for this State a name that occupies a high place among the many grand and noble States of this great Republic.

Unfortunately, however, our merchants have not attained so much comparative commercial importance as has been achieved by many other classes of our citizens; and belonging to this class, we dislike to enter up this verdict against ourselves, but common honesty compels us to do so.

If we wish this unhappy verdict set aside, the time for action is now; the opportunity is here. May we quote what Senator J. J. Ingalls declares opportunity to be:

#### OPPORTUNITY.

"Master of human destinies am I;  
Fame, love, and fortune on my footsteps wait,  
Cities and fields I walk; I penetrate  
Desert and seas remote, and passing by  
Hovel and mart and palace, soon or late  
I knock unbidden once at every gate;  
If sleeping, wake; if feasting, rise before  
I turn away. It is the hour of fate,  
And they who follow me reach state  
Mortals desire, and conquer every foe  
Save death; but those who doubt or hesitate,  
Are condemned to failure, penury, and woe,  
Seek me in vain, and uselessly implore  
I answer not and I return no more."

Opportunity is now knocking at the doors of the merchants and manufacturers of Iowa, and must be promptly welcomed and embraced before it is everlastingly too late.

Opportunity suggests that, as a State, if we wish to attain commercial importance, consumers of merchandise should patronize as much as possible the dealers in their own immediate neighborhood, thereby encouraging the development and building up to a prosperous condition every hamlet and village and town within our borders.

Opportunity urges the people of each town, village and hamlet to patronize as far as is consistent with their interests the cities that are making such a desperate struggle for a position in the race for commercial recognition among the cities of other States, and particularly in those States adjoining our own.

Opportunity seems to have encircled Iowa in its travels before knocking at our commercial gates.

Opportunity implores our citizens to encourage manufacturing of every kind, and in every way, especially in the manufacture of articles that are in daily use on our farms and in our homes and shops. This encouragement should commence by demanding of dealers brands of goods that are already made here. The writer has in view one line of goods that is made in this State that is equal in quality and finish to any brand in the same line made in the world. Yet, without any reason except wilful ignorance of comparative merits, the consumers insist upon using a brand that is made far east of the Hudson River, compelling this house to buy in carload lots and send money away for the same that rightfully, morally and economically belongs to Iowa.

We do not get the most out of our agricultural resources, we send our grain away from home, and then send our money to buy the manufactured products of the same. We ship our hogs, sheep and cattle and then go outside of the State to buy hams, bacon, lard, mutton and beef. Only last week one of our evening newspapers announced that the contract for meats for furnishing some of our State institutions had been awarded to parties of another State. When we make the most of our opportunities, everything that we eat, drink and wear that is made from the products of our fields and farms will be manufactured here.

It may be that with the assistance of *The Iowa Tradesman*, our merchants and manufacturers may learn how to develop more energy, more enterprise, adopt new "up-to-date" modern and improved methods of trade, become more loyal to the people of their own State, and to be to themselves more true.

### An Interesting Guide to Mexico.

A new and revised edition of the "Standard Guide to Mexico City and Vicinity" has just been published by *Modern Mexico*, St. Louis, Mo., and Mexico City, Mexico. It is a well-printed pamphlet of 164 pages, profusely illustrated with handsome reproductions of scenery, people, paintings and places. Robert S. Barrett, who compiled this really valuable guide, has gathered his material from the best available sources. In addition to much interesting historical matter, he supplies the tourist with practical information on how to reach Mexico; hotels and their prices, changing money, and just how and when a visitor can best see the sights of the old Aztec capital. Barrett has added also a chapter on "Side Trips From Mexico City." Price, 50 cents.

### New York State Hardware Jobbers' Association.

A meeting of the New York State Hardware Jobbers' Association was held in Elmira at the Hotel Rathbun on April 10th. The meeting lasted from 2 to 5 o'clock in the afternoon. A banquet was enjoyed in the evening at the Hotel Rathbun. Hardwaremen from all over the State were present at the meeting and banquet. Representatives of the following firms were present at the meeting and banquet: J. M. Warren & Co., Troy; Charles Millar & Son, Utica; Albany Hardware and Iron Co., Albany; Burhans & Black Co., Syracuse; Syracuse Hardware and Iron Co., Syracuse; Weaver, Palmer & Richmond, Rochester; Mathews & Boucher, Rochester; Weed & Co., Buffalo; Babcock, Hinds & Underwood, Binghamton; Wright, Dana & Co., Utica; A. E. Bonesteel, Troy; Sidney Shepard & Co., Buffalo; Phelps, Straw & Co., Wilkesbarre, Pa.; Barker, Rose & Clinton Co., Elmira; Irving D. Booth, Elmira. The officers of the Association are: President, J. W. Black; vice-president, James H. Boucher; secretary and treasurer, S. J. Weaver. Directors, Frederick Barker, Charles M. Wells.

"Won't you give me that new baby brother of yours, Nellie," asked a visitor of a little four-year-old miss.

"No, indeed!" replied Nellie, "I want him to play with. But I'll get you a piece of paper and you can cut a pattern of him."—*Chicago News*.

## RECENT TRADE PUBLICATIONS.

GOODELL Co., Antrim, N. H. Twelve-page booklet, envelope size, entitled "Crumbs," exploiting the many advantages and desirable features of the Lee Bread Crumber. This is written in a very entertaining and instructive manner, and in a style that would inspire close attention and thorough perusal. The impression gained by its perusal will be a good one that no more desirable specialty for universal sale was ever devised than the Lee Bread Crumber. There are so many positive advantages in a domestic way that would result from the possession of one of these novel appliances that it would be to the interest of every Hardware dealer in the United States to inquire more thoroughly into the merits of so ingenious a household specialty.

F. A. SMITH MFG. Co., Rochester, N. Y. Ten-page booklet having reference to the Gas Saver, which is the name given by them to a mantle similar to that used by the Welsbach, but constructed on an entirely different principle. It is claimed to be a strictly high-grade mantle for natural or artificial gas or gasoline. It is made in single and double weave, the double weave being recommended above all others because it is less liable to breakage, lasts longer and having more substance, emits a more intense light. These are furnished mounted or unmounted for instant application, and are no doubt worthy the attention of those handling similar goods.

NORTH BROS. MFG. Co., Philadelphia, Pa. Envelope-size catalogue of 24 pages, with neat cover, the contents printed on yellow paper in a very characteristic manner, and embracing their line of Lightning and other Freezers for the trade of 1901, showing a full and complete line, giving perfect descriptions of the various kinds, so that intelligent ordering may be the result without the necessity for seeing samples. Included in the contents, a line of large-size Freezers for confectioners, hotels, restaurants, etc., is shown, which includes the Philadelphia-Seaman 40-quart power Freezer, which is so well and favorably known to confectioners and manufacturers of ice cream. Full descriptions are given of this powerful Freezer. A line of packing tubs, which form a portion of their separate product, is also given, and steel-clad packing and carrying-out cans, ice cream brick moulds, and ice cream dishers, which are also included in the contents of this desirable little pamphlet, which is very complete of its kind.

GEORGE M. CLARK & Co., 72-76 Lake Street, Chicago, Ill. Pamphlet catalogue of 32 pages, with very artistic cover, devoted to the Jewel Gasoline Stoves for 1901, which are among the important manufactures of this well-known plant. As is the fashion among stove manufacturers, this catalogue, although a pamphlet of limited dimensions, is artistically illustrated throughout with perfect half-tones, showing the various appliances of this character which form a portion of their product, marketed under the name of the Jewel, including the Smokeless Generator Range, Step Stoves, Safety Stoves, Camp and Yacht Stoves with generator, and a similar line with Giant Burner. Embraced in the contents are the Acme Stoves and Stationary Tanks, the Jewel Process Stoves and Ranges, a line which also includes Step Stoves, etc., etc. A number of extras in connection with this line of desirable goods are also illustrated, together with the Jewel Gas Instantaneous Water Heater recently brought before the public, which is graphically illustrated.

PITTSBURGH STOVE AND RANGE Co., Successors of Graff & Co., Pittsburgh, Pa. Attractive 1901 catalogue in pamphlet form, of 114 pages, with an artistic cover, and embracing in its contents an illustrated price list of the Graff Stoves and Ranges, a special line of goods manufactured by this company, which includes the latest improved styles of Steel Ranges for hard or soft coal or wood, made in either right or left hand, fully up to date, handsomely illustrated, showing the superior workmanship of each particular pattern. This is followed by the Jewel Grafton Ranges in cast iron, handsomely nickel-plated with porcelain-lined reservoirs, etc., the entire contents giving evidence of care in compilation, and leaving an impression of the extent and quality of the product of this company that would naturally add largely to their sales.

NEW YORK SPORTING GOODS Co., 61 Nassau Street, New York. A very complete catalogue in pamphlet form of over 80 pages, embracing a large variety of Bicycle and Automobile sundries and fittings, rubber tires, tools, bicycles, guns and accessories and novelties. This catalogue has evidently been prepared for the special requirements of the mail order department, and export demands, for which purposes they are in admirable condition to respond, having purchased from A. G. Spalding & Brothers their entire New York bicycle sundries stock, together with their good will and list of customers. This is a stock amounting to nearly \$5000, which gives them a good foundation for the catalogue under review. A number of the goods usually carried in a stock corresponding to this are offered at bargain prices that might prove of interest to our readers should they open up correspondence in regard to the same.

MIAMI POWDER Co., Xenia, Ohio. An extremely handsome pamphlet catalogue of 50 pages, having reference to the product of this company, which includes Alarm Sporting Powder, Blasting and Mining Powder; also Aetna Dynamite and Aetna Gelatine and Contractors' Powder; Electric Fuses and general supplies for blasting purposes. This is one of the handsomest catalogues in connection with the powder business that we have had brought to our attention, beautifully printed on coated paper, and filled with perfect half-tones running through the text in the most artistic manner imaginable. Under several heads throughout having reference to the special product of the company, definite information is given regarding the uniform and excellent quality of the same. The catalogue is well worthy of preservation by the Hardware dealer handling such goods.

ANTHONY WAYNE MFG. Co., Fort Wayne, Ind., and St. Louis, Mo. Oblong catalogue of 34 pages in which are fully illustrated and described the line of Anthony Wayne Washers which have been before the trade for a number of years. These are shown in great variety, covering all the possible wants of the Hardware and House-Furnishing goods trade. In connection with each washer is also a page giving all the parts contained in the individual washer, every part properly numbered and illustrated in an intelligent manner so that repairs may be readily obtained at any time. This is an important feature of a catalogue of this kind, as it is frequently the case some little repair is required in an article of such general use, and the ordinary dealer can give only an inadequate description of the particular part. By the aid of pages of this description, it is readily accomplished, and the delay of a day or two only is caused under the circumstances.

## NEW GOODS AND SPECIALTIES.

### Northwest Window Screen Frames.

A. J. Phillips Co., Fenton, Mich., in addition to the styles of Window Screen Frames for the manufacture of which they have been long noted in the trade, are placing upon the market something new in this particular line under the name of the Northwest Window Screen Frames. These frames are now provided with a new design of cast iron Berlin bronzed brackets, and are also packed with suitable lifts, adding greatly to their attractiveness, and also to their utility, together with the necessary nails and brads for the construction of the frame, and for putting on the moldings, which are furnished in order to cover the edges of the wire cloth. Slide sticks are also furnished for the purpose of attaching these frames to the window casings. This frame is made of soft

NORTHWEST WINDOW SCREEN FRAME.

wood, and is stained in imitation of walnut, or in oil natural finish. The sticks are shouldered and the nail holes are bored at the corners. The sticks, slides and moldings for each frame are tied in bundles, 36 sets in a case. The sticks are of such a form that when the wire cloth is tacked on, in accordance with instructions, the nailing down of the molding draws the cloth "as tight as a drum head," making it a very complete equipment for people desiring to make their own window screen frames. The Northwest Frames are marketed by being packed in cases of three dozen each.

### No. 1 Lawn Sprinkler.

Landers, Frary & Clark, New Britain, Conn., and 82 Chambers Street, New York, are the manufacturers of the Lawn Sprinkler illustrated in connection with this article, which is marketed under the name of the No. 1 Lawn Sprinkler. The perforated brass head is so constructed that the pressure

No. 1 LAWN SPRINKLER.

of water causes the head to revolve with great rapidity, enabling the Sprinkler in its revolution to sprinkle a circle 30 feet in diameter. The body is constructed from iron pipe, and the spike of malleable iron. These parts are painted red. All the working parts of the Sprinkler are of polished brass. The entire Sprinkler is 3 feet in length. In its construction there is nothing to get out of order, and its peculiar shape and capacity enable it to be used in many places that would be difficult for many competing Sprinklers to reach. In appearance it is handsome, in its action effective. In its construction it possesses a durability that is desirable, and it is placed on the market at a moderate price.

### "Quick and Easy Selling" Specialties.

Erie Specialty Co., Erie, Pa., are placing on the market a new Champagne Tap that is claimed to be absolutely gas tight and readily cleanable, and under the circumstances making it possess all the possible sanitary points needed in an article of this description. The small point which falls into the bottle, see Fig. 1, after the tap is inserted is made of tin, which insures a free flow of the liquid, and by removing the screw valve, see Fig. 2, it is easily cleaned. This in connection with its use in the sick room or in hospital service, is an important feature. It is constructed in a man-

FIG. 1.

FIG. 2.

ner that makes it of limited dimensions, being about half the size of the ordinary make of champagne taps. Each one is marketed by being placed in a fancy box with gimlet for its proper insertion, and half a dozen of the small points referred to above, together with full directions for its use. Among the numerous other specialties manufactured by the Erie Specialty Co., we give an illustration herewith of Walker's Quick and Easy Lemon Squeezer, which has been greatly improved over the previous model. It is now provided with a glass juice receptacle for receiving the juice after being thoroughly squeezed under an aluminum crusher

FIG. 3.

in a cup also formed of aluminum, before entering the tumbler, so that in no event does it come in contact with the iron metal. This insures absolute purity and perfect cleanliness. The appliance is also adjustable, so that the fruit may be squeezed as dry as the operator may desire.

**Warren's Glass-Front Seed Cabinet.**

The J. D. Warren Mfg. Co., Masonic Temple, Chicago, Ill., have recently added to their extensive line of store equipment a Glass-Front Drawer Seed Cabinet, of which we give an illustration. It is constructed from antique oak, with the drawers laid out in different sizes to suit them for the various kinds of seeds. Its method of construction greatly enhances the sale of such seasonable goods, and as the drawers are made with sample boards covered with felt, sim-

WARREN'S GLASS-FRONT SEED CABINET.

ilar in this respect to the construction of the Hardware cabinets, when the seed season is over they can be used for any special line of Hardware goods that it may be desired to utilize them for. An effort has been made to construct these on the line of sizes that have made the standard size cabinets popular, so that they would not be out of harmony with any other cabinet shelving furnished by this well-known manufacturer of such appliances.

**Herrick's Improved Screw Case No. 2.**

In a recent issue of *Hardware* we gave a notice of Herrick's Improved Screw Case No. 4, provided with 224 bins. The F. A. Herrick Co., Jackson, Mich., have recently added a new Improved Screw Case No. 2, provided with two sections and containing 112 bins. This will undoubtedly meet a general want throughout the trade for such an addition to the equipment of a small Hardware store, and we give an illustration of the new screw case herewith. It is intended to hold 112 different sizes of screws. Up to  $1\frac{1}{2}$  inch, two gross

HERRICK'S IMPROVED SCREW CASE No. 2.

of each size can easily be put in each bin. It is designed to be placed on the counter, occupying as it will but 14x28 inches. It is 39 inches high, and weighs when packed ready to ship 85 pounds. There is no perceptible difference between

this case and the No. 4 previously referred to, except in the fact that it is made in two sections instead of four. Should it be inconvenient to place the screw case on the counter, it may be placed against the wall in connection with the usual shelving, and would in this way make a very desirable case for the average Hardware store.

**Farmers' Hay and Straw Press.**

The Chain Stay Fence Co., Toledo, Ohio, are the general agents for the sale of the Farmers' Hay and Straw Press, manufactured by the Beery Mfg. Co., Upper Sandusky, Ohio, which embodies in its construction as a full circle press the most simple and perfect power possible to be applied to a Hay, Straw and Fodder Press. It is intended to be operated by one horse. The power is made of the best of native hard timber, and the press box of the best hard maple and beech,

FARMERS' HAY AND STRAW PRESS.

and are firmly bolted together and placed upon the market nicely painted and striped. The iron used in its construction is estimated to stand double the strength of one horse. The plunger is carried forward by two arms of unequal length, the greatest amount of leverage being at the latter end of the throw, and where needed, which makes the final press. These arms have anti-friction rollers, working on steel pins on the end. Both together throw the plunger 22 inches, which is brought back by means of a coil spring and the rebound of the hay, and this remains back while the horse goes one-third the way around. In the operation of the press the horse only travels one-half the distance to the round that he does on larger presses, and can confine the work to a floor space of 16 feet square. In the construction the mechanism is so arranged that the pull comes on gradually, and is relieved in the same manner, the pull being reduced to such an extent before the plunger lets go the horse is not jerked or pitched a particle when relieved of his load. It is claimed that this patent power is so constructed as to give the horse a leverage of 40 to 1, so that if the horse pulls 500 pounds he puts a 10-ton pressure on the plunger. Seven tons on the plunger will bale hay tight enough for shipping, so that any ordinary horse, it may be considered, can do the work. A guarantee accompanies the sale of these hay presses, that the company will furnish free of charge any piece or part of said machine that may break on account of flaws or lack of good workmanship within six months from time of purchase.

**Savage Magazine Tack Hammer.**

The Magazine Hammer Co., Utica, N. Y., are the manufacturers of the Savage Magazine Tack Hammer, an illustration of which we give in this article. For a number of years it has been the desire of the inventors to invent a Magazine

SAVAGE MAGAZINE TACK HAMMER.

Tack Hammer that would meet all the requirements considered desirable for such a device. The present tool which we have under review is the nearest approach to an article of usefulness of this peculiar construction. Its complete

success makes it an extremely useful article for all who have occasion to lay carpets or perform decorative work requiring the use of tacks. It is so constructed that it is ready at any time for instant use. The Hammer is fitted with a magazine, which holds between 60 and 70 tacks of a suitable size. By pulling the trigger, located in a convenient position on the under side of the handle, a tack is automatically taken from the magazine, and placed on the face of the hammer-head, where a horseshoe magnet retains it in the proper position until driven. As the tacks do not have to be held or placed in position, there is no danger of striking the fingers. Only one hand is actually required to operate the Hammer, thus leaving the other hand free to hold in position the material to be tacked. There is no temptation to adopt the dangerous custom of holding tacks in the mouth, which is one of the advantages claimed by the inventor. It is simple in its construction, is made in a strong and thoroughly practical manner, its action is positive, and with reasonable care, will not be likely to get out of order, although if through accident any part is broken or lost, duplicate parts can be obtained at a nominal cost from the manufacturers. A useful part of this tool consists in the method of applying the magnet to assist in the work. It is claimed that good magnets will last twenty years or more, unless they come in contact with dynamos or are made red hot, so that the usefulness of a tool of this description is not impaired by the necessity for using a magnet in its construction. At present the manufacturers are making but one size suitable for the use of a No. 6 and No. 8 carpet tack. If smooth tacks could be obtained, it could also be used on No. 10, but it is not deemed advisable, as they are somewhat too large for the Hammer under review, and are apt to stick in the magazine. The company desire to sell their entire product through dealers in Hardware or Housefurnishing goods, and would be pleased to correspond with any dealer interested in the sale of a specialty of such undoubted usefulness, and so original in character, it being without competition.

#### Swedish Razors.

The Smith & Hemenway Co., 296 Broadway, New York, who are sole agents in the United States for John Engstrom, are placing on the market two new patterns of razors. The No. 7 is a full hollow ground barber's straight back razor with perched tang. It is nicely finished, honed and set ready

FIG. 1.

for shaving. The No. 17 is one of John Engstrom's latest productions with an extra thin blade, this being hammered to a point where it is impossible to grind it thinner and get the desired results. The construction of this razor is very unique. It is made entirely different from the regular concaved razors, and is so constructed that it will shave any kind of stiff beard. Perhaps it would not be amiss to give our readers a few pointers on how this razor is manufactured. A bar of steel is hammered into the shape of the blade, then ground, tempered and tested to see if it has the proper cutting qualities. Should it not have, it is then thrown away (the cost up to this point being comparatively small). If, on testing, it is found to be up to the standard, it is then put into a frame back and handled ready for the market. We are informed by the selling agents that Engstrom's old patterns of goods have been on this market about twenty-five years, and that, almost without a single exception, they have given universal satisfaction. At the present time they im-

port about twenty different styles of the Swedish razors to this country. The opinion has long prevailed in the trade that the Swedish razors were only frame back, but we are informed that this is a mistake, as Engstrom produces some

FIG. 2.

of the finest concaved goods, including the Little Red Devil Ran-Tan-Ka-Rus Razor imported by the above firm, as well as the other concaved styles. Dealers interested in a line of fine tools and Hardware specialties will find the "Green Book," published by the above company, a valuable addition to their catalogue cabinet. This will be sent gratis to the trade on application.

#### The Family Cherry Stoner.

As the fruit season begins to draw near, the dealer naturally is interested in seasonable machines and utensils for the use of those who "do up" fruit of various kinds. First and foremost will come the cherries, and the dealer should see that his stock is supplied with a good Cherry Stoner. He should see to it that the particular kind he sells is such as he can conscientiously recommend and then should make it a point to let his patrons know that he has the right article. A Cherry Stoner that will remove the stones from the ripe

THE FAMILY CHERRY STONER.

cherry without tearing or crushing the fruit, leaving it plump, round and full of juice, is a household article with which there is good opportunity to make money. Such a device is the "Family" Cherry Stoner, made by Goodell Co., Antrim, N. H. A machine small, but efficient, of low cost and simple of operation. It is claimed by the manufacturers that whenever and wherever exhibited, the "Family" has always taken first prize and this includes the World's Fair at Chicago.

#### Stevens' Spray Pump.

Stevens & Co., 99 Chambers Street, New York, are the manufacturers of the Stevens Spray Pump, an illustration of which we give herewith. This is a very desirable article for the Hardware trade to handle, as it is called for by a steady demand throughout the season. These Sprayers are made in three different styles, No. 1 being all tin; No. 2 a tin cylinder, but with a brass tank, buffed and lacquered, while the No. 3 is made entirely from polished brass and is also nicely buffed and lacquered. All the caps and handles on these sprayers are black enameled, the enamel being baked

# PATENTS

Preliminary Consultation Free.

HENRY J. MILLER,

55 Equitable Building,

BOSTON.

on, making a fine finish. The No. 3 Sprayer, made from solid brass, is finished in an exceedingly perfect manner, and calculated to retain its beautiful finish, even if carried in stock over the season. These Sprayers are all wrapped up separately, and packed one dozen in a crate, so that they come to hand, when ordered, in excellent order, and present a

STEVENS' SPRAY PUMP.

fine appearance. In the construction of the article, the manufacturers state they have let the end of the air cylinder down into the liquid tank, which enables a strong construction to be secured, and a plunger stroke the full length of cylinder, permitting the Sprayer to be larger in capacity, both in air cylinder and liquid tank, than a number of competing styles, at the same time occupying a less space in shipping and storing the same. Then, again, it is mentioned, the construction is such that if by careless workmanship in making or by any unforeseen accident the little tubes should get out of position so that it does not spray properly, it may be fixed instantly by any person, requiring no tools but the fingers. The manufacturers also make a small sprayer which is less than half the size of the regular style, for which a ready market has been found, and it has proved to be a popular seller. This smaller article, made in tin, is their No. 4, and made in brass is their No. 5, this size of Sprayer being designated for household use, and is found applicable for the spraying of house plants, roses, etc.

#### Reverse Head Closer.

The Union Hardware Co., Torrington, Conn., (Tower & Lyon, New York), in their new Gun Implement Catalogue referred to in our previous issue, show, among other new goods of importance, a Reverse Head Closer for crimping

REVERSE HEAD CLOSER FOR CRIMPING PAPER SHELLS.

paper shells, the crimping head of which is provided with pins on either end, one for crimping square and the other round crimp. By a very simple and yet effective device, this head may be taken out of the closer, reversed, and put in position again.

By the use of an adjustable stop, shells may be crimped to any especial length desired, and any shells having a uniform load may be crimped to an equal length.

Attention is called by the manufacturers to the automatic extractor, which, as will be seen in the cut, is very simple and positive in its action, the shell being withdrawn from the closer by an outward movement of the lever.

This Closer is furnished in 10, 12 and 16 gauge; finished in black enamel, with nickel trimmings and handles of Cocobolo Wood.

#### Curiosity and Science.

Curiosity, it may be safely said, is the handmaid of science. And to the men who have found something mysterious in the common occurrences of life, and whose curiosity has been sufficiently aroused to unravel the mystery, we owe much of the progress we have made along almost every line of thought. It is true that the explanation of the mystery may require an extraordinary logical power and an imagination with which not all of us are blest. But, nevertheless, the process of reasoning which has led to the greatest discoveries may be largely attributed to the very human impulse of inquisitiveness.

No doubt many a man before the time of Columbus had remarked the exotic fruits and branches tossed up by the waves of the Atlantic on the shores of the Canary Islands. Such fruits had never been seen in the Old World; yet the islanders had picked them up from time immemorial with never a serious thought as to whence they might come. But the Genoese mariner had both curiosity and imagination. To him these strange gifts of the sea became messages sent from a land which no European ship had ever touched. It may be that he was mistaken in his conception of that land; but the fact remains, if the story can be credited, that it was from seeing these strange things that the voyage of exploration which culminated in the discovery of the New World was first planned.

Then we have Newton's apple. It matters little whether or not the apple did fall, or opportunely strike Newton while he was sitting in his garden. Things have fallen ever since the universe was created. And yet no man seems ever to have asked himself why.

Robert Mayer, a ship's surgeon, cruising in the East Indies, noticed that the venous blood of his patients seemed redder than that of people living in temperate climates. Doubtless other physicians had also noticed the fact. Mayer pondered over this apparently insignificant difference in venous blood, and reached the conclusion that the cause must be the lesser degree of oxidation required to keep up the body temperature in the torrid zone. And it was this conclusion which finally induced him to look upon the body as a machine. The thought led to the discovery of the mechanical theory of heat, and to the first comprehensive appreciation of the great law of the conservation of energy. Blood-letting is a time-honored practice which is now fallen out of favor. But this inquisitive and discerning physician deduced from it conclusions so marvelous that he has been called "the Galileo of the nineteenth century."

Chemists speak familiarly and learnedly now of the law of substitution, by which they are enabled to explain so many of the eccentricities of carbon compounds. The discoverer of that law was a curious Frenchman named Dumas, who was once invited to a court ball given at the Tuilleries. A strong and penetrating odor pervaded the royal ballroom. The guests coughed and sneezed. Dumas also coughed and sneezed, and wondered why. He tells us that he finally recognized the odor as that of hydrochloric acid, and found that the wax tapers by which the ballroom was illuminated had been bleached with chlorine. Experiments which this discovery subsequently induced him to make proved to him that for the hydrogen in organic compounds, other elements could be substituted, atom for atom, and that every organic compound was, therefore, a step to some other organic compound. No generalization has contributed more to the progress of organic chemistry than this law of substitution.

Such anecdotes can be told *ad infinitum*. Enough have been given to show clearly how simple things are often straws which have guided the current of scientific thought to epoch-making discoveries.—*Scientific American*.

REVIEW OF THE MARKETS.

**Wire Nails:** The demand for Wire Nails continues as favorable as previously noted, being a steady one, and while some complaint is made about inability to get specifications filled complete, still not a great deal of inconvenience is caused on this account, as buyers endeavor to anticipate all possible requirements, the market being in a favorable condition for ordering. The quotations continue as previously quoted, f. o. b. Pittsburgh, terms 60 days or 2 per cent. discount for cash in ten days:

To jobbers in carload lots.....	\$2.30
less than carload lots.....	2.35
To retailers in carload lots.....	2.40
less than carload lots.....	2.50

New York prices remain the same as previously quoted, and are as follows:

To retailers, carloads on dock.....	\$2.53
Small lots at store.....	2.60

**Cut Nails:** The business being done in Cut Nails may be considered satisfactory for the season, no special impetus being given to the demand, and quotations remain without changes, manufacturers' quotations being as follows, f. o. b. Pittsburgh, plus the actual freight to point of destination, terms 60 days or 2 per cent. discount for cash in ten days:

Carload lots.....	\$2.00
To jobbers in less than carload lots.....	2.05
To retailers in less than carload lots.....	2.20

New York prices are steady at the following quotations:

To jobbers in carload lots on dock.....	\$2.13
less than carload lots on dock.....	2.18
To retailers in less than carload lots on dock.....	2.36
Small lots from store.....	2.25

**Barb Wire:** The demand for Barb Wire is excellent, no evidence being given of any abatement at the present time. Mills are running to the fullest capacity, and shipments are ordinarily prompt, although occasionally some complaint is made of the non-fulfilment of rush orders. Quotations are as follows, f. o. b. Pittsburgh, 60 days or 2 per cent. discount for cash in ten days:

To jobbers in carload lots, Painted.....	\$2.60
Galvanized.....	2.90
less than carload lots, Painted.....	2.65
Galvanized.....	2.95
To retailers in carload lots, Painted.....	2.70
Galvanized.....	3.00
less than carload lots, Painted.....	2.80
Galvanized.....	3.10

Ellwood and Baker Wire is 5 cents and Washburn & Moen Glidden 10 cents per 100 pounds higher than the prices above named.

**Plain Wire:** There is a very heavy demand for this staple, both for manufacturing purposes and for the supply of the general market. Indications are favorable for a continuance of the same. The market continues firm at the quotations which follow, f. o. b. Pittsburgh, terms 60 days, or 2 per cent. off for cash in ten days:

	Base sizes.	
	Plain.	Galv.
To jobbers in carload lots.....	\$2.25	\$2.65
less than carload lots.....	2.30	2.70
To retailers in carload lots.....	2.35	2.75
less than carload lots.....	2.45	2.85

The above prices are for the base numbers, 6 to 9. The other numbers of Plain and Galvanized Wire take the usual advances.

**Builders' Hardware:** The Lockwood Mfg. Co., South Norwalk, Conn., represented in New York by the Allerton-Clarke Co., 97 Chambers St., have recently issued Price List No. 4, giving list prices on all goods in their 1894 catalogue and 1897 portfolio. The prices are subject to a discount to retail Hardware dealers of 50 per cent. The line of goods manufactured by this leading concern is annually increasing and is fully up-to-date in every particular.

**Carriage Bolts, Machine Bolts, etc.:** At a recent meeting of the manufacturers of this class of goods the conditions of the iron market made a slight advance necessary, and the following discounts were agreed upon. Terms, 60 days or 2 per cent. discount for cash in 10 days:

Common Carriage Bolts.....	.65 and 10	Discount.
Machine Bolts with H. P. or C. P. Plain Nuts.....	70 and 7 1/2	per cent.
Machine Bolts with C. & T. Nuts.....	.65 and 12 1/2	per cent.
Machine Bolts without Nuts.....	.70 and 17 1/2	per cent.
Machine Bolts, Blanks.....	.70 and 7 1/2	per cent.
Bolt Ends with H. P. or C. P. Plain Nuts.....	.70 and 7 1/2	per cent.
Bolt Ends with C. & T. Nuts.....	.65 and 12 1/2	per cent.
G. P. Coach Screws.....	.75 and 10	per cent.
Cone Point Lag Screws.....	.75 and 15	per cent.
Skeln. Screws.....	.75 and 10	per cent.
Forged Set Screws and Tap Bolts.....	.65	per cent.
Flow. Bolts and Guard Bolts.....	.60 and 10	per cent.
Stud Bolts.....	.70 and 10	per cent.

These are the regular trade discounts, from which the usual extra discounts are given to wholesale buyers for large specifications.

**Nuts:** In sympathy with the advance in prices on Carriage Bolts, etc., the manufacturers of Hot Pressed Nuts, at a meeting held recently, made an advance of 1-10 cent per pound, making the present quotations as follows, subject to the usual concession for large orders. Cold Punched Nuts were left without change in current prices.

	Off list.
	Cents.
Hot Pressed Nuts, Square.....	\$5.50
Hot Pressed Nuts, Hexagon.....	6.20

**Linseed Oil:** The Dean Linseed Oil Co. quote as follows:  
In lots of less than 5 barrels.....62 cents per gallon.  
In lots of 5 barrels or more.....61 cents per gallon.

The five-barrel price only applies to deliveries of that quantity at one time.

Bolled Linseed Oil, 2 cents per gallon higher than Raw.
Calcutta Oil, 85 cents per gallon.

THE PHILADELPHIA TRADE.

Prices certainly do not show any signs of weakness; on the contrary, the market is everywhere firm—advances are a daily occurrence. The American Steel and Wire Co. have issued a circular letter saying they are from three to four months behind on orders for wire and fencing. We find the same condition exists on some other lines of goods, while the supplies of Wire Cloth and Poultry Netting are now running so low that jobbers are withdrawing extreme prices and quoting higher figures, and still higher prices are likely.

The weather has been very much against trade; it has been cold and rainy; and vegetation is backward. In spite of these unfavorable circumstances, orders are coming in freely, and in good volume, while the prospects for a large trade are excellent as soon as we have some warm and seasonable weather.

The threatened coal strike has been averted and, with labor well employed, there seems to be no reason why a large volume of trade may not be expected during the Spring and early Summer.

Advances during the last few days have included Common Carriage Bolts, Machine Bolts, Coach Screws and Enameled Ware, and advances are so much the thought of the day that no one would be surprised at further developments in this line.

BIDDLE HARDWARE CO.

THE BALTIMORE TRADE.

The trade within a short radius of our city is at present most conspicuous, and demands prompt attention, as many orders now received we are expected to ship on sight and complete. It would afford us intense pleasure, had we the ability, to practically do so in all cases, but when your rush

orders to manufacturers bring responses advising that same will be placed next in rotation and that two to four weeks might elapse before shipping, then your buyer feels like going outside and expressing his troubles in a breezy manner. Business is still moving at a good pace, collections are satisfactory and continued activity is anticipated.

H. W. WEBB & SONS.

#### THE BIRMINGHAM TRADE.

Spring business is moving along in a satisfactory manner with a good volume of trade, save a tendency with some of the trade to shade manufacturers' prices, which have a firm tone with a probability of advance. We regret to see at this time a strong probability of a violent conflict between capital and labor which has been precipitated at McKeesport, and may extend to many industries, thus affecting many people even beyond those directly interested. We will watch the result with interest since this will be the first conflict with labor, and the great allied interests having no exact parallels or precedents, will make the contest all the more interesting.

There has been much talk in the newspapers about a consolidation of all the great Southern iron industries, but so far, we have not been able to trace the same to any solid foundation or to ascertain through those in the best position to know most about it that there is any near approach to such a trade. It may happen, and we are prepared to not be taken by surprise in any event.

This section continues to grow, and we have many people coming here, creating a demand for dwellings, thus helping along the trade in builders' supplies.

The impression is abroad that we have a live, active city and section, and we do not see any cause to contradict it.

MOORE & HANDLEY HARDWARE CO.

#### THE PITTSBURGH TRADE.

An excellent business is doing in the jobbing trade at present. April is usually one of our best months, and this year is keeping up to the record. There is a very heavy demand for fence wire, farmers having put off buying it last year on account of the price, find themselves doubly in need of a supply.

Jobbers are handling wire and nails on too close a margin. The differential allowed by manufacturers between the jobber's and retailer's price is quite as small as it should be, but jobber's competition has cut it in half and the goods are handled at an actual loss. There should be some harmonizer abroad, who could convince us all of the folly of such senseless competition. The same quantity would be sold, our customers would be as well satisfied, and we would have at least a new dollar for an old one, instead of paying our customers for the privilege of filling their orders.

LOGAN-GREGG HARDWARE CO.

#### THE CLEVELAND TRADE.

The action of the ore producers in making prices for 1901 on ore, indicates that the big steel combination is not nursing a boom, and it is welcome evidence that they are likely to act on conservative lines. If the increase of power was always accompanied with the feeling of increased responsibility, big combinations might prove a benefit. It is not a general impression, but it is true, that the higher you get in business, honor increases, and this is of vital importance to the students of social science.

There is great necessity for change in business methods, as the expense in many cases is excessive, and every step that reduces the cost of necessities to consumers, is in the right direction.

Trade in all lines is excellent. There is great difficulty in filling orders, as large manufacturers seem to have underestimated the quantity of goods that would be desired. This is a perennial trouble, but it is exaggerated this season.

THE LOCKWOOD-TAYLOR HARDWARE CO.

#### THE CHICAGO TRADE.

We have been literally swamped with orders for the past two weeks, and if the volume of business continues, this will unquestionably be the largest month in the history of our business. Last month was an exceptionally heavy one, but we look for April to be very much better. Advances are continuing to come in almost daily, and those already made, remain very stiff. We are already feeling a scarcity in certain lines of goods, and while we are filling our orders completely and promptly, owing to the large stock that we have on hand (having prepared for it in advance), there is no question but what the growing scarcity of a great number of items will be felt in the near future. Under the circumstances, our wisest customers, at our earnest solicitation, are placing their orders with us very freely at this time, for shipment now and in the future. These early orders will be cared for promptly, but we are afraid that when the scramble for goods begins, those who have put off ordering until the very last minute, will experience trouble and have a very hard time to get the goods they want, and when they want them.

The large increase that we are having in our business clearly proves to us that most of our trade are taking advantage of our earnest solicitation, to order goods now. Prices ruling at present are still very low, considering market values of raw material, and with the probabilities that higher rates will prevail, the trade at large are making the best of present opportunities.

WELLS & NELLEGER CO.

#### THE COLUMBUS TRADE.

Sleighting is fine except where the snow is so deep you can't see the horses. Sleds are in good demand, and at present it looks as though skates would be in demand to-morrow.

Rubber boots, mackintoshes, umbrellas and mud boots—We are wandering; we are in the Hardware business and do not sell rubber boots and such things. Seriously, however, this weather would try the patience of a hobo. Robins, blue birds, frogs (on Summit St. in Toledo) baseball fiends, fishermen, ladies with new hats and everybody are disgusted with the weather. Still, with all the bad weather drawbacks, trade is excellent. The trouble is to get goods fast enough. We have been working a good portion of our force every night for several weeks, and still customers complain that we are slow filling orders. Well, flies and mosquitos will not bother people for a few days if they don't get their screens up; and potatoes or anything else that has been planted will not need "The Man with the Hoe" for a few days. It looks as though this weather was sent to give dealers a little time to catch up. We, however, would be willing to get a mighty hustle on if it would bring "Spring, Beautiful Spring." Don't get a club. We do not intend to write Spring poetry. Collections not good. THE SMITH BROS. HARDWARE CO.

#### THE MINNEAPOLIS TRADE.

Business up to this time has been very good for the season of the year, weather conditions favorable, and building operations have commenced in earnest, and it is estimated that more work in value is under way than ever before known in the history of the city.

Real estate is commencing to move again, mills and factories full of business in all lines, and labor employed at satisfactory wages.

With all these favorable conditions comes trouble between the master builders and carpenters—only a few points of difference but sufficient to cause a lock-out. It has now extended to some degree into other trades, with a possibility of a general tie-up by May 1st, if matters are not adjusted before that time. Without attempting to discuss the merits, will say it is more than unfortunate that with conditions so favorable as mentioned, that this trouble should come on and thus interfere even temporarily, with the tide of prosperity that seemed to have struck us.

With these conditions prevailing, it is hard to say what the future may have in store for dealers who depend largely upon local trade. W. K. MORISON & Co.

#### THE ST. PAUL TRADE.

With the sun shining, frost out of the ground, seeding progressing, everything and everybody feels as though he had many things to be thankful for. Our last year crop failure made the farmer and merchant feel discouraged, but as this was the first we ever had, we have reason to think it may be the last, so we go on and sell goods to people, and hope they can pay out of the new crop of this year. With prices firm, goods scarce, the merchant should get a good profit on what he has on hand. Altogether, we can feel that the year has good things in store for all people.

C. W. HACKETT HARDWARE CO.

#### THE DAVENPORT TRADE.

Trade conditions are practically the same as reported in our last letter. The Davenport, Rock Island & Northwestern Railway on account of some traffic arrangement has discontinued running trains and the road is now operated jointly by the C. M. & St. P. and the C. B. & Q. The Q. has put on a new fast passenger train between Davenport and Chicago, their through trains between St. Paul and St. Louis cross the river here and run over the Davenport, Rock Island & Northwestern tracks as far as Clinton. It is possible that the C. M. & St. P. will soon put on faster trains between here and Chicago; they will complete their Kansas City and Chicago easy grade and short line this Summer, using the C., R. I. & P. tracks from Columbus Junction to Davenport, their fast trains crossing the river here.

The Mississippi steamers are running regularly between

Davenport and Clinton, and also from Davenport to Burlington. The St. Louis and St. Paul line are expected to commence running through boats from Saint to Saint in a few days.

President McKinley and his party will visit Davenport in June, and will inspect the great Rock Island Arsenal while here. SICKELS, PRESTON & NUTTING Co.

#### THE SAN FRANCISCO TRADE.

Business continues good all along the line, and no complaints of the condition of trade are being heard from any quarter. The people of this city and the entire Pacific Coast territory are just now in a buzz of activity incidental to the coming here next month of President McKinley, whom they are pleased to speak of, and prepare to honor, as the man who a few years ago geared things into shape and then pressed the button that sent abroad throughout the land an advance agent of prosperity who hasn't yet shown any spirit of "let up" in prosperous work.

No line of commercial activity is more in the foreground in the preparatory work going on for the President's reception here than is the Hardware line. As leaders of working committees of importance in this connection, and as contributors to the city's \$30,000 reception fund, every local Hardware jobber and retailer is creditably in evidence.

Recent visitors here were Isaac W. Morton, director of the Simmons Hardware Co., and H. N. Davis, president of the Smith & Davis Mfg. Co., both of St. Louis; Edwin C. Goshorn, manager of the National Lead Co., Cincinnati; Franklin H. Head, iron manufacturer, Chicago, and Adolphus C. Bartlett, vice-president of Hibbard, Spencer, Bartlett & Co., wholesale Hardware merchants, Chicago. Mr. Goshorn, who is also president of the Cincinnati Commercial Club, said: "San Francisco is now the gateway of one of the largest trades within the grasp of the United States, and the Orient holds great possibilities for our country."

In the long list enumerated by the Board of Trade, of San Francisco, the following two items are all that is mentioned under the head of Hardware: Mark Everson. Oakland, Cal., assets, \$929.78; liabilities, \$3,660; released from attachment in consideration of a transfer of assets; and Dallas & Spangler, Hood River, Ore., liabilities, \$233.69; settlement at 28 per cent.

INDUSTRIAL PRESS ASSOCIATION.

#### American Advertising Matter in Russia.

Consul-General Holloway, under date of St. Petersburg, March 12, 1901, reports that several American exporters, desiring to reach the trade in their respective lines in Russia, ordered catalogues and other advertising matter printed in New York in the Russian language and shipped them to Russia, to be addressed and mailed by agents in Russia; but they were refused admission because they had not complied with the Russian laws governing the censorship of the press,

THREE-BAR LEATHER  
shoe-soles and top-lifts (for heels) are the best.

Write us; we'll give you points.

Baxter Schenkelberger & Co,

350 Congress street, Boston.

which requires that everything printed in the Russian language must receive the approval of the chief of the central committee of foreign censorship before it can be admitted or circulated in Russia.

American exporters who desire to circulate advertising matter printed in the Russian language in Russia must address a petition to His Excellency Count Alexander Mouravieff, chief of the central committee of foreign censorship, describing the character of the publication and its purpose, to which must be attached two copies of the publication for which admission is desired, praying for permission to admit and circulate the same in Russia. To this petition must be attached two Russian revenue stamps of the value of 1.60 rubles (84 cents), preferably two of 80 kopecks (42 cents) each. This petition will be more likely to receive immediate attention if written in the Russian or French language, though the same would be translated and forwarded if sent direct to the United States ambassador or consul-general at St. Petersburg, if accompanied by the amount necessary to purchase the revenue stamps.

Incendiary matter has been circulated in every form in Russia; hence the authorities censor everything that is printed as rigidly as they did a century ago.

"I was reading," said the man in the barber's chair, "of a man who claims he has skinned no less than three thousand coons in the course of his life."

"Lawd!" exclaimed the superintendent of the shoe-polishing department, "what a crap-shooter he must o' been!"—*Indianapolis Press.*

#### Telephone Train Dispatching.

The Northern Pacific Railroad, according to the *Electrical Review*, is the first of the Western railroads to adopt the telephone in place of the telegraph for train dispatching. The plan is to place each station on a division in direct communication with division headquarters, and the several division headquarters by long-distance lines with the general offices. This will enable a large amount of business to be quickly transacted over the 'phone that is now done by mails and telegraphs, which it is expected will facilitate greater dispatch.

"Halloa! Halloa! Is this the gas company's office?"

"Yes; what is it?"

"When do the entries for the next race open?"

"We don't know anything about the races; this is the gas office."

"Correct; but I thought you could tell me."

"Why; what do you want to know for?"

"Oh, nothing particular. I have a gas-meter so fast I would like to enter, that's all."—*Tit-Bits.*

The beautiful girl shivered when I told her that I had never truly loved her.

"But your billings and cooings!" she protested. "Did they mean nothing?"

"Oh, bless you, those were only josh billings!" quoth I, brainily.

I laughed with unfeeling violence, but for all that I could see that I had broken her once happy heart.—*Detroit Journal.*

## Improved Carpenters' Tools.

SOLD BY ALL HARDWARE DEALERS.

### Death of Enos E. Stow.

Enos E. Stow, former president of the Peck, Stow & Wilcox Co., Southington, Conn., died suddenly of heart failure at his home in Southington, April 10th. He was born in Southington, March 18, 1824. He commenced the manufacture of tinners' machines with his father and other associates in 1847. In 1849 the elder son, Orson W. Stow, became a member of the firm, which then became S. Stow & Sons, a general stock company being formed in 1852, known as the S. Stow Mfg. Co. The S. Stow Mfg. Co. in 1870 was consolidated with the Roys & Wilcox Co. and the Peck, Smith Mfg. Co. into the corporation since known as the Peck, Stow & Wilcox Co., with headquarters in Southington, Roswell A. Neal being first president, and successfully acting in that capacity until January, 1887. At the retirement of Mr. Neal, Mr. Stow became president, and so continued until July, 1899, when he was succeeded by the present incumbent, A. R. Treadway, of Cleveland. Mr. Stow was a representative New Englander, commencing with very moderate facilities, and reaching the high position of president of a large manufacturing company, whose capital stock and surplus at the time he was chosen to fill that position aggregated nearly \$2,000,000. He was also president of the

Southington Water Co., a director of the Southington National Bank and of the Aetna Nut Co. Mr. Stow was a prominent member of, and for many years, a deacon in the Plantsville Congregational Church. He was a thorough business man, of a genial and attractive disposition, of the strictest integrity in all his walks in life. By no means partial to an active public life, he still took a warm interest in everything pertaining to the civil and moral advancement of his native town. He was a practical reformer, and in everything tending toward moral advancement he could be relied upon to give every assistance, and endorse the same by any contribution necessary to its successful achievement. He leaves a widow, two daughters and one son. The latter, Frederic E. Stow, is superintendent of the company's edge tool factory.

Hetty (recently engaged)—Oh, mother, you ought not to ask me to make the bread now, the dough gets into the setting of my diamond ring awfully.

Mother—Then why not take the ring off when you begin to make the bread?

Hetty—Mercy! Suppose somebody should come in!—*Boston Transcript.*

## THE O K LAWN TRIMMER.

SIMPLE, DURABLE, EASY TO OPERATE.

The O K Lawn Trimmer is the only practical implement of its kind, and is needed by every one who has a Lawn or Stone and Cement Walks. It cuts out a V shaped strip of sod along the walks which can be taken up like a piece of rope, leaving no dirt, as it cuts the sod without tearing it. A lawn requiring several hours hard work by the old method can be trimmed with the O K Lawn Trimmer in a few minutes. The blade, or cutting part, is stamped out of steel, and the handle is of hard wood, making a nice appearing as well as an indestructible implement.

## HARDWARE DEALERS' RECORD.

Hardware dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

### Incorporations, New Stores, etc.

Aiken, S. C.—The Powell Hardware Co. has been chartered, with Robert Powell, president, and others.

Bridgeton, Ind.—P. Smith.

Cohocton, N. Y.—The Cohocton Hardware Co., composed of some of the most substantial business men of that village, have opened a hardware store in the building recently occupied by M. Kimmel & Son, who moved to Wayland.

Davenport, Ia.—A new hardware firm is going into business at 1509 Harrison street. It will be known as Brown & Wright, the former hailing from Le Claire, and the latter being a well-known Davenport.

Deer Lodge, Mont.—The O'Neill Hardware and Plumbing Co. has been incorporated by J. E. O'Neill, B. O'Neill and E. Scharnikow, with head office at Deer Lodge. The capital stock is \$20,000.

Gardner, Mass.—A Rosenberg.

Fond du Lac, Wis.—Articles of incorporation of the Wilkie Hardware Co., capitalized at \$10,000, have been filed at the registrar of deeds office. Oscar J. Kraemer is one of the incorporators, the others being W. Wilkie, J. A. Wilkie, Elizabeth Wilkie and Matie Wilkie.

Fort Worth, Tex.—Mickle-Burgher Hardware Company; capital stock, \$50,000; incorporated by J. J. Mickle and Joe T. Burgher, of Fort Worth, and W. W. Clower, of Quanah, Tex.

La Junta, Col.—La Junta Hardware Co.; capital, \$8,000. Directors, F. A. Brown, A. B. Corbin, Anna E. Corbin.

Livingston, Mont.—Articles of incorporation of the A. W. Miles Co. have been filed by Arthur W. Miles, J. Herman Wolcott and Edward M. Sybert. The company will engage in the manufacture and sale of tinware, stoves and all kinds of hardware. The company is capitalized at \$100,000.

Lyons, N. Y.—Bert Marshall.

Neosho, Mo.—Briggs-Centers Hardware Co.; capital stock, \$30,000; incorporated by J. H. Centers, H. D. Dean.

Port Jervis, N. Y.—W. L. Betts, 25 Front street.

Salem, N. Y.—O. E. Lamb, Philo block.

Saranac Lake, N. Y.—Adirondack Hardware Co.; capital, \$50,000. Directors, M. J. Callahan, of Keeseville; O. L. Starks and J. G. Forest, of Saranac Lake.

The Carborundum Co., capitalized at \$300,000, has decided to increase its capital stock to \$600,000 and to build a brick addition of three stories to its kiln room.

Van Alstyne, Tex.—The Jackson Hardware and Implement Co., capital stock, \$12,000.

### Changes and Improvements.

Albuquerque, N. M.—The Whitney-Goff Hardware Company, composed of W. R. Whitney, president; Clarence D. Goff, vice president, and H. P. Raabe, secretary and treasurer, has been organized, and they have purchased the Donahoe Hardware Company.

Chester, Pa.—Albert Smith, who formerly conducted the hardware store at 1810 West Third street, will again move back to the old stand from the Tenth Ward, where he has been for some time.

Du Bois, Pa.—Negotiations have been concluded whereby the hardware firm of Hibner & Hoover becomes the purchaser of the stock of the Du Bois Hardware Company and also the building occupied by the same. This is one of the largest transfers of mercantile interests that has ever occurred in town, approximating \$45,000.

Fond du Lac, Wis.—The firm of W. Wilkie & Son, hardware dealers, has been succeeded by the Wilkie Hardware Co., Mr. Oscar J. Kremer, who has been in the hardware business for twelve years, being admitted to membership.

Hackettstown, N. J.—A. J. Ayers has associated himself with W. A. Hoffman in the hardware business.

Huntington, Ind.—J. L. Smith, the hardware merchant, is enlarging his storage room on Frederick street so as to accommodate the tin shop which is being moved from the second floor of his main building. Part of the roof is also being raised to form an iron room. The changes are found necessary on account of Mr. Smith's adding heavily to his stock of goods.

Hyde Park, Mass.—E. S. Hill has moved his hardware business from Forest Hills to the Kennedy store on Fairmount avenue.

Lexington, N. C.—The Lexington Hardware Company have decided to enlarge their store by the erection of a large buggy house in the rear of their present store building. Work will be commenced at once.

Milwaukee, Wis.—The Phillip Gross Hardware Company will occupy a large brick addition, which is to be built on the property of Dr. William Jacobs, 126 Grand avenue. The addition, which will be built one story high, will cost \$10,000.

Mt. Airy, Md.—Andrew Baker is building a new hardware store opposite Albert Jones' bank.

Ottawa, Ont.—J. G. Cowan, of Grant Bros., E. E. Wiltzie, Brockville, and W. J. Mather, Vancouver, have bought Henry Living's hardware business, corner Bank and Albert streets.

Palmer, Mass.—Cecil I. Whitcomb, for a number of years with E. A. Buck & Co., has been admitted as a partner in the retail hardware business, and the firm is now Buck & Whitcomb.

Sidney, N. Y.—J. E. Davis has recently purchased the hardware business of Penlebury Bros.

Sioux Falls, S. D.—A business change of some importance was made by the purchase by G. S. Maxwell, Pipestone, Minn., of an interest in the Mullen Hardware Company, of this city, to which he will give his personal attention.

Sykesville, Pa.—Our enterprising hardware merchants, Shaffer & Rupert, have begun breaking ground for a large store room on the corner of Main and Soldier streets. The structure will be brick, and will be occupied by them. Their present rooms are not large enough for their increasing trade.

Williamsport, Pa.—The old-established hardware house of F. H. Keller & Co. will hereafter be known under the firm name of A. W. Lieb & Co., Mr. Lieb having purchased the interest of the late F. H. Keller. Mr. Lieb has been a partner of F. H. Keller & Co. since its formation, in the early '80s.

### Business Embarrassments.

Boston, Mass.—C. E. Chamberlain Co., dealers in hardware, have made an assignment.

Canton, La.—A. P. Orrick, hardware merchant, has made a general assignment. Liabilities, \$6,000; assets, the same.

Columbus, O.—E. D. Hoffman, a hardware dealer at 43 West Broad street, has filed a petition in bankruptcy in the United States Court. The liabilities are given as \$2,240.41, and the assets at \$2,139.03, of which \$1,450 consists of stock in trade.

Memphis, Tenn.—A partnership petition in bankruptcy has been filed in the office of District Clerk Weisinger by Rodgers Bros. & Co., engaged in the hardware business.

Milwaukee, Wis.—William J. Voss, a hardware dealer at 386 Grove street, has gone into bankruptcy, Judge Seaman having appointed Walter J. Luebke as receiver, with bond of \$5,000. The petition filed shows debts of \$12,492.41 and assets of \$8,497.13. Voss claims exemptions of \$509.50. The stock is said to be worth \$5,000.

Wahpeton, N. Dak.—In the bankruptcy court Howry & Allen, hardware merchants of Wahpeton, have been adjudged bankrupts. The members of the firm were Heber H. Howry and Albert D. Allen.

### Fires in Hardware Stores.

Antioch, Ill.—P. P. Ames. Total loss. Bedford, Pa.—Blymyer Hardware Co. Loss, \$10,000.

Bellaire, Mich.—Antrim Hardware Co. Loss, \$8,000; insurance, \$6,500.

Clare, Mich.—A. J. Doherty. Loss \$10,000.

Danville, Ind.—Leachman & Seller. Loss, \$7,000; insurance, \$4,000.

Edon, Ohio—G. M. Swaney & Co.

Lehigh, Ia.—Ross' Hardware store. Loss \$3,000.

Providence, R. I.—Union Hardware Co. Loss, \$60,000; no insurance.

Rutherford, N. J.—L. M. Ball & Co. Insured.

Swayzee, Ind.—J. E. Galbraith.

The "Miller" is a radical departure from the conventional style of step ladder. It has an individuality entirely its own which has won for it recognition as the standard ladder in the decorating trades.

## HARDWARE MANUFACTURERS' RECORD.

Hardware manufacturers over the country, are requested to contribute to this page. News of new factories or companies, changes, improvements, etc., will be gladly received, and promptly published.

### New Incorporations, Etc.

Brooklyn, N. Y.—Wilson Bohannon has been incorporated to manufacture locks, bolts and fastenings; capital, \$40,000. Directors: W. T. Bohannon and E. L. Gwathmey, Brooklyn; Jennie A. Farrar, Kinderhook.

Cincinnati, O.—The Handy Window Shade Adjuster Co. has been incorporated with a capital stock of \$10,000 by A. H. Hoover, John Grimm, Jr., John Galvin, Edward Griume and Maurice L. Galvin.

Chelsea, Mich.—The articles of association of the Glazier Stove Co. have been filed with County Clerk Blum. The capital stock of the corporation is \$300,000. The names of the stockholders are as follows: Frank P. Glazier, Chelsea; Casper E. DePuy, Stockbridge; Mrs. Emily P. Glazier, Mrs. Almira A. Hill, C. LeRay Hill, Egbert G. Hoag, W. J. Knapp, Fred Wedemeyer, all of Chelsea; William W. Wedemeyer, Ann Arbor; Safe C. Stimson, William P. Schenk, Henry I. Stimson, all of Chelsea.

Dover, Del.—The Glen Iron Furnace Company has been incorporated to purchase and otherwise acquire and control the establishment and business known as the Berlin Iron Works. It is a Philadelphia concern and has a capital stock of \$100,000.

Findlay, O.—Pittsburg capital has just become interested in a new venture at Findlay, O. The tube plant of the Heckert-Baltzley Billet Co. has been leased by a company in which Pittsburgers form a prominent part. The members of the company are Edward E. Erickson, an engineer and contractor, and Charles T. Torsell, a steel expert, of Pittsburg; P. T. Courtney, a mechanical engineer, of New Castle, and Col. Newton Adams, a banker, of Findlay. The company will soon be incorporated. The capital is to be \$100,000. The name for the concern has not yet been selected.

Fort Wayne, Ind.—The Fort Wayne Iron Stove Co. has been incorporated. Capital stock, \$15,000. Directors: William E. Mossman, Edward F. Yarnelle, B. Paul Mossman, Henry J. Miller, William A. Diffenderfer and Bernard H. Schele.

Franklin, Pa.—It is expected that the Grant Tool Works will be in operation by June 1. J. J. Grant, president of the company, is now in the East buying new machinery.

Providence, R. I.—Articles of incorporation have been filed with the secretary of state by the American Window Appliance Company. The incorporators are James H. Wallace, Arthur G. Hilton and Leonard B. Wallace, and the capital stock is \$100,000. The company is authorized to buy, sell and trade in all appliances for doors and windows; buy and sell letters patent for

both the United States and foreign countries for improvements on appliances for doors and windows, and to manufacture articles of steel, iron and other metals.

Toronto, Ont.—William A. Rogers (Limited), has been incorporated, capital, \$1,350,000; manufacturers of and dealers in cutlery, silver-plated ware, etc.; James S. Lovell, William Bain and Robert Gowans, Toronto, provisional directors.

Toronto.—Incorporation has been granted by the Ontario government to the Imperial Corundum Co., with an authorized capital of \$1,000,000; head office in Toronto and the following named directors: L. A. Morrison, James Curry, Toronto; Rev. P. S. Merrill, Buffalo; G. A. Sanborn, Kenmore, N. Y., and Aug. J. Hathaway, North Tonawanda, N. Y.

Walden, N. Y.—New York Knife and Razor Co. has been incorporated. Capital, \$1,000,000, and directors: George Ethridge, J. J. Adams and George J. Vestner, of New York City; J. E. Fuller, of Orange, N. J., and T. D. Adams, of New Rochelle.

Woodbury, Conn.—Frederick Suckley, of this place, and Carl Wolf, of Bridgeport, have hired a part of Ford's old shop in the north part of Woodbury and, under the firm name of Wolf & Suckley, are going into the business of manufacturing shears and razors, and manufacture a solid steel shear, rather than one of iron and steel. They also have an invention on shears which they expect to use later on.

### Changes and Improvements.

Beaver Falls, Pa.—The American Axe and Tool Company have made arrangements for increasing the capacity of their plant in this place about 25 per cent., by securing an additional drop hammer for forging axe heads. The new hammer is of the most improved pattern, and it will make the fifth hammer in use for that purpose in the plant.

Detroit, Mich.—A three-story frame building, 90x75 feet, is being added to the Art Stove Co.'s plant, corner of Milwaukee avenue and Russell street. It is so constructed as to retain the yard space and will be used in part for storage purposes.

Meriden, Conn.—Kane & Son have begun work on Miller Bros.' cutlery factory, the new addition that is to replace the building damaged by fire not long ago. The work will be hurried along, as this firm is anxious

Newark, N. J.—The Heller Tool Company will shortly enlarge its machine shop. An extension of sixty feet and two stories high will be built. Some changes will also be made in the location of the office.

Niagara Falls, N. Y.—It is announced that the Norton Emery Wheel Co., of Worcester, Mass., will build a large factory here this spring. A contract has been signed with the Niagara Falls Power Co. for 1,000 electric horsepower.

Northampton, Mass.—A deal has been consummated whereby the E. E. Wood

Cutlery works, of this city, passed into the hands of the William A. Rogers Co., Ltd., of New York. The Rogers Co. now owns the Niagara Falls Silver Plating Co., the Pairpoint works, at New Bedford, and the Rogers & Wood silver plating works. The plant acquired here, it is said, cost them more than \$100,000.

Norwich, Conn.—The Hopkins & Allen Arms Co. has increased its capital from \$100,000 to \$200,000.

Pittsburg, Pa.—The new Pittsburg Shovel Co. is arranging to start operations at the leased plant of the American Sheet Steel Co., at Leechburg, on July 1. Modern equipment is being ordered and the plant will produce about 200 dozen steel shovels daily. The company's capital is \$100,000 and it is officered as follows: W. S. Horner, president; G. S. Phillips, vice president; W. L. Lester, secretary, and L. V. Walsh, treasurer.

Stamford, Conn.—The Yale & Towne Mfg. Co. has plans prepared for the erection of several large brick buildings, as an addition to its already great plant at Stamford, and the Branford branch of the company will be moved to Stamford not later than January 1 next. When the additions have been made, Stamford will have the largest lock factory in the world.

Worcester, Mass.—The Union Hammock Co., located at the corner of Foster and Union streets, has changed its name to that of the Star Hammock Co., as it was found the original name conflicted with that of another company operating in New England. The company has not fairly started as yet, and but one loom is in operation getting out samples. The company includes Charles F. Marston, Charles E. Shepard and E. E. Howard.

### Recent Embarrassments.

Toledo, O.—George S. Schutt, doing business as the Barnard Manufacturing Co., at 123 and 125 Summit street, has assigned to George A. Bassett. The business is a washing machine concern. Bond is given for \$1,000. The assets are \$500. No liabilities are given.

### Recent Fires.

Cadillac, Mich.—Mitchell Bros' handle factory has been burned, entailing a loss estimated at \$65,000; with insurance of \$40,000. It employed 150 persons.

Chattanooga, Tenn.—The plant of the Mountain City stove works, located at East Chattanooga, has been burned this morning, with total loss aggregating \$50,000. The building was a large two-story brick, which is a total wreck. The greatest loss is in pattern and moulding rooms, both of which were destroyed, together with all the patterns. The insurance is \$35,000.

Philadelphia, Pa.—Fire from an unknown origin last night damaged the Stove Fixture Manufacturing Co.'s buildings, at No. 916 Girard avenue, to the extent of \$5,000.

### Recent Fires.

Cleveland, O.—Gormully & Jeffery, 284 Erie street. Loss, \$30,000.

Scranton, Pa.—John Rawling, 216 Pennsylvania avenue. Loss, \$2,000; partly insured.

### BICYCLES IN THE NETHERLANDS.

Only such American machines as the Cleveland, Rambler, Columbia, etc., are regularly sold. People have no confidence in machines that sell at less than \$40 here.

The trouble with all American bicycles is said to be that (1) the factories are too far away, while American sundries are different from European sundries, the consequence being that dealers have to keep in stock a great number of the former, or their customers must wait until the pieces come from the United States, which often takes six weeks or longer; (2) freights are always very high for small sundries, but this will now be improved by the parcelspost; (3) most American machines are delivered with single-tube tires,

which are not popular here, so that the merchants have to buy double-tube tires at prices ranging from \$8 to \$12, while the manufacturer makes a reduction of only \$5 for the single tubes; (4) American manufacturers prefer sight draft against bill of lading, while European manufacturers give credits of from three to six months, the result being that during last season, more German bicycles were sold here than cheaper American grades.

Chainless machines, as well as bicycles with free wheel, are not popular here.

Bicycles are dutiable at 5 per cent.

FRANK D. HILL, Consul.

AMSTERDAM, March 15, 1901.

### Columbian 1000-Shot Air Rifle.

Patented  
Oct.  
24, 1893.

CHAMPION  
MODEL.

This Air Rifle possesses advantages over all the Air Rifles now  
on the market. The materials used in its construction are  
the best. The appearance and workmanship is far ahead of  
any other Air Rifle made. It has an adjustable sight it shoots stronger  
and more accurate, less liable than any other to get out of order, all  
parts are interchangeable. We think we have the right to claim this as  
the "Champion" of all Air Rifles. List, per doz., Enameled, \$30.00; Full Nickel, \$42.00.

**PLUMBER, STEAM AND GAS FITTER.**—Plumber, steam and gas fitter desires work in city or country; first class in all its branches, estimating, etc. Neat mechanic; sober, honest; references. Twenty years' experience. Address JAMES E. USHER, 475 E. 115th Street, New York. 184

**SHIPPING CLERK.**—Assistant shipping and stock clerk desires position. Salary \$7 per week. Two years' experience with New York Hardware manufacturer. Honest and reliable. Age 20. Address TOWNE, care HARDWARE, 275 Broadway, New York. 185

**SHIPPING CLERK.**—Young man desires position as shipping and receiving clerk. Four years' experience in shipping general Hardware and machinery. Can furnish A1 references. Address W. E. B., care HARDWARE, 275 Broadway, New York. 192

**STORE MANAGER.**—First-class A1 man, good address, up-to-date ideas, understands cutlery, capable of selling goods at a profit and making money, desires an inside position where his abilities will be of value. Address GOOD INVESTMENT, care HARDWARE, 275 Broadway, New York. 198

**TRAVELING SALESMAN.**—Experienced salesman, who has sold in Virginia, Maryland, and Washington, D. C., over 18 years, is open for a good line on commission. Address BUCHTA, 1427 East Monument Street, Baltimore, Md. 164

**TRAVELING SALESMAN.**—A young man, hustler, sober and reliable, would like to represent some manufacturer or well known jobber of cutlery in the States of North and South Carolina and Georgia. Salary no object. Very best of references. Address ROBERT, P. O. Box 262, Raleigh, N. C. 206

## Side Line Offered.

**GOOD CHANCE** for Hardware salesman to sell the "Argand" Lamp as a side line; liberal commissions. Address ARGAND VAPOR LAMP Co., Detroit, Mich. 152

**HARDWARE SALESMEN.**—Salesmen traveling through Eastern territory, visiting the Hardware trade to carry as a side line Clark's Gem Flue Stops. The samples are very small and the stops are the best on the market. Good commissions will be paid. Address J. L. CLARK MFG. Co., Rockford, Ill. 207

**HARDWARE SALESMEN.**—Traveling salesmen who visit the retail Hardware trade in Pennsylvania, Ohio, Indiana, Illinois and Missouri, to carry as a side line on commission a staple household article. Salesmen preferred who cover but one State. Address A1, care HARDWARE, 275 Broadway, New York. 213

## Side Line Offered.

**HARDWARE SALESMEN.**—To handle as a side line our labor-saving device, advertised elsewhere in this issue of HARDWARE. Liberal commission to good men. We furnish free to our agents a perfect working model, pocket size, which will lift 500 pounds. Address, DEPT. C, BURR MFG. Co., Cleveland, Ohio. a

**HARDWARE SALESMEN.**—Good chance for hustling Hardware salesmen to sell our lamps on commission. PEORIA VAPOR LIGHT Co., 413 Washington St., Peoria, Ill. 171

**LIVE HARDWARE SALESMEN** wanted to handle our line of "Simplicity" Incandescent Gasoline Lamps. Easy to sell. Carry a burner in your pocket. Liberal commissions. H. MERKEL, Broadway and Elm Street, St. Louis, Mo.

**TRAVELING SALESMEN** calling on Hardware trade, wanting a first-class novelty to sell as a side line, should write us at once. An easy seller, weight 14 ounces. Sample can be carried in pocket. Address NEWTON MFG. Co., Erie, Pa. 182

**TRAVELING SALESMEN** visiting Hardware, Implement and General Store trade in the States east of Illinois, to handle on good and prompt commission a splendid profitable side line. Sales by photograph; two photos cover the line. Many salesmen in Western States are making a good profit by it. Address H. F. BRAMMER MFG. Co., Davenport, Iowa. 145

**TRAVELING SALESMEN.**—Traveling Hardware salesmen to sell as a side line our Rapid Air Rifle and Vest Pocket Hardware Specialties. Address RAPID RIFLE Co., Ltd., Grand Rapids, Mich. 180

**TRAVELING SALESMEN** to sell, as a side line, on commission the American Corn and Fodder Shock Compressor. A good seller. Address J. B. HUGHES, Greensburg, Ind. 174

**TRAVELING SALESMEN**, to sell emery and corundum wheels, as a side line, on commission. Address 79 Langley Avenue, Detroit, Mich. 83

## Side Line Wanted.

**TRAVELING SALESMAN.**—An experienced traveling salesman covering Ohio, Michigan and Indiana for past ten years, with established trade, jobbing and large retail, would like to add another good line to the two already carried. Address WORKER, care HARDWARE, 275 Broadway, New York. 204

## For Rent.

**NEW YORK CITY OFFICE TO LET.**—Broadway Chambers, 277 Broadway, tenth floor. Single room, 14 x 31 feet. Fine light. \$750. Apply Room 1003. 209

## For Sale.

**A STOCK OF HARDWARE.** Will average about \$5,000. Building, 30 x 70, 3 floors, brick, for \$5,000. In a live Virginia town. Full particulars given on application. Address J. K. PENDLETON, Clifton Forge, Va. 85

**AN UNUSUAL OPPORTUNITY.**—Wholesale, retail stock of Hardware, good will business, located enterprising city, New York State. \$12,000 to \$14,000 consisting Builders' Hardware, Paints, Oils, Glass, Stoves, Ranges, Furnaces. Will be sold at bargain if bought immediately to close out partnership. Address G. M. S., care HARDWARE, 275 Broadway, New York. 172

**HARDWARE BUSINESS.**—On account of other business I offer my dwelling, storeroom and stock, with established retail trade; the only hardware store in the town; the other one was destroyed by fire recently; good chance for a hustler. Write at once for further particulars, Box 58, Center Hall, Pa. 205

## Agency Offered.

**LIVE HARDWAREMEN.**—We would like to hear immediately from a few live Hardwaremen who would like to be sole representatives in their towns, of a concern that is in the market for business, and have a line made for "men now on earth"—a modern line THAT CAN BE SOLD to your customers. Address "BOX 88," care HARDWARE, 275 Broadway, New York. a

## Agency Wanted.

**ENGLAND**—A responsible and energetic manufacturers' agent, resident in England, seeks agency for American goods. Address JOHN THORPE, 156 Fifth Avenue, New York. 210

**SOUTH AMERICA.**—I am going into the River Plata territory, Buenos Ayres, Rosario and northward in May of this year, and would be glad to correspond with manufacturers who have goods that they want shown in that territory. Address HARRY MCNEAL, Alvordton, Ohio. 203

## Agents Wanted.

**TO SELL THE "NULITE,"** our incandescent vapor lamp. Sells almost on sight. An excellent opportunity for the live Hardware dealer, or anyone else who wants to make money. Ask for catalogue and terms. Address CHICAGO SOLAR LIGHT Co., Garden City Block, Chicago, Ill. 116

# PRICES CURRENT.

The prices noted in this Prices Current are intended for the Hardware trade only, and for such quantities as are usually purchased by retail dealers. They are carefully revised and represent quotations at which purchases can be made. Very small quantities, and broken packages, frequently make higher prices necessary.

Subscribers are requested to notify us of any discrepancies, as we desire to make this department of our paper worthy of their constant attention.

The list prices, from which discounts are given, will always be furnished the dealer upon request, by the manufacturer quoted.

## PAINT THAT LASTS

Cheap paints are expensive  
because they do not last.

### American Seal Ready-Mixed Paints

are the best because they last the longest, look the best and give entire satisfaction. The test of time proves this. They are made of the purest linseed oil white lead, zinc and color. An honest painter prefers American Seal Ready-Mixed Paints because he knows it's to *his* interests to do a good job. It is to *your* interests to see that he does use them. They are made to last whether used for house, floor, carriage, enamel, interior or roof. They are always ready for use.

Manufactured by **WM. CONNORS PAINT MFG. CO.,**  
**TROY, N. Y.**

**ONLY \$12.75. SEND NO MONEY**

If you live within 500 miles of Chicago, (if further send \$1.00), cut out and return this ad., mention No. 471, and we will send you this **HANDSOME ROLL TOP DESK** by freight, C. O. D., subject to examination. You can examine it at your nearest railroad station, and if found perfectly satisfactory and exactly as represented, the greatest value you ever saw or heard of, the equal of desks that others sell at almost double the price, then pay the railroad agent **OUR SPECIAL OFFER, \$12.75** and freight charges. The desk weighs about 180 pounds, and the freight for each 100 miles will be about 50 cents; 500 miles, about \$1.50. **THIS DESK** is 4 ft. 2 in. long, 2 ft. 6 in. wide, 3 ft. 8 in. high. Made of carefully selected oak, beautifully finished in antique, full finished back, extension slides, quarter sawed sycamore pigeonhole case, combination lock on drawers, spring lock with duplicate keys on curtain, 3 drawers on left side, lower partition for books, book closet on right hand side, drawers, pencil rests and card racks in interior, desk hand polished, dust proof curtains. **THESE DESKS** are made for us under contract by one of the largest and best desk makers in this country. Every desk is put out under the manufacturer's **BINDING GUARANTEE**, and our special \$12.75 price barely covers the cost of material and labor, with but our one small percentage of profit added. **ALFRED FIELD & CO.,**

93 Chambers Street, New York.

**WHY IS THE**

**O. K. THE BEST ROTARY  
WASHING MACHINE?**

**BECAUSE**

- 1.—It is the only Rotary washer that has Revolving Steel Ball Gearing, reducing the friction and thus making machine so light running and almost noiseless.
- 2.—The tub is made of Louisiana Red Cypress Lumber, cherry finish; the legs are solid with tub (not removable, breakable legs fastened with screws).
- 3.—The wheel turns right or left, pin wheel or dasher revolves automatically, turning the clothes back and forth through the hot soap-suds, and cleaning them without rubbing them to pieces.
- 4.—This washer is made by experienced machanicans, and will out-last any other washer on the market.
- 5.—The tub has a wringer box fastened with steel brackets.
- 6.—The lid on tub closes tight, no escape of steam.

# HARDWARE

At a meeting of the Board of Governors of the Hardware Club of New York, held April 15th, the following gentlemen were unanimously elected to membership in the Club:

Frank R. Blauvelt, 66 Reade Street.  
Alfred C. Greening, 66 Reade Street.  
J. H. Schneider, 286 Washington Street.  
Louis F. Dodd, 52 Broadway.  
Henry Esberg, 47 Murray Street.  
Frank M. Avery, Tribune Building.  
G. A. Tatum, 48 Barclay Street.

Allan J. Gray, financial manager of the firm of Allerton-Clarke Co., New York, leaves for Europe on Saturday, May 11th, by steamship *Etruria*. He proposes combining business with pleasure, and while in London, will arrange for the establishment of a branch office there.

The address of Charles X. Cordier, in whose interest a paragraph appeared on this page in our preceding issue, has been changed to Room 716, Lord's Court, corner William Street and Exchange Place, New York.

The Sixth Annual Convention of the National Association of Manufacturers will be held in Detroit, Mich., June 4, 5 and 6. At the call of George H. Barbour, of Detroit, vice-president of the Association, a large meeting of leading Detroit Manufacturers was held at the Russell House on April 9th to arrange the preliminaries for the convention, at which the various committees were appointed and other steps taken to insure the perfect success of so notable a gathering.

In our recent issue, on the page devoted to the "Hardware Dealers' Record," we noted the fact that the Union Hardware and Electric Supply Co., of Providence, R. I., had suffered a loss by fire amounting to \$60,000, and stated, which was not a fact, that they had no insurance. We are assured that they were fully covered by insurance; consequently, we change with pleasure our previous statement.

H. F. Donaldson, who for four years past has been associated as editor of "*Marine Engineering*," New York, we notice withdrew on March 30th from the publication, transferring his entire interest in the firm of Aldrich & Donaldson to his partner, H. L. Aldrich, who is now sole proprietor. Under the new management, there will be no change in the policy of the publication on account of the retirement of Mr. Donaldson. The field of technical journalism, so ably filled by this progressive paper, is so well known and understood that there is no doubt of a continuance of the cordial relations which have ever existed between the paper and its many friends.

The Bronson-Walton Co., Cleveland, Ohio, who were compelled a short time ago, owing to their increasing business, to move into their present quarters on East Madison Avenue, are again arranging to largely increase their output. They have purchased 2½ acres of ground on the tracks of the Lake Shore Railroad, in Collinwood, a suburb of Cleveland, and are erecting thereon a two-story brick building 128x62 feet, which they expect to occupy August 1st.

The Pencoyd (Pa.) plant of the American Bridge Co. shipped during March 7,339 tons. We believe this is the largest shipment ever made by any bridge shop in the world, and indicates in a manner of the most impressive kind our National pre-eminence in this industry.

The annual meeting of the stockholders of the Joseph Dixon Crucible Co. was held at the company's main office, Jersey City, N. J., Monday, April 15, and out of a possible vote of 7,345 shares, there were 7,285 shares voted for the re-election of the old Board, consisting of Edward F. C. Young, John A. Walker, Daniel T. Hoag, Richard Butler, William Murray, Edward L. Young and Joseph T. Bedle. President E. F. C. Young, Vice-President and Treasurer John A. Walker, and Secretary George E. Long were re-elected by the Directors. Judge Joseph E. Bedle was also re-elected as Counsel.

Owing to the determination of the United States Steel Co. to concentrate all operating departments of the constituent plants at Pittsburgh, Charles M. Jarvis, Vice-President in charge of the Operating Department of the American Bridge Co., has resigned, as Mr. Jarvis does not care to change his residence from New England.

The monthly meeting of the New England Hardware Dealers' Association was held at the United States Hotel, Boston, on Wednesday evening, May 8th, being preceded by the usual banquet. A report was made by J. B. Hunter, chairman of a committee of five, appointed April 11th, to formulate some plan to adjust the differences between the manufacturers and the retail dealers.

Flint, Eddy & American Trading Co., exporters and importers, who have occupied offices in the Johnston Building, 30 Broad Street, New York, have removed to the more commodious Broad-Exchange Building opposite, which is undergoing the last stages of being completed. In their new location they confine their offices to half of the eighteenth and all of the nineteenth floors. Their old location was less convenient, as their offices were distributed over five floors. As the company have a separate warehouse on Broad Street for receiving, packing and storing merchandise, the new arrangement gives them 28,000 square feet of floor space for office and other clerical purposes, making it a very important and convenient change which will no doubt be found to assist in the expeditious advancement of their large business.

Smith & Egge Mfg. Co., Bridgeport, Conn., have recently completed their twenty-seventh year in business, and to commemorate the same have deemed it desirable to equip their factory building with such modern additions and appliances as would result in making it one of the most economical plants in New England. They have doubled their power capacity by placing in their works a new engine and boiler which is after a patented system of Louis Bernhard, of Bridgeport, Conn., in the using of which all possibility of the walls cracking and the wasting of heat is done away with. This is provided in addition with a Fowler boiler protector, which is an apparatus arranged to receive the water from the heater, the gases being entirely extracted, so that the water enters the boiler at a high temperature, and with the gases extracted both corrosion and scale are prevented. This is an important feature that deserves to be made prominent among steam users. This old-established company has grown to its present proportions under a prudent management and on conservative lines. Their business has been annually extended beyond the promise of the previous year, and is well known to be large and extensive, not only among domestic trade, but also among the leading houses abroad.

## Editorial Trade Review.

The general trade connected with our widely extended industry is enjoying in almost every part of the country a condition of prosperity worthy of being perpetuated. Succeeding the rainy spell which extended all over the country, favorable weather has followed for the agricultural pursuits which form so large a part of our prosperous outlook, and everything visible promises a continuance of the gratifying conditions which promote undeviating industrial prosperity.

The prevailing scarcity existing in stocks of leading staples for this season of the year has had one good effect; less cutting of prices is noticeable among the trade, the feeling gaining ground that it is certainly unwise to throw away profits on goods that cannot at once be obtained for stock requirements, while giving competitors a chance to make greater profits by holding on to their own surplus supplies.

It is doubtful if there was ever a period when barbed wire was so greatly in demand, and so difficult to obtain for pressing requirements. Notwithstanding orders from jobbers, who anticipated the present rush, were sent to the mills early in the Winter with specified dates of delivery, the delayed shipments are of the most aggravating character. The mills are trying to do the square thing and average up the deliveries, but although pushed to the utmost, their facilities seem to be unable to cope successfully with the situation.

Manufacturers of many leading lines seem to have largely oversold the possibilities of their productive capacity, many of them having orders enough to keep their works occupied for several months ahead. Orders for leading staples are not delivered to the jobbers with that commendable promptness which keeps them from feeling

some anxiety as to filling the trade requirements showered upon them by their eager customers.

Prices continue to show unusual strength owing to these conditions, as a full order book produces a feeling of satisfaction which does not make low quotations a current feature of the expanding market. Iron and steel quotations are held up by advancing quotations, and the strength indicated reflects the controlling tendency of the general markets.

While no speculation is visible in the orders generously distributed to supply the wants of regular traffic, it is evident no pessimistic fears of a panic following in the wake of the tornado of chance supplied by Wall Street, interferes materially in the encouragement given to stated trade demands and the filling of general orders.

The labor market is liberally supplied with remunerative employment, and except where the restlessness engendered by too much prosperity has an adverse effect, and strikes are instigated, accompanied by the negative influences which such a course is apt to create, there is but little to fear but what the season will be an unusually productive one.

Factories are enlarging their facilities by increasing the area of their works, and the installation of machinery of greater power and productiveness. Enterprises of an industrial character, held in abeyance until stable conditions are promised by the general outlook, are now pushed forward to completion, and with increasing confidence in the profitable outcome made possible by the readiness with which new specialties are sought after by the progressive merchant, who is constantly seeking to add to the already extensive lines of goods which form an up-to-date stock of Hardware, at the present time.

The demand for export continues excellent, and increasing in extent and importance with each succeeding month. The depression abroad in Great Britain and Germany in certain quarters makes lower quotations abroad probable on a few lines of manufactured goods; and the exports on such lines are being modified or discounted in a way to prevent any possibility of loss, the exporters keeping fully informed as to commercial conditions and industrial inactivity in markets that have heretofore been sought after with commendable assiduity.

If it were not for the fact of so "booming" a condition of stock jobbing making Wall Street quotations of National importance, the conditions of confidence and trade assurance surrounding our industry at present would be of a noteworthy character.

## The National Debts of the World.

The recent announcement of a new British loan of \$300,000,000 lends interest to a statement just issued by the Treasury Bureau of Statistics regarding the national debts of the world. This statement shows in brief that the national debts of the world aggregated more than \$30,000,000,000 at the close of the nineteenth century, or 10 times as much as in the closing years of the eighteenth century. In 1793, at the beginning of the Napoleonic wars, the national debts of the world amounted to approximately \$2,500,000,000; in 1900 they were, according to the best information obtainable, \$31,000,000,000. In general terms it may be said that the world's national indebtedness in 1900 aggregated 10 times what it did at the beginning of the nineteenth century. Meantime population has increased 150 per cent. and gold and silver, which form the basis of the money with which debt payments are made, 300 per cent., though the proportion of the existing gold and silver which is turned into coin is now much greater than at the beginning of the nineteenth century, while the utilization of

the various forms of credit as currency may have increased the world's circulating medium quite in proportion to the increase in its national debts.

Whether national wealth has increased as rapidly as national indebtedness is equally difficult to determine, since official estimates of national wealth were made at the beginning of the century in the case of only a few nations. The wealth of the United Kingdom, France, Spain and the United States in 1800 is estimated at \$20,244,640,000, while Mulhall, in 1895, estimated their wealth at \$195,759,829,000, or practically 10 times that at the beginning of the century. The debts of these four nations in 1793 aggregated but \$1,630,279,000, and in 1900 were \$11,764,000,000, or 7 times as much as in 1793. If the rate of growth in wealth which has characterized the four nations whose growth during the century may be also properly applied to the world at large, it may be said that the growth of national wealth has about kept pace with that of national indebtedness, since national wealth in the cases where it can be measured is to-day 10 times as great as at the beginning of the nineteenth century, and the national indebtedness, where it can be measured, is to-day about 10 times what it was at the beginning of the century.

This enormous increase in national indebtedness is chiefly the result of wars, standing armies, and works of public utility. To this may be added a tendency in many cases to create an annual deficit by expenditures exceeding revenues made in deference to popular demand, which deficits ultimately take the form of funded or bonded indebtedness. But the bulk of these enormous debts is from war and war preparations and the construction of public works, such as railways, canals, harbors, and the improvement of waterways. Of the railways of the world, whose total cost has been estimated at \$30,000,000,000, about one-third are owned by national governments, indicating that approximately one-third of the increase in indebtedness has been applied to works of this character. But the fact that great wars have compelled the nations engaged in them to instantly make enormous additions to their funded indebtedness clearly identifies this as the principal factor in the great increase in national indebtedness which has characterized the history of national finances in the nineteenth century. In 1748 the debt of England was £76,000,000, while the Seven Years' War brought it in 1763 to about £133,000,000. The years of peace intervening between that date and the beginning of the American war somewhat reduced the debt, but at the termination of the war with the American colonies, in 1784, the debt of England was £273,000,000. A reduction followed during the 10 years of peace, but the 21 years of war from 1794 to 1815 left the total debt at £902,000,000, the highest point which it has ever reached. The 39 years of peace which followed reduced it to £800,000,000, but the Crimean war, which lasted two years, again increased it to £834,000,000, while the South African war, at the close of the century, recorded another increase of £30,000,000 of funded indebtedness, besides a considerable increase by exchequer bonds, to which may still be added the recent loan of £60,000,000 just announced.

Turning to France the evidence of increased indebtedness by war is equally apparent. Her national debts at the beginning of the Second Empire are estimated by Baxter at £245,000,000, and by the expenses of the Crimean, Italian, Chinese, Cochin-China, Mexican, and German wars, had, according to the same authority reached £550,000,000 by 1871, while the issuance of securities amounting to 2,277,000,000 francs in 1871 testifies to the cost of her war with Germany.

In our own history the increase of the interest-bearing debt from \$657,000,000 in 1860 to \$2,381,000,000 in 1865, and from \$847,000,000 in 1898 to \$1,046,000,000 in 1899, further evidences the relation of war to the growth of national indebtedness. The relation of war, with its ever increasing cost, to national indebtedness is further shown by a study of the detailed debt statements of the world at various periods during the century, presented in the following table. From 1793

to 1848 national debts only increased from \$2,433,000,000 to \$8,419,000,000. The latter half of the century, however, has experienced great and costly wars, the Crimean, the Civil war in the United States, the Franco-Prussian, the war between China and Japan, and those of the closing years of the century—and accompanying this period the national debts have grown from \$8,419,000,000 in 1848 to \$31,500,000,000 in 1901, as will be seen from the table which follows:

#### NATIONAL INDEBTEDNESS OF THE WORLD.

1793 .....	\$2,433,250,000
1820 .....	7,299,750,000
1848 .....	8,419,045,000
1862 .....	13,382,375,000
1872 .....	22,410,232,000
1882 .....	26,249,901,000
1901 .....	31,493,749,000

#### Relation of the Jobber to the Retailer.

The relation of the jobber to the retailer is influenced in two ways; first, through the "Credit Department," which determines the desirability of opening an account, and, second, through the sales department and the salesman, which makes the opening of an account possible. The relations which exist between the customer and the credit man should be of the most friendly and confidential character. The greater the degree of such relations the more helpful the credit man can be to the customer. No doubt every merchant, large or small, knows that his name appears in one or more of the commercial agency reference books, which are issued at stated periods, and that a rating is assigned to him, based upon his stated or supposed capital, his method of doing business, and paying his debts, his character, habits, honesty and ability. All may not know that the jobber and manufacturer of whom he seeks credit, in addition to the reference book, has his complete history so far as it is possible to obtain it in the form of special reports issued by the commercial agencies, replies to inquiries from bankers, attorneys, salesmen, neighbors, enemies as well as friends, and trade reports through the medium of credit clearing houses and through interchanges of inquiries between creditors. Changes of rating, unbusiness-like transactions, items of public record, reports of claims in hands of attorneys or collection agencies, failure to pay notes at maturity or drafts unpaid, in fact all unfavorable reports are carefully recorded on forms prepared for the purpose.

A true statement, based upon actual inventory, made by the customer is regarded by the credit man as of infinitely more value; he places more dependence upon it and it influences his judgment to a greater extent than all other information combined. The importance to the merchant of making a true, correct and intelligent financial statement, based upon actual inventory at the close of each year's business, to the commercial agencies, and to such of his creditors as may request it, cannot be over-estimated.

It is of great value to him as indicating a correct basis for credit, and as a means of his determining whether he is wasting his time as well as his capital in unprofitable business, or whether he is making such advancement as his capital and ability warrants. In addition to the importance of an exact annual inventory, these are the questions of adequate insurance, care in extending credit, promptness in making collections, prompt payment of bills when not discounted, keeping books that will show the status of the business at all times, the injury done to a credit standing by making unjust claims. The advisability of having as few creditors as possible, and especially the importance of avoiding those houses known to be arbitrary in matters of settlement with unfortunate debtors, or such houses as induce undue expansion by promises of large lines of credit and leniency as to payments. Many an honest merchant has been led to ruin by undue leniency on the part of his principal creditors. Many a failure has occurred as a result of bad advice. Many a failure could have

been prevented had creditors been consulted and a true and honest showing made them instead of a resort to an assignment or transfer of property. My experience leads me to believe that an exact and truthful statement made to creditors will always produce the best results in case of embarrassment, and that a resort to the processes of law for the settlement of the estates of those in embarrassing circumstances proves disastrous to both debtor and creditor. It leaves the debtor with the stigma of failure published broadcast, while a settlement quietly made upon the basis of an honest showing will be known to but few, if any, but those interested.

The credit man if given an opportunity will, as a rule, prove the best friend a merchant can have. He is in a position to give valuable advice. He is more or less familiar with the laws of all the States in which his house transacts business, and has at its disposal the services of the best attorneys in every town in every State.

The merchant who keeps in closest touch with him, and heeds his advice is the one who can count on being of the fittest who survive.

The prosperity of the retail merchant is essential to the prosperity of the jobber. Their interests, to a great extent, are mutual and their relations with each other should be of such a nature as to produce the greatest good to each.

It is important to both that their business relations always be pleasant. They can be best maintained by meeting all perplexing questions which may arise, in a spirit of fairness, and adjusting all differences on a basis of equity and with a due regard for the rights of each.

Next to the interest the customer has in his affairs comes the interest of the jobber who extends him credit.

T. H. GREEN.

### How Postage Stamps are Made.

Taking an average, every man, woman and child in the United States will use 53 postage stamps during the year 1901, 40 of them being of the popular 2-cent denomination. The total number consumed will be over 4,000,000,000, and nearly 1,000,000,000 of these will be of the 1-cent variety, while more than 2,000,000,000 will be 2-cent stamps. The following account of the process of manufacture employed for the printing of these stamps is taken from an exchange, as showing an interesting variety of American machinery:

"The first process in the manufacture of stamps at the money mill is to count the sheets of blank paper, which are purchased by contract. This work is done by women, who, indeed, perform most of the labor in the Bureau of Engraving, simply because they have proved themselves more capable than men for business of this description. Each sheet is the proper size and shape to make 400 printed stamps, with a small margin. After they have been counted the sheets are moistened by laying wet rags between them, at intervals of 20, and the following morning, when the rags are removed, the sheets are ready for the printing.

"The press for printing postage stamps is a queer looking machine, half automatic in its action. It is quite a small affair, with four square steel plates, set horizontally, occupying the four sides of a horizontal square. These plates always horizontal, travel around the four sides of the square at a moderate rate of speed, passing in turn beneath an ink roller. Each of them is engraved with the faces of 400 stamps and, after being inked by the roller, goes under a mechanical rubber, which removes most of the ink. Then the plate is cleansed of all the rest of the ink, save what is in the graven lines, by a man who rubs it with a cloth and his bare hands, and finally it goes under a dry cloth-covered roller which, a sheet of white paper being interposed, does the printing.

"All of these processes are accomplished four times inside of half a minute. A girl supplies the fresh white sheets, as the plates come round to her in quick succession, and another girl takes them out, fresh printed, as they appear on the other side of the cloth-covered roller, piling them neatly as she

does so. Then the sheets, so new and beautiful with their bright-colored impressions, are carried to another room to be counted, after which they are laid on racks in wire cages on wheels and hauled into a steam-drying room, to stay over night.

"On the following morning they are taken into the examining room, where each of them is carefully inspected for defects. Torn or otherwise imperfect ones are rejected, but all fragments are carefully stuck together, so that each sheet may be accounted for. Each person in this department of the money mill is expected to examine 12,500 sheets in a day's work.

"Now comes the gumming of the stamps, which is one of the most interesting steps in the whole process. Each sheet of 400 is taken in its turn and placed between a pair of delicate steel hands, which pass it beneath a roller that carries a solution of fine gum, composed chiefly of dextrine. An endless belt carries the newly-gummed sheet through a wooden box 100 feet in length, which is lined with coils of steam pipes, so that it comes out at the other end a few minutes later, perfectly dry, being received thereupon by deft fingers of steel and laid accurately upon a pile of similar sheets.

"There are eight or ten of these machines working in a great room together, so that not much time is required to gum 1,000,000 stamps. As the sheets come out at the farther end of the drying boxes they are more or less crinkled, owing to the contraction of the mucilage, but the crumple is removed and the sheets made perfectly smooth by rolling them, a score or more together, with the hands—a process which requires no little dexterity. If any portion of a sheet is imperfectly gummed it is rejected, and such 'rejects,' as well as all torn or otherwise damaged stamps, are disposed of, after due counting, by burning them in a furnace, a special Treasury Committee having charge of the work of destruction.

"The gummed postage stamps, before they are ready for use, must be perforated, so as to be torn apart easily, and this process is performed by machines with rows of small toothed wheels of brass set parallel to each other. These also are run by women, who pass each sheet beneath the wheels once for the longitudinal perforations, after which they are handed over to other and similar machines, to be perforated crosswise. Then, at last, they are finished, and are counted once again before being packed in parcels for shipment to the post-offices."—*Exchange*.

### A Careless Firm.

A correspondent of a contemporary, writing from the Straits Settlements, says that in October, 1899, he applied to a Birmingham firm for a price-list of tools, but received no reply until September, 1900, or eleven months afterwards. Just before the reply arrived the correspondent repeated his application, and in due course received an intimation that the desired price-list had been posted by the same mail, but up to January last it had not arrived. Sixteen months were therefore entirely wasted by the negligence of the Birmingham firm. Will nothing short of a billion-dollar combine in tools and Hardware arouse British exporters from this sleep of death?—*Ironmonger*, London.

Beggar—Say, boss, won't you help a poor fellow out of a job?

Joakley—Gracious! Can't you get out of it without my help? Pretend you're sick or something.—*Philadelphia Press*.

"Couldn't I be squeezed in there somehow?" asked the pretty girl, as she vainly sought entrance to the crowded car.

"If you can get in, I have one arm free," exclaimed a young man in the centre of the car.

And the conductor rang six "go-ahead" signals on the fare register.—*Baltimore American*.

## LEGAL CORRESPONDENCE.

Conducted by William Marston Seabury, Attorney and Counsellor at Law,  
No. 43 Cedar Street, New York.

Any subscriber to "HARDWARE" is privileged to ask any legal question he pleases in this Department and it will be answered free of charge. Address all communications to Editor "HARDWARE," No. 277 Broadway, New York City.

**QUESTION.**—Some time ago I sold a quantity of shovels to a purchaser, and not having the cash to pay for them, asked if I would take his promissory note, payable in thirty days. I told him I would if he obtained some responsible person as his endorsee. This he did and I delivered the shovels. The note is now due and I demanded payment from the maker, which was refused for the reason that he had nothing. I at once notified the endorsee of the fact, and that I looked to him for payment. He has refused to pay and says that I cannot proceed against him until I have tried to collect from the maker and failed. All the parties live in Texas. Kindly inform me if I can sue the endorsee at once, or must I sue the maker first, even if he has nothing?

**REPLY.**—Article 1204 of the Revised Statutes of Texas provides that "the assignor, endorsee, guarantor or surety upon any contract, and the drawer of any bill which has been accepted, may be sued without the necessity of previously, or at the same time, suing the maker, acceptor or other principal obligor, when he resides beyond the limits of the State or in such parts of the same that he cannot be reached by the ordinary process of law, or when his residence is unknown and cannot be ascertained by the use of reasonable diligence, or when he is dead, or actually or notoriously insolvent." If, therefore, you can show that the maker is actually insolvent or worthless, you may sue the endorsee without suing the maker first. Generally the legal remedies must be exhausted against the maker of the note before an endorsee can be sued, but the case of an insolvent maker presents not an uncommon exception to the general rule.

**QUESTION:** In 1890 I made five promissory notes, each one falling due at intervals of two months. I was unable to pay the notes as they fell due, and in 1896 the executrix of the man to whom the notes were made payable, brought suit on them. I made three payments then and the suit was not pressed against me, although it was not formally discontinued, and no judgment was entered against me. In 1900 the executrix again threatened to sue me and I made two payments on the notes. After this the executrix brought suit upon the notes and stated in the complaint that I had made a payment on each one of the notes, whereas, in reality, when I made these payments, I specified particularly that they were to go toward the satisfaction of the notes first falling due. Can I make any defense to these notes on the facts I have stated?

**REPLY:** If you directed your creditor to apply your payments to the notes first falling due, you have the right to leave the payments so applied. You may, therefore, plead as a defense to the first notes that they are paid, if your payments were sufficient to satisfy any of the notes. If you have not made payment on the other notes since 1890, they are barred by the Statute of Limitations of this State, and you may plead this Statute as a complete defense. If the action brought in 1896 on these same notes was never formally discontinued, and no judgment was ever entered against you, the former action is still alive. This would be a further defense to you, as a Statute of this State allows one to plead as a defense to an action brought against him, that there is another action pending between the same parties for the same cause.

**QUESTION:** I have had some difficulty with my partner and believe that he has misappropriated some of the firm money. I have asked him to tell me what has become of certain money which I know he collected, but he has refused to give me any satisfaction whatever. Kindly advise me as to my rights. Could I have my partner arrested?

**REPLY:** A partner is entitled to have from his co-partner an accounting of all the firm money and property. If you have demanded this and you cannot obtain it amicably, we would advise you placing the matter in the hands of an at-

torney for the purpose of bringing an action against your partner for an accounting. As to the order of arrest for the cause you mention, we are inclined to think that one partner cannot obtain this remedy against the other.

**QUESTION:** My father died some time ago and we have been unable to find any will, although we are confident that he left one. We have questioned his lawyer and he says that he drew a will for my father about a year before he died. About one week after my father's death there was a fire in our house and a private box belonging to him, together with its contents, were entirely destroyed. We have always believed that the will was in this box and was destroyed. How will his property be distributed? Could the will be probated if its contents could be proved by the lawyer who drew it?

**REPLY:** Unless this will is proved as a lost or destroyed will and admitted to probate as such, your father's real property will descend according to the statutes of descent in force where the property is situated, and his personal property would pass according to the statute of distribution in force at the place of your father's domicile. If you can prove the contents of the will and the fact that it was either lost or destroyed after his death, it may be admitted to probate and the property would be distributed according to the terms of the will.

**QUESTION:** A few months ago I was obliged to employ a man to attend to certain machinery in my factory. I put an advertisement in the paper and finally engaged one of the men who applied for the position. He said he was a machinist and was thoroughly familiar with the kind of work required of him. I cautioned him to be careful in oiling the machinery while it was in motion, and he said he understood his business and knew how to take care of himself. Not three days after that he was bending over a machine which had come to a stop when the machine suddenly started and crushed three of his fingers on his left hand. He now threatens to bring suit against me for damages, as he says if the machine had been in proper condition it would not have moved and injured his hand. Kindly inform me whether in your opinion the man has any claim against me.

**REPLY:** As you describe the accident, we are of the opinion that the employee was guilty of contributory negligence and that he cannot therefore recover damages for his injury. You acted properly when you employed him in informing him of the dangerous character of the work. It seems to us that a machinist employed to attend to machinery in a factory should know that a machine may start unexpectedly and that he would not place himself in a position of danger. We are of the opinion the risk described was incident to your employee's employment and was assumed by him, and that, consequently, he cannot recover.

## How Steel Pens are Made.

Few people know what a heap of bother and expense it is to make a pen. For instance, the steel is first rolled into big sheets and then cut into strips about 3 inches wide. These strips are annealed. In other words they are softly heated to a red heat and permitted to cool very gradually, so that the brittleness is all removed and the steel is soft enough to be easily worked. Then the strips are again rolled to the required thickness, or rather thinness, for, as you know, the average steel pen is not thicker than a piece of letter paper. The blank pen is next cut out of the flat strip and the name of the maker stamped upon it. Then comes the molding process. The pen is put in a mold which gives it grace and strength. The rounding enables the pen to hold the requisite ink and to distribute the ink gradually. That little hole which is cut near the end of the slit also helps to make the ink run properly and regulates the elasticity of the pen. Up to this time the metal is soft and lead-like. To make it brittle and springy it is tempered by being heated to a cherry color and then suddenly plunged into cold water. But it is then too brittle for use, so the temper of the steel must be drawn. The elasticity varies with the color, and each color is obtained by suddenly plunging the pen into cold water. Then follow the slitting, polishing, pointing and finishing, all of which is done by expert workmen.

### Bank Grill Work.

The J. E. Bolles Iron and Wire Works, Detroit, Mich., have recently furnished a very neat but inexpensive design of steel grill work for the Peninsular Savings Bank, Detroit, at their new Gratiot Avenue Branch, which we illustrate herewith, the half-tone cut being taken from a photograph of the interior of the bank. This work has been greatly admired for its peculiar combination of beauty and simplicity. The railing, including the bevel plate glass base, is 42 inches high from the counter. The wide panel is what is known to the trade as  $\frac{1}{4}$  twist scroll border work. It is all hand-made and produced only by skilled workmen. The steel is accurately

BANK GRILL WORK.

formed by hand, then interwoven, forming lock joints, with a neat scroll border finish. The railing has a molded top finish which surmounts a narrow grill panel and gives what the architect, E. C. Van Leyen, of Detroit, doubtless sought after, viz: Uniformity of design pleasing to the eye and in harmony with the general interior of the bank. The Bolles firm make a specialty of Bank Metal Work, Elevator Enclosures and Cars, and anyone requiring work in this line will do well to correspond with them and secure their latest catalogue.

### On Exclusive Agencies.

The writer of the following article, who represents a large number of American manufacturers in a British Colony of commercial importance, is fully conversant with the subject on which he presents his views, and what he says should be perused with interest as coming from one who makes his statements by authority of a wide experience:

*Editor Hardware:*

I was interested in reading an article recently published in your columns on "Exclusive Agencies."

This is a matter which deserves very serious consideration, especially as the conditions in different markets vary.

I have carefully watched the development of Exclusive Agencies in Australasia, but am bound to say that it is only in Specialties, Sewing Machines, Bicycles, Farm Implements, etc., that success has been achieved, and in these cases, the Exclusive Agent has sold to the consumer, not to the trade.

The question considered in relation to regular trade lines assumes a different complexion.

For instance, if a manufacturer of wrenches gave the handling of his goods to one jobber or importer, naturally the other jobbers and importers would conclude that this particular buyer was obtaining terms not available to them, and seek another source of supply and virtually combine in opposition to the goods represented by Exclusive Agent.

This is a natural phase of competition, but fortunately it is not necessary for manufacturers to create this position.

It is open for them to employ a representative and so to secure the canvass and their legitimate share of the whole trade. This is also the only way in which the manufacturer can make uniform quotations to the trade in which connection he has the security that his best price is given to each buyer, this ensuring to him the full advantage of his ability to secure the trade, as well as a personal interest in the trade he is doing.

What American manufacturers have to do, in my opinion, is to secure a representative of sound commercial training and integrity, put him in possession of samples of their goods and bed-rock prices. Their representative canvasses the trade and the orders reach the manufacturers through established channels while the manufacturers have direct advice from their representatives of the conditions of trade and competition.

If a manufacturer can afford to employ a representative in his own interests, well and good, but I imagine that the "Syndicate" representative is the means by which the American manufacturers must keep their trade alive in foreign countries. SYDNEY.

### Australian Nicknames.

Although the Australian Colonies have now been linked together in a commonwealth, it is not probable that the nick-names bestowed by one province on another will be abandoned. The inhabitants of New South Wales have long been known as "cornstalks," an allusion to the length and slimness of the average young New South Wales native. Victorians are known as "gum-suckers," with reference

to the gum that is found on many native trees, some of which is relished by juveniles. "Crow-eaters," as applied to the South Australians, owes its origin to a statement that in times of drought the wheat farmers of South Australia are driven to the source suggested for food. "Wheatfielders" is a more euphonious name sometimes used for the same province. The Queenslanders are known as "banana-landers," that tropical fruit growing there abundantly. Western Australians—or, as they are now generally called, Westralians—are known in the east as "sand-gropers" or "gropers." The Westralians themselves group all the other States into "t'other side," and call the residents "t'other-siders." Tasmania, the green little isle that is much like England in climate and other characteristics, is generally regarded as very quiet and rather behind the times, and is referred to as "the land of lots of time," "the land of sleep a lot," and so on, while the inhabitants are called "Tassies," and "jam-eaters," the latter being an allusion to the great fruit production of the "tight little island."—From the *Leisure Hour*.

"This is a great story," said the new reporter, "but I can't think of a good head for it. It's about a trusted employee, whose accounts were found to be crooked and when he was accused of it, dropped dead."

"That's easy," said the Snake Editor, helpfully; "head it 'Died from Exposure.'"—*Philadelphia Press*.

"This story of yours," said the editor. "I would call 'A Poor Relation.'"

"But," said the author, "there is no such character in it."

"No; but that's the character of the story itself."—*Ex*.

"Did you see Jones? He was looking for you."

"Yes; I saw him, but I managed things so he didn't see me."—*Ex*.

## CONSULAR COMMERCIAL COMMENTS.

### How to Create American Trade in France.

#### CONSULAR AID.

The impetus that has recently been given to exportations from the United States, and the zeal that American exporters are showing to increase their trade with foreign countries, make necessary certain suggestions for their assistance.

This consulate—and it is presumed other consulates also—is flooded with requests from American citizens for information and aid in extending their trade. The form of the requests is generally that names and addresses of firms interested in particular branches of commerce in which the writers are engaged be furnished by the consul, or that their catalogues, which are often sent in large quantities and usually lack sufficient postage (which must, however, be paid to the French postman), should be distributed by the consular officer.

The parties making these requests are as a rule entirely unfamiliar with the country and its requirements, and, if the consul makes any suggestions that are contrary to the manufacturer's preconceived idea, his word is considered unsatisfactory.

It is pleasant to give satisfaction to those who ask, and doubly so when the interests of one's country are advanced. It is therefore respectfully suggested that American exporters desiring to extend their foreign business comply with the following conditions before they take the trouble to send catalogues, etc., to European countries.

#### SEEKING TRADE IN WRONG PLACES.

The American exporter must understand the wants of the market he desires to enter and supply before he can find purchasers. It is no proof or reason that because a certain article finds a ready sale in the United States, it will sell abroad.

A short time ago, two letters from American exporters were received at this office. One was from a manufacturer of refrigerators, the other from a manufacturer of kitchen ranges having hot-water backs.

After carefully studying this consular district, it was found that only two private houses possessed refrigerators (both of which were owned by Americans who brought the articles from the United States), and two ranges having hot-water backs were also in houses belonging to Americans.

Ice is a commodity that ordinary persons here never use except in sickness. The winters are so damp and mild that practically no ice can be collected; therefore, if any be consumed, it must be manufactured artificially.

The ranges with hot-water backs are unknown by these people. It will be many years before such articles are required; while, on the contrary, plain, simple base-burners (using bituminous coal) will find a ready and steady sale if manufactured especially for the French market and to suit the French taste.

Rocking-chairs never sell, with rare exceptions; but plain chairs, such as have been used in France for centuries, will continue to be sold for another hundred years. This rule applies to many other articles popular in America, but unsalable in France.

#### LANGUAGE, WEIGHTS AND CURRENCY.

Every catalogue, business card, etc., that is to be distributed in France must be in the French language; weights and prices must be expressed according to the metric system and in francs. No dealer, either wholesale or retail, is going to translate any documents or push American articles unless he is richly paid for the trouble. An ounce, bushel, yard,

pound, and mile carry no meaning to the ordinary Frenchman, and he would prefer to pay more for an inferior article described in familiar terms and language than to bother trying to decipher a paper in an unknown tongue and with unintelligible weights, measures and currency. Not only should the French language be used, but catalogues must be attractive to insure their being read.

#### PACKING.

All commodities destined for table use, such as preserved meats, fish, fruits, preserves, etc., should be neatly, attractively and carefully put up and packed. The appearance of packages has much to do with selling merchandise in France. There is no country in the world whose people are more particular as to the manner in which food (and in fact everything) is presented to them than the French. It is certain that many excellent articles fail to be accepted through faulty and careless or slovenly packing.

#### GOODS MUST EQUAL SAMPLES.

Any deviation—even an unintentional deviation—in the shape, style, or color of the wrappings, or any difference in the goods delivered from those shown, is very apt to awaken suspicion in the mind of the foreign purchaser, although no wrong may be done or intended; exact conformity to samples, on the other hand, always inspires confidence.

#### INFORMATION WITH REGARD TO PRICES AND COSTS.

When presenting bulky goods, such as hardware, agricultural implements, wood, tools, etc., the seller should be careful to give the purchaser a definite idea as to the probable costs. If a French buyer can know that the merchandise will cost so many francs per 100 kilograms in New York, and that the freight to Havre, Bordeaux, Marseilles, or any other French port will be a certain sum on a given date, with an average price for a year, he is enlightened on the very points that he wishes to know before considering the purchase. Sales may be made more readily in this way than otherwise.

The exporter is advised to state that the price given includes cost, freight and insurance. It is also wiser for the seller to insist that the buyer shall pay the customs dues, dock dues, and inland charges (if any), because the consignee can make better terms than the foreigner can ever hope to make.

#### STANDING OF FRENCH MERCHANTS.

There is published in France a commercial directory called "Le Bottin;" copies of this book may be found in the libraries of nearly all large American cities and in many of the important hotels in the United States. "Le Bottin" gives names and addresses of manufacturers, dealers, and merchants in the several Departments of the country, which are classified according to trades, professions, etc., in the various cities and towns of France. Exporters will find this an aid in trying to extend their foreign business; if they care to examine this directory, they can easily find out the names of persons apt to be interested in their line of trade, and if they desire further information concerning the French dealers, the consul of the district in which these people live can readily give any information about them that he may be able to obtain.

The solvability of merchants, manufacturers, and dealers in France is perhaps more difficult to ascertain than in the United States, but general data can be gotten in most instances without much trouble. All banks in France will give information as to any house or firm required for a small fee—from 25 to 75 cents for each person.

If the foregoing suggestions are followed, time will be saved to the exporter and consul and much useless correspondence avoided.

WALTER T. GRIFFIN,

LIMOGES, March 14, 1901.

Commercial Agent.

### New York Credit Men's Association.

The regular bi-monthly meeting and dinner of the New York Credit Men's Association was held Thursday evening, April 25th, at the Drug Club. About 150 members were present. These meetings will not be resumed till the Fall season.

A. H. Watson, President of the Association, presided. Letters of regret were read from Samuel Rosenthal, President of the Baltimore Credit Men's Association, who was detained by illness, also a communication from David B. Hill, Thomas B. Reed, George W. Ray, William Sherer, Manager of the Clearing House, and Bishop Henry C. Potter.

President Watson introduced Marcus H. Marks, President of the Wholesale Clothiers' Association, who said in part:

Being here as a representative of the clothiers, I will tell you a few things about our Association, which for over eighteen years has successfully served a very large membership. Its purposes briefly are, First—interchange of credit information. Second—social intercourse leading to the better acquaintance among our members and thus promoting the faith necessary to the opening of our ledgers to each other. Third—the betterment of trade conditions, and the relief from abuses and trade evils by means of agreement among ourselves and the promotion of corrective legislation.

He urged the formation of organization in every trade and then a central organization. By having each trade organized, delegates from these associations could be elected to the Credit Men's Association and delegates elected to form associations for other purposes. New Associations formed of such delegates would wield tremendous power on account of the great constituency behind them. The demand for improved legislation coming from such a body representing all trades would be most influential. I trust that this Association will give this matter some thought, and that the prominent members of all trades represented in the Credit Men's Association will use their efforts to form associations of their trades, which will be all powerful in the commercial community.

President Watson then introduced Rev. Dr. William S. Rainsford, who said:

The tendency of modern life, in which we are active to a point of exhaustion at times, is to bind too many blinkers on a man. We may deplore it. We cannot evade it. The tendency of modern life is to force us all towards specialism. If an association like this is so fortunate as to have its specialism presented, I congratulate you all the more. It seems to me that perhaps in the minds of some of you the response might arise, well, it is very well to speak of life being over specialized, and we recognize it. We recognize in our own life with the long hours of work and toil of the day, the weariness that follows our concentration of attention under the gulfs of condensation, under which we all toil, leaves us very little time for anything but the duties of our business. If there ever was a case of the kettle calling the pot black face, it is the case of a clergyman coming to a lot of credit men and suggesting that life is over specialized. You men who are taken up with the affairs of life need to make time for a kind word, a kindly act.

The speaker dwelt at length on the purity of homes and business, and stated that the key-note of to-day is association. Those trades, those men, those interests that combine, will lift those away that have not sense enough to combine, and they will fall. The only way to build up this great country—there is no profession to which a good man put his hand yet, has no profound basis to it—not that we shall simply have a great nation of seventy-five millions of people, but a greater nation under liberal institutions. Make the darkness less dark and make truth, honor, and manhood more evident to the wide world.

President Watson then introduced Hon. Abraham Gruber. Mr. Gruber prefaced his remarks by telling some witty ex-

periences he had while a credit man, and also related several interesting anecdotes that were very much appreciated. Mr. Gruber stated there was only one way to get rich in this country, and that was to acquire possession of a franchise for nothing. You, as business men, are affected by everything wrong in public life, and I know of no class of men whose voice is more potent with legislators than that of the business men. You have got to buy your goods and sell them at a small profit. You have got to toil many hours during each day and often at night. At the end of the year your net profit is very small. You don't find any of the great big millionaires country men who were merchants. You don't find any of the men who now rule the financial destinies of the whole country business men or manufacturers. They are all men who got tied up to the enterprise in which they are engaged, by government aid.

President Watson then introduced Mott D. Wilbur.

Mr. Wilbur spoke of his early experiences in California, and dwelt at length on the value of organization and the value to be derived by New York merchants if the Nicaragua Canal is built.

President Watson also introduced B. I. Shoninger, Treasurer of the American Chamber of Commerce, at Paris, France, who stated, as Treasurer of the American Chamber of Commerce in Paris, the only organization of its kind in Europe, I can cheerfully say that all of its members are heartily in favor of unity and combination. It was with that end in view that we formed this chamber in 1893. We started with twenty members and are to-day two hundred paying members, besides 100 honorary members. We can do a great many things that single-handed we cannot do or even attempt to do. Not only are there many things in France that are difficult to carry through single-handed, but even combined there is great difficulty, and I must say that the most friendly relations exist between the two governments.

The meeting then adjourned.

### Clarke Merchant.

The *Boston Commercial Bulletin* says: "Clarke Merchant, of Merchant & Co., Inc., of Philadelphia, has consented to accept the presidency of the Schuylkill Traction Co., of that city, when the board of directors meet to organize shortly. He recently made a thorough inspection of the property and its proposed branches, and was abundantly satisfied with its worth as an investment. Mr. Merchant is a Philadelphian, and is one of the wealthiest and most substantial business men of that city, having been connected with its commercial interest for the past thirty years. He is the president and the virtual owner of the business of Merchant & Co., Limited, and is also president and virtual owner of the International Sprinkler Co. He is also largely interested in the manufacture of tin, copper and brass, and is one of the largest manufacturers of tin in the United States, having immense works at Twenty-first Street and Washington Avenue, Philadelphia, and which was one of the first plants of this kind established in America. Mr. Merchant is about sixty years of age, and is a sturdy and very active man, who keeps in close touch with the interests with which he is identified. His going into the Schuylkill Traction Co., places that corporation on a firmer financial footing than it ever was before, and means much for that region. Mr. Merchant's life has been a very active one. He graduated from the United States Naval Academy at Annapolis in 1857, and immediately entered into active service in the navy and served with distinction during the Civil War, and rose to the rank of commander of one of the war vessels. He resigned his commission in 1867 and entered upon his present active business life, which has been an eminently successful one."

"It was understood that the cashier had been a lamb in Wall Street."

"Therefore," said I, with a happy smile, "he skipped."—*Ex.*

## THE PAN AMERICAN EXPOSITION, 1901.

### NEW ENGLAND BUILDING.

A splendid structure at the Pan American. Each of the New England States will be well represented with exhibits of their resources.

The New England States are represented at the Pan American Exposition with a building that will be used as headquarters for New England visitors, and exhibits of the industries and national resources of that section of the United States, to be made in the different exhibit buildings of the Exposition.

The New England Building is situated in the Court of State and Foreign Buildings at the Pan American Exposition. It reminds one of a fine old colonial mansion. Its broad piazzas and terraces are typical of a New England

rectly with the Grand Court, and is in almost as central a position as the New York State Building. It is near the lake, in the midst of over 10,000 transplanted shrubs and trees. The cost of the New England Building was \$15,000.

### THE OHIO STATE BUILDING.

An imposing structure designed to represent one of the great Middle States.

Ohio, displaying commendable and practical enterprise, has provided a very appropriate and beautiful building at the Pan American Exposition. The site chosen gives the building a prominent position, as the ground is twelve feet higher than the water level of the mirror lakes. It stands on the broad plateau near the Triumphal Bridge at the intersection of the two principal thoroughfares and at the head of

home of the revolutionary period. The design is plain, yet rich. The building is 104 feet long by 52 feet wide. The walls are covered with staff, painted to represent red brick with white marble trimmings. The shields of the six New England States are placed in colors on the front, and there is a staff for each State flag. On the ground floor is a large reception hall, nearly 47 feet square, supported by four columns, and at the rear are colonial staircases leading in two directions from the first landing. On the right of the reception hall are the bureau of information, the coat-room and custodian's quarters. On the left are lounging and writing rooms, from which a beautiful view of that section of the Exposition is possible. In both these rooms large colonial fireplaces are arranged and the furnishings are all in accordance with the colonial idea. The arrangement on this floor is simple, thoroughly convenient, and withal, decidedly in keeping with what the building will be used for. Upstairs there have been arranged six large rooms. Each New England State is allotted one, and it is used for a rendezvous for people from that particular State.

This building is located on a street, or path, connecting di-

rectly with the Grand Court, and is in almost as central a position as the New York State Building. It is near the lake, in the midst of over 10,000 transplanted shrubs and trees. The cost of the New England Building was \$15,000.

The plans for the building were designed by John Eisenmann of Cleveland and approved by Governor Nash and State Auditor Guilbert. The size of the building will be 84 by 122 feet. A ten foot terrace walk extends around the outside, being widened at the northwest corner to a circular form, thus providing an ample approach from the dock landing. The first floor contains an assembly room, 30 by 53 feet, with a ceiling 24 feet high. This floor will also have a commissioners' reception room, ladies' reception room and private offices with a parcel room and postoffice. The second floor contains a sitting room 23 feet square, with extra rooms for

attendants and four guest chambers for the accommodation of State visitors.

The lower floor is intended for the use of the general public and the upper floor for the commissioners, State officials and the State guests. Natural gas will be used for heating

#### EMERGENCY HOSPITAL.

How Exposition visitors will be cared for when ill. Fine building, with a competent staff and up-to-date equipment at the Pan American.

A very pretty hospital building stands near the west end

and electricity for illuminating purposes. The artistic manner of lighting will constitute part of the interior decorations. On each face of the four corner pilasters of the porch, the State monogram is interwoven with a wreath of buckeye leaves and fruit, the design containing a lighted torch. As the approach from the dock landing will be the most picturesque, the building will be embellished at the northwest corner with a statuary group. The background worked in relief upon the pilaster shows the great seal of the State with its hills, trees, sunrise and sheaves of wheat and arrows. In the

of the Mall. Floor area rather than elevation is a prominent feature in the construction of this important adjunct to the Exposition. Utility, first, last and all the time is the prime consideration in this design, though it is by no means a case of utility unadorned. In conformity with the general Exposition plan, the Spanish Renaissance has been freely treated, in this instance, with a strong leaning towards the old mission interpretation.

Having a frontage of 90 feet on the Mall, the main wing has a depth of 38 feet with a height of but one story, except

EMERGENCY HOSPITAL, PAN AMERICAN EXPOSITION.

foreground is the centre figure standing on the prow of a boat to typify the State. The Ohio River is represented by a mermaid and Lake Erie by a triton.

The State of Ohio is represented at the Pan American Exposition by a very able commission consisting of three members. Charles L. Swain, LL.B., of Cincinnati, has been chosen chairman. The other two members are the Hon. W. S. McKennon, of Ashtabula, and the Hon. Samuel L. Patterson, of Waverly.

in the centre, where it assumes the form of a square tower with a rounded top. This tower attains to the pretentious height of two stories and is surmounted by two flagstuffs. One staff supports the Exposition flag and from the other waves the well-known Red Cross Banner.

A rear wing one story high runs back from the centre portion a distance of 56 feet, with a width of 32 feet. This form of construction lends itself readily to this picturesque reminder of the early struggles of our first missionaries.

The main hospital entrance is from the Mall opening directly into a handsome rotunda decorated with tropical plants and suitable hangings of pictures, drapery, etc.

In the matter of equipment and appliances, everything is of the newest and best. A new litter attracts considerable attention; it is carefully balanced and so arranged that one attendant can operate it easily and noiselessly as it runs on two wheels about 20 inches in diameter which are fitted with large inflated rubber tires. Sterilizing apparatus with an apartment for instruments and another for towels and linen, is another necessary arrangement.

Roswell Park, M. D., is the director, Vertner Kenerson, M. D., deputy director and Dr. Alexander Allen, is the resident physician, a staff which will at once inspire confidence in all who are acquainted with these gentlemen or their work. The efficiency of this department is an illustration of the manner in which the Exposition is designed and executed in all its departments. Everything has been carefully arranged according to a great comprehensive plan the details of which have been worked out in every instance with careful, conscientious precision.

In regard to the importance of this adjunct to the Exposition, it may be said that up to the first of March five hundred and four cases have been treated on the grounds, only one of which proved fatal. These include all forms of sickness and accidents to workmen employed upon the construction work. In this connection it is well to note that the number of cases treated at the Omaha Exposition was about three thousand, while the history of the hospital at the World's Fair in Chicago gives a total of 11,602 medical and surgical cases treated, resulting in 69 deaths.

#### Some Important Requirements of Good Merchandising.

Ability does not necessarily imply large financial means, but rather that business is being done within the scope of income. Disposition as to accuracy and good faith may be present in the comparatively poor man and absent in the rich. In other words, the individual or firm of limited resources may feel a keen responsibility in the maintenance of credit by the prompt payment of accounts, while those of larger means may be either careless or indifferent, and of the two classes the wise credit man will invariably prefer the former.

Webster defines credit as follows:

Moral Credit is the confidence, esteem and good opinion of others, founded upon the belief of a man's veracity, integrity and virtue.

Commercial Credit: Trust, a transfer of goods or chattels in confidence of future payment. When the merchant gives credit he sells his wares on an expressed or implied promise that the purchaser will pay for them at a future time. The seller believes in the solvability and probity of the purchaser, and delivers his goods on that belief or trust; or, in other words, gives him credit.

A good credit standing is worth striving for, and should be the goal for which every individual or firm should aim, and once gained should be guarded as closely and carefully as they would their own homes, as it means honor, reputation and business success. Many firms—those that know the importance of good credit—are negligent and indifferent to their credit standing, and think because they have the capital back of them, that they can pay their bills or accounts at their own convenience, and in the large majority of cases have their own way. A person or firm is not good in a credit sense no matter what they are worth, if they do not pay their accounts when due. A nation's standing in the world is measured by its credit. The commercial standing of an individual or firm depends upon his or their credit.

It is a well-known fact that the large majority of merchants in the small towns and villages, and even in large cities are men with no especial training in their respective business callings. If a young man decides that he wants to become a lawyer, doctor or minister, he knows that he must

have the necessary schooling and training, but if he is going to be a merchant he thinks all that is required is to secure a position in some store, and it does not make any difference whose store as long as he gets started, as many people appear to think because a man is in business, he must be making money and knows how to run a successful business. Once started, he is taught to do things according to the proprietor's methods, whether right or wrong, and very generally wrong. The main reason for so many failures is ignorance of the first principles of doing business in an intelligent and systematic manner. Mr. Harlow N. Higginbotham, in one of his articles, has said the successful credit man was born, not made, and we think this remark will apply equally well to the successful merchant.

The credit question is one of the live issues of the present times. Every intelligent and up-to-date merchant or firm has a credit man or some person to look after this branch of their business. Nearly all large firms and corporations have thoroughly organized and well-equipped credit departments, and the credit man is one of the important factors in such concerns. You can pick up a paper or trade journal reporting the proceedings of any business convention, but you will find the subject of credit mentioned. This is entirely due to the efforts of the national and local associations of credit men, and certainly shows that they are making headway. Credit men are, to a very large extent, entrusted with the financial well-being of their respective firms, and how to discharge the duty so as to incur a minimum percentage of loss, is one of the most difficult problems. A *minimum* percentage of loss is thus quoted because all experience teaches that, notwithstanding the best efforts and caution, loss there *will* be, and the business man, in making his estimates for the future acknowledges this probability by making the probable loss a feature of his calculations.

R. E. ROGERS.

#### American Mill Machinery for Turkey.

Capital has been enlisted for the introduction into the vilayet of Mamouret-ul-Aziz of flouring mills and of mills for spinning and weaving the simpler cotton fabrics. It is desired to secure American machinery for this purpose. At present, wheat is ground by primitive methods. The cleaning of the cotton is likewise effected in a very primitive manner.

While the vilayet produces an abundant supply of cotton (about 5,000 short tons per annum), the woven tissues are imported almost exclusively from Manchester.

There is an abundance of water power for milling purposes.

I would request American manufacturers of cotton gins, machinery for cotton mills (including full installation), and machinery for flouring mills (including installation) to send to this consulate their descriptive price lists.

In these catalogues, attention should be directed more particularly to the simpler mechanical devices, which can be conducted by low-grade workmen and can be most easily repaired in a country destitute of skilled mechanics and modern appliances.

Lowest net prices should be indicated, including satisfactory packing for a long journey, involving a fortnight's constant jolting. It would be advisable in subsequent communications to give net prices for the simpler types above mentioned f. o. b. Samsoun—i. e., via the English direct lines, transshipping at Liverpool. THOMAS H. NORTON, Consul.

HARPUT,\* February 25, 1901.

\*Consul Norton gives his post-office address: Mezreh, Mamouret-ul-Aziz, Turkey.

His Mother—You know, Harold, it hurts me just as much as it hurts you.

Harold—Yes—b-but you d-d-don't have to s-s-sit down on the p-p-place afterwards.—*Ex.*

## Recent Trade Publications.

G & J TIRE Co., Indianapolis, Ind., have recently published an exceedingly attractive pictorial illuminated booklet, every illustration contained in it being printed in several colors, making it original and unique compared with similar publications devoted to the exploitation of the Bicycle business. We present herewith an illustration showing the cover, which is printed in several colors in the same manner in which the illustrations throughout the book are. It is in-

G &amp; J TIRE CO.'S BOOKLET.

tended beyond a doubt for general distribution through the trade, and is certainly of a character to be retained by the recipient, the very novelty of its style making this possible. It is written in an attractive, readable manner, taking the superior merit of the G & J Tires for a text, and information upon every part and style of which is given in its contents, together with a price list of the various tires, and also the various parts, making it not only a useful and desirable publication of the kind, but one worthy of large distribution.

P. & F. CORBIN, New Britain, Conn., have recently issued another of their artistic publications for which this firm is noted, having reference to "Ball Bearings" in Loose Pin Butts, Axle Pulleys and Pin Tumbler Locks. This is very handsomely printed on the finest coated paper, and filled with illustrations explaining the text, said illustrations being of the most artistic character imaginable, first-class in every respect. As they state in their prefatory remarks: "The effect of ball bearings in greatly increasing the ease of action and in reducing the wear by practically eliminating the friction, is so universally known that the importance of their introduction into the articles herein described" justifies the publication of so artistic a brochure. The Hardware dealer who does not add this recent booklet on the subject to his library assortment makes a mistake that his customers should hold him accountable for. No dealer should be without it.

CHAIN STAY FENCE Co., Toledo, Ohio. Pamphlet catalogue of 28 pages, having reference to their production of Chain Stay Fencing in a number of varieties, each of which possesses merits pertaining to the style of fence illustrated and described. The fence referred to is constructed of large galvanized steel throughout, which is a peculiarity of this description of fence, as the wire used is larger than is customarily employed in the construction of woven wire fencing in general. The Chain Stay feature possesses the merit of providing perfect elasticity in the fence, so that it cannot be

permanently bent or mashed out of shape. At the same time it enables it to be kept in first-class condition by an equal and independent tensioning of all the horizontal wires. These are unique features that commend the description of fence, which is the principal product of this company. The various styles of fence to which this catalogue is devoted illustrates plainly the manifold differences, making it an admirable one to be distributed in the interests of the trade handling this desirable product. Plain, smooth wire, any size, is counted among the principal products of this company.

CRONK & CARRIER MFG. Co., Elmira, N. Y., successors to the Cronk Hanger Co., have recently issued a pamphlet catalogue of 28 pages of their numerous specialties, well printed on good paper, fully illustrated throughout, and including in its contents all the Hardware specialties with which the name of this firm has been identified for many years. It covers their line of Barn Door Hangers and Rail, Stay Rollers, Sliding Door Latches, Garden Rakes, Fencing Pliers in large variety, together with a full and complete line of Flat and Round Nose Pliers of the usual conventional patterns, including also Cutting Pliers, both side and end cutting. Included in its contents are Burner and Gas Pliers, Cold Chisels, Pruning Shears, of which a large assortment is shown, Hedge Shears, Ice Picks and Chisels, etc., etc. These goods are well known to the trade, and while the assortment is being constantly added to, the distribution increases in like proportion.

A. TREDWAY & SONS HARDWARE Co., Dubuque, Iowa. Spring Circular showing their line of seasonable goods, the contents being full and complete, including Steel Goods of every description, Floral Sets, Scythes and Snaths, Hay Fork and Carriers, Lawn Mowers, Post Hole Diggers, Draining Spades, etc., etc. It is a very desirable addition to their regular catalogue, evidently gotten up to facilitate "rush" orders for goods needed for the general requirements of the Hardware dealer.

## The Ericsson Telephone Co.

The Ericsson Telephone Co., manufacturers and importers of telephones, switchboards and telephone supplies, 296 Broadway, New York, recently received a letter written by direction of the Chief Signal Officer of the War Department, Washington, D. C., having relation to the Ericsson Telephone, in which they take considerable pride. The text of the letter is as follows, particular attention being called to the point that the report upon the Ericsson Telephone has been a favorable one.

ERICSSON TELEPHONE CO.,

296 Broadway, New York.

Dear Sirs:

Referring to the order this day placed with you for 200 bridging telephones, this office desires to state that, as you are probably aware, in the early part of 1900, we shipped a lot of telephones of six different makes to Manila, for test purposes. The report upon the Ericsson Telephone has been favorable. As the telephones covered by the present order are going to Manila, you should understand that it is expected that they will be in every respect of the very highest class of workmanship, in every detail, and it is believed that your company will readily see that it is to your own advantage to turn out the very best instrument possible. The telephones when ready will be subjected to a very careful and thorough inspection.

By direction of the Chief Signal Officer:

Very respectfully,

EUGENE O. FECHET,

Captain and Signal Officer, U. S. V., Disbursing Officer.

"A physician says that people who sleep with their mouths shut live longest."

"Well, people who go around with their mouths shut when they're awake seldom get killed."—*Ex.*

### Death of Elias C. Atkins.

Elias C. Atkins, the founder and head of E. C. Atkins & Co., Indianapolis, Ind., manufacturers of saws, died at his home in that city of heart failure, April 18. He had for three years been failing in health, but up to within a few days of his death, had been able to visit his office occasionally. The month of March he spent in Florida, hoping to regain his health.

Mr. Atkins was born in Bristol, Conn., June 28, 1833, being the youngest of a family of six. His ancestry was English, the family having come to New England in the seventeenth century. He received some education in his native town, and at the age of 12 was apprenticed to the trade of saw making, under his uncle, in Bristol, the firm being Atkins, Allen & Co., established about 1838. In 1855 he established the first saw factory in Cleveland, Ohio; but with the lapse of a year he was convinced that the saw industry could be developed under more favorable conditions in Indiana, and he therefore moved to Indianapolis in 1856.

He began his business career in that city single handed and with little capital in a small corner of a planing mill. A year or two later he moved into the old city foundry, where he was burned out twice, starting again in the location now occupied by the company, covering acres of ground, where from a small beginning the business has grown so that over 700 men are employed, with a weekly pay roll of over \$6,000 and a capitalization of \$600,000, there being branch houses in Memphis, Minneapolis and Atlanta.

Much of the machinery employed in his large plant was the invention of Mr. Atkins, over 100 patents having been granted to him between the years 1880 and 1890.

He was a member of the Commercial, Columbia and Contemporary clubs, the Board of Trade, and Marion Lodge, F. and A. M. Having been deprived of a college education in his youth, he continued his self instruction through life, being a great and discriminating reader and possessing a large and complete private library.

At a meeting of his employees, held on the day of his death in connection with the expression of sympathy to the bereaved family, the following tribute to his memory was adopted:

We, the employees in the shops of E. C. Atkins & Co., having just learned of the death of Elias C. Atkins, for so many years the head of this institution, have come together for the purpose of giving some expression to our feeling of great loss. We well know (most of us from years of experience) that each one of us has lost a sincere personal friend, who was every day proving his personal interest. Although years ago Mr. Atkins had already built up this institution to the point where it would stand as a proud monument to any man, yet at no time was there any detail in the work of the shops in which he lost interest. He was always alert to keep in touch with the work of the shops, quick to appreciate and praise intelligent and faithful service, and daily gave evidence of his affection for the employees in the shops. He was a just man, clear sighted, and self sacrificing, and his life will always be an inspiration to the employees of this institution. With us he needs no other monument than the impression his life leaves upon us.

Mr. Atkins was a man of fine physique, tall, erect and

## Out for Business.

If you're out for business, if you want to get all you can and hold it after you get it, don't waste your energy in pushing poor paint.

It's hard work to sell poor paint—because you have to keep after new customers all the time.

No man who once gets fooled by poor paint wants it again.

## THE SHERWIN-WILLIAMS PAINT

is good paint. It makes a constant customer out of every man who tries it. It does its own advertising. Every sale brings another. When you build up a good trade you are sure to keep it.

S. W. P. is made right—to sell right and wear right.

**THE SHERWIN-WILLIAMS CO.**  
PAINT AND VARNISH MAKERS.

CHICAGO,

dignified. He was of a quiet, undemonstrative temperament, with deep religious convictions, steadfast in his integrity and devotedly attached to his many friends, by whom he will be sincerely mourned. He leaves a widow and six children—one son and five daughters.

American railroads carry in a year the great total of 1,000,000,000 tons of freight. The freight so carried is much diversified and the rates of transportation are cheap, two important items in railway freight service. It is a common belief that the chief freight on American roads is grain, and that the earnings of the various roads are dependent largely upon the harvests of cereals. Indirectly this is true, for large harvests at remunerative prices mean money to farmers for other articles which railroads transport, but, actually, the profits made by railroads from the transportation of grain are less than from several other articles of freight.

The gross revenues of American railroads from freight amounted last year to \$1,000,000,000, or about the rate of \$1 for each ton of freight carried, a remarkably cheap rate. There are about a million and a half freight cars in use on American railroads, carrying from fifteen to twenty-five tons of freight each. The policy of American railroads in recent years has been to increase the carrying capacity of freight cars and to lengthen freight trains and increase their speed.

The Government holds its gold coin in small strong canvas bags. It ships it in the bags inclosed in stout boxes, either by express or by registered mail. A maximum of four pounds may be transmitted by registered mail, and the Government thus transports large aggregate amounts, having recently sent it in this manner to the Philippines. The mints do not send out less than \$500 in a single shipment.

## RECENT TRADE PUBLICATIONS.

**NORTH BROS. MFG. Co., Philadelphia, Pa.** Envelope catalogue with a very handsome embossed cover, bearing the title "Yankee" Tool Book No. 3, evidently intended for distribution by the general trade, being of envelope size, of 24 pages, and filled with the best kind of reading matter for the exploitation of the up-to-date tools made by this well-known concern. It is worthy of a wide distribution.

**GEORGE BURNHAM Co., Worcester, Mass.** Illustrated catalogue and price list of the special styles of machinery manufactured by this company, including Upright Drills for hand and power, Sensitive Drills with one, two, three and four spindles, Clamp Drills and Planer Chucks, all of which are shown in a very intelligent style in this pamphlet catalogue of 36 pages. Full descriptions accompany the cuts, which are exceedingly graphic, and well engraved. Included in the contents are Geared Drills, Track Drills, Drill Presses and a full line of the Jordan Planer Chucks, both round base and square base are described and illustrated.

**L. D. BERGER, 59 N. Second Street, Philadelphia, Pa.** 1901 catalogue of Tinner's and Roofers' Supplies for the sale of which this house is a noted one. This is a pamphlet catalogue of 100 pages, filled complete with every possible appliance necessary for the transaction of the tinner's business as well as a wide assortment of material especially prepared for his use. Included in the contents in connection with the regular requirements are Roof Gutters, Expanding Conductors, Galvanized Pipe of various descriptions, Adjustable Elbows, Cut-Offs, Roof Irons, Gutter Hangers in large variety, Gas Pipe and Plumbing Hooks, Cornices, Metallic Ornaments, Finials, etc., etc. It is a very complete catalogue of the description referred to and indispensable to the dealer handling or requiring materials of this description.

**WILLOUGHBY FORK AND MFG. Co., Willoughby, Ohio.** Illustrated catalogue of heavy Steel Goods, in which they include such goods as Coke Forks, running from 8 to 16 tines, Coal Forks, with an assortment equally as extensive, Stone and Ballast Forks, 14 tines, and Sugar Beet Forks, running from 5 to 7 tines, with either plain points or solid ball points; Potato or Vegetable Scoop Forks, Coal Scoop Forks, Farmers' or Barn Forks, and Cotton Seed as well as Tanners' and Oyster Forks. All come under this particular head of heavy Steel Goods, making a notable assortment of this class of goods, and one that will command attention. This is a pamphlet catalogue of 12 pages only, but devoted exclusively to the line of heavy goods above referred to.

**TRAGLE MFG. Co., LIM., Reading, Pa.** Revised Catalogue and Price List No. 2, specially designed for the jobbing trade, showing the line of Veterinary Files, Rasps and Floats of every description manufactured by this company, who make a specialty of this class of work, which includes all the possible varieties of files and rasps necessarily used in the successful transaction of this business. They also manufacture the Ideal File Card and Brush; also the IXL File Card, a class of goods that is desirable to be informed upon, in addition to the other lines made by this company. W. S. Tragle, who is the sole manager for the sale of these goods, was for a number of years a traveling representative of the Kearney & Foot Co., and is well and favorably known to the Hardware trade through a large section of territory. He gives his entire attention to the sale of these goods.

**ERIE SPECIALTY Co., Erie, Pa.** A very handsome and attractive catalogue issued by them, dated 1901, covering their line of Hardware and Advertising Specialties, of which they make a large variety. In this catalogue the full line of "Quick and Easy" and "Walker" Hardware specialties are given in extensive assortment, including Cork Pullers in a multitude of different styles, covering every possible requirement; Corkscrews, a full line, from the all-steel wire variety to the wood and stag handle styles that are so popular with the trade. Included in the assortment are a number of the Self-Pulling styles that are largely called for by the trade at the present time, and which this company makes special efforts to supply the demand for. The "Quick and Easy" Champagne Taps are fully illustrated and in this volume is shown the advertising novelties which assist in the sale of these special goods. Lemon Squeezers are also shown in large assortment. Included in its contents are such goods as Milk Shakers, Candy Hammers, Soda Water Glasses and Stands, Ice Shaves and Crushers, Tobacco and Cigar Cutters, etc., etc., making it a very desirable catalogue, which should be in every Hardwareman's library.

**ARCADE MFG. Co., Freeport, Ill.,** have recently issued an entirely new 1901 catalogue, covering their line of Hardware specialties of which they have been manufacturers for a long time, the company being established in 1885. It embraces the line of Coffee Mills, which are at the present time well known to the trade covering numerous up-to-date styles and produced in a manner that commands attention, and meets with a ready sale. They also make some of the older styles which are made under the name of the "Favorite" Box and Side Coffee Mills. They also make a line of Cork Pullers and Lemon Squeezers, Ice Picks, Ice Shaves, Lamp and Flower Pot Brackets, Ceiling Hooks, Carpet Stretchers, Cast Iron Hammers, Mincing Knives, etc., etc. The catalogue covers a wide line of specialties that are in request by every Hardware house in the United States, large or small, including so many of the possible stock requirements from Pokers and Stove Lid Lifters to Foot Scrapers and Thumb Latches, and is a most complete one.

**JACKSON KNIFE AND SHEAR Co., Fremont, Ohio.** Illustrated catalogue and price list of an exceedingly attractive line of Ladies' Scissors in great variety, and Pocket Knives of every description. Their line of Pocket Knives, which is a large one, is a "warranted" line, manufactured by this company, and warranted against flaws in blades and springs. This large line embraces all the leading styles of finish, in metal, wood and fancy coverings. It is claimed by the company that in this department expert workmen only are employed under the direct supervision of experienced men. All the blades used in the manufacture of their pocket cutlery are hand forged from the best English steel, carefully hardened and tempered and sharpened ready for use. An idea of the large line manufactured by this well-known company may be obtained from the fact that at present it embraces over 400 styles. The catalogue is printed on good paper with excellent illustrations, descriptions that are easily understood, and the list prices accompanying each particular pattern making it a very desirable catalogue for the trade handling this description of goods.

"Learning the cornet, is he? Who's his teacher?"  
"He has none. He's his own tooter."

## NEW GOODS AND SPECIALTIES.

### Chandler's Ice Cutting Machine.

C. E. Jennings & Co., 101 Reade Street, New York, as is usual at this season of the year, are making a specialty of Chandler's Ice Cutting Machines, for which they have been selling agents for a number of years. This unique machine has held its own for the purpose of preparing cracked ice for all special purposes, especially that of preparing iced drinks and iced tea or coffee; in fact, even for the preparation of

CHANDLER'S ICE CUTTING MACHINE.

the ice for the manufacture of ice cream, it has been found unequalled. Its size makes it suitable for soda counters, family use, hotels, confectioners, hospitals and other institutions where crushed ice is used in quantities for the table or other purposes. It is made in four sizes: No. 1 for bar tops and soda counters, No. 2 for family and universal use, No. 2½ for hotels, hospitals and boarding houses, and No. 3 for large hotels, confectioners, etc., the list prices of the several sizes being: No. 1, \$3.50; No. 2, \$5; No. 2½, \$8; No. 3, \$20. The No. 2½, which is a popular size for special uses, stands 18 inches high, weighs about 25 pounds, and while occupying a space of 8x11 inches only, will take in a piece of ice weighing 12 pounds.

### Ripley's Compressed Air Sprayer.

The Ripley Hardware Co., Grafton, Ill., are the manufacturers of the Compressed Air Sprayer which they are placing on the market through the Hardware and Implement trade, an illustration of which we give in Fig. 1 of this article. It is a very complete Compressed Air Hand Sprayer, among the special advantages claimed for which are: It forces the air in the glass jar (see Fig. 2) and the cap of

FIG. 1.

jar is fitted with an air and discharge tube, so that one stroke of the pump will force the solution out of the jar in the form of a continuous fog mist, in this way saving the lost motion of pump action frequently found in other articles of a similar character. This mechanical action, it is claimed, enables the sprayer to do twice the amount of work that is possible with an appliance founded on similar methods of propulsion. It will spray overhead when required, and will spray until all the solution is used which the jar contains.

It is not necessary to have a special glass jar for the purpose, as any common glass jar will fit it. The sprayers are furnished with tin pumps and zinc caps; also with brass pumps and brass screw caps. The Ripley Hardware Co. make a combination hand sprayer that can be used to apply either solution or powder. They also manufacture a compressed air five-gallon sprayer, which is advertised elsewhere

FIG. 2.

in this issue of *Hardware*. Their sprayers have been highly endorsed by the leading nurserymen and other parties using them in the United States and Canada. Many testimonials in their favor can be furnished by the manufacturers on application. Their sprayers are used for spraying trees, nursery stock, shrubbery, vegetables and tobacco; also for white-washing poultry houses, fences, barns, or for applying lice killer in poultry houses and on stock, as well as for spraying disinfectants, washing windows, buggies, etc. This is a specialty worthy the attention of the trade at this season of the year, and further information regarding their merits will be gladly furnished as stated above.

### Fairy Hose Nozzle.

Landers, Frary & Clark, New Britain, Conn., and 82 Chambers Street, New York, among their numerous specialties having reference to the Spring trade, and in connection with the distribution of their Lawn Sprinklers, are manufacturing

FAIRY HOSE NOZZLE.

the Fairy Hose Nozzle, of which we give an illustration herewith, the cut showing the article full size. It is made of polished brass, very handsome and attractive in appearance; is so constructed that it throws either a small stream or will furnish a wide spray. They are distributed to the trade in boxes containing a half dozen.

### Khotal Wickless Oil Stoves.

The Hydrocarbon Burner Co., 197 Fulton Street, New York, are the manufacturers of the Khotal Wickless Oil Stoves (Blue Flame), which are designed to be used when gas or oil is not available, although it is referred to by the manufacturers to be a satisfactory stove under almost any conditions. Gas being an ideal fuel on account of its heat and convenience, has always been restricted to dwellers in large cities, and even there the expense of using it has de-

tered many housekeepers from using stoves in which this is the active principle. The Khotal Royal Blue is a gas stove pure and simple as far as convenience and efficiency are concerned, but is dependent upon no supply station, since it generates from common gasoline or petroleum a gas equal in heating power to that which comes from the mains. The comparative cheapness of this style of stove makes it available for use at any point in the city or country, as both purchase price and running expense places it within the reach

KHOTAL WICKLESS OIL STOVES.

of every family. The secret lies in the generator, which is fundamentally different from any other process of oil combustion. It has neither a wick nor an asbestos ring, which is practically a wick. It simply converts the oil as rapidly as it is used into a gas which burns with a transparent, almost invisible blue flame, but of intense and concentrated heat. The generator is extremely simple, as may be seen by comparing it with the intricate and complicated mechanism of similar appliances. It is started by the use of a little inflammable spirit, such as wood alcohol, and then continues to generate gas as long as the supply of oil holds out. It is possible to turn it up or down or out the same as you would gas by a motion of the valve, the flame being under perfect control at all times. It is claimed that the full flame has double the power of a gas range and more than double that of any other oil burner, so that for ordinary cooking a much reduced flame is quite sufficient, and yet even at full force, the consumption is calculated at but one gallon of oil for 12 to 16 hours of steady burning. The illustration given herewith is the No. 200 A, with non-detachable standard. It is also furnished in a number of other styles and sizes, full information regarding which will be furnished on application.

#### Duff Drilling Attachment.

The Duff Machine Co., Lowell, Mass., are placing upon the market through the Hardware and Machine Supply trade the Duff Drilling Attachment, which is claimed to be a great labor and time saver. We give an illustration of the article herewith, showing it in operation, and illustrating one of the popular uses to which it is applied. They are made in three styles. Style "A," which we illustrate, is fitted to take the standard half inch round shank drills. Another style "AA" is fitted to take the standard square shank bit-stock drills. Style "B" is fitted with a universal chuck, which enables it to take either round or square shank drills. They also make a socket with a square hole in the end to fit stock drills. These may be used with the "A" style. The manufacturers make a set of five bushings to fit the "A" drillers that will take the following sizes of common straight drills: 3-16,  $\frac{1}{4}$ ,  $\frac{3}{8}$  and 7-16 inch. It is one of the important features in connection with this drilling attachment that these drills can be purchased at any Hardware store for sizes less than  $\frac{1}{2}$  inch at about half the cost of the  $\frac{1}{2}$  inch shank drills. It is referred to by the manufacturers among the advantages, that by the aid of this attachment a hole may be drilled in less time than a workman requires in getting ready to use a

ratchet; and that all the friction to overcome is the work of the drill, as the friction of the driller is reduced to a minimum by ball bearings; that all danger of breaking small

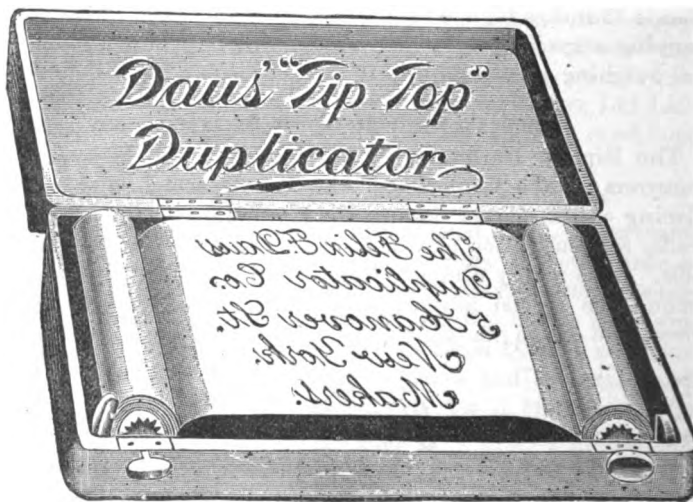

DUFF DRILLING ATTACHMENT.

drills when the point comes through the piece being drilled, is prevented by the screw feet, which is always under perfect control. A  $\frac{3}{4}$  inch hole can be drilled with the Duff Driller with less effort than a  $\frac{1}{4}$  inch hole can be drilled with a breast drill, for with a breast drill the operator has to push against the drill in order to make it cut, but with the Duff Attachment, he does the feeding with the hand screw. It is claimed to be just the tool to be operated with a flexible shaft.

#### Daus' "Tip Top" Duplicator.

Felix F. Daus Duplicator Co., 5 Hanover Street, New York, are the manufacturers of Daus' "Tip Top," which is an up-to-date duplicating apparatus intended for printing from one original 100 sharp copies from the pen, or 60 copies from a type-written original. Copies, it is claimed, duplicated with a new black ink furnished by the company, have all the appearance of an ordinary written letter. This useful article

DAUS' "TIP TOP" DUPLICATOR.

has been before the public for some little time. The regular price for the apparatus complete with a roll containing five yards of printing surface Cap size, costs \$7.50. By reference to an advertisement in our columns, this issue, an offer is made to those interested that the manufacturers are willing to send a complete Duplicator subject to ten days' trial, and will allow a trade discount of 33 1-3 per cent. for prompt payment in five days after receipt of goods. This is worthy the attention of those requiring an appliance of this description for a larger distribution of printed matter than is usually obtained with equal facility.

**"Eagle" Water Still.**

Health and Comfort Supply Mfg. Co., Cincinnati, Ohio, are the manufacturers of the "Eagle" Water Still, an article designed for the self-purifying of water for sanitary purposes by a new process, and which was referred to in our columns at length in a recent issue. Attention is called to their advertisement on page 49. The manufacturers are prepared to furnish an unlimited amount of testimonials which convey complete information as to its great utility for the purpose above specified. They desire to introduce this desirable article through the Hardware trade, and would be pleased to open up correspondence having reference to establishing this connection. The "Eagle" Water Still is 9 inches in diameter and 14 inches high; is made in three parts out

**"EAGLE" WATER STILL.**

of heavy copper, and the inside is lined with pure English block tin. The illustration herewith conveys an idea of its internal construction. The object of making it in three parts is so it may be easily taken apart and cleansed. The company are the manufacturers of a number of other patented novelties for kitchen or household use that deserve the attention of our readers, information regarding which will be promptly furnished upon application.

**"Diamond" Vegetable Scoop Forks.**

Ashtabula Tool Co., Ashtabula, O., are the manufacturers of the "Diamond" Forks, Rakes, Hoes, etc., the trade generally being well acquainted with the trade mark covering this fine line of agricultural implements, which embraces everything needed in a Hardware stock that comes under the head of Steel Goods. Among their special articles, a large trade has been established in the Vegetable Scoop Forks, of which we give an illustration herewith. This desirable article is manufactured from one solid piece of steel of the best quality; is provided with several tines having flattened points, and the scoop shape is deep enough to make the capacity of the fork large without making it an inconvenient article to use. It is provided with iron D handles and strap ferrules, as shown in the illustration. It is claimed that the

**"DIAMOND" VEGETABLE SCOOP FORKS.**

fork is set so that the "hang is just right." It is adapted for the handling of potatoes, beets, onions and other vegetables and corn on the cob. Its construction makes it screen the dirt from vegetables without bruising them, and corn may be handled without sticking into the cobs. It is claimed that even for handling fine manure it is a more advantageous tool than a shovel or an ordinary fork.

**Single Spindle Sensitive Drill.**

D'Amour & Litledale Machine Co., 19 Worth Street, New York, are the manufacturers of a 14-inch Single Spindle Sensitive Column Drill, an illustration of which we give herewith. This machine is designed for drilling  $\frac{1}{2}$  inch holes and less, and is specially adapted for the use of machinists and tool makers requiring a substantial, accurate and convenient tool. It is provided with an independent adjustment of the spindle head, and lower table, which gives it the capacity of a much larger machine. The upper table can be turned out of the way when using the lower table for

**SINGLE SPINDLE SENSITIVE DRILL.**

drilling or centering long work. The spindle is driven by a  $1\frac{1}{2}$  inch flat belt. It has three speeds, and a cut steel rack and pinion feed, and an adjustable stop to gauge the depth of holes. It is entirely relieved of belt strain, and is counter-balanced by a weight inside of frame, which makes it extremely sensitive and uniform to the touch. It is fitted with No. 1 Morse taper, and is also provided with means for taking up wear or lost motion. The machine has the counter-shaft attached to the column, and can be placed directly under the line shaft, thus avoiding the trouble and expense of putting up a counter-shaft. The machine is provided with bell and dead centres, which fit lower table, for centering long work.

**"Queen" Vegetable Slicer.**

E. C. Atkins & Co., Inc., Indianapolis, Ind., are the manufacturers of one of the most desirable articles in the way of a Vegetable Slicer that is at present offered to the Hardware trade. It is marketed under the name of the "Queen" Vegetable Slicer, and we give herewith an illustration showing the complete manner of its construction, and the facility with which

it may be operated. The knife is double edged, cutting both ways, and is referred to as doing better work than any three-knife slicer on the market. The knife may be removed when dull and readily sharpened, and can be adjusted with very little difficulty to cut either thick or thin slices. In its use the vegetables are all evenly sliced with none left in the box, while in the preparation of cabbage for slaw or kraut it slices it perfectly without the necessity of holding the cabbage in the hand. It is calculated to slice all solid vegetables

that may be needed in the work of the kitchen. In comparing this with the ordinary slaw and kraut cutters now on the

QUEEN VEGETABLE SLICER.

market, it should be remembered that by the aid of this machine, all kinds of vegetables are sliced.

#### Queen Washing Machine.

Buckeye Churn Co., Sidney, Ohio, are placing upon the market through the Hardware and House Furnishing goods trade the Queen Washing Machine, a fair representation of which is given in the cut herewith. This washing machine differs from many others of its kind in the construction of the working parts of the machine as well as in the general make-up, the manufacturers deeming it a point of interest to the consumer that it should be constructed from the best material possible in order to add to its lasting qualities. Poplar is used for all parts except the moulding, which is graded Norway pine. This wears smooth and makes it long lasting. The rubber slats that are noticeable in the cut herewith, placed on the semi-circular attachment, are quadrilateral in shape, with their inclines running from the extreme points of the

QUEEN WASHING MACHINE.

rubber circle towards the centre and with a sheet metal lining covering over half the slats. In the tub the slats are of the same shape with their inclines running from the centre of the tub below toward the top. This practical method of construction is adopted in order that when the rubber is in its place, resting on the goods, the inclines may be in opposite directions. Thus by every motion of the lever the goods are moved similarly, reversing and dipping in the manner of filling and pressing a sponge, the sheet metal lining over the rubber slats giving force to the water. It is claimed that these original peculiarities of the Queen Washing Machine have been instrumental in making it achieve its present success, the manufacturers claiming there is less friction than in many other machines of its class on account of the method of taking hold of the goods and not slipping over them. The desire of the manufacturers is to have an agent in every town, and correspondence toward this end will be gladly entertained and meet with prompt response.

#### Miller's Patent Catalogue Case.

Roy Miller, Alma Centre, Wis., is placing before the Hardware trade and other lines of business requiring an article of this description Miller's Patent Catalogue Case, an illustration of which we give herewith. There has always been a demand by the Hardware trade for some convenient receptacle for the literature inseparably connected with the Hardware business in its present advanced state of intelligence. Catalogues innumerable are distributed by the manufacturers, received by the dealers, piled up in any old way that will answer, and eventually "fired" from the want of some convenient place to put them where they may be readily reached and consulted. The article under review presents as attractive a system as one could wish within the reach of every one in the business who desires to preserve this class of literature, and a very important class it is for the successful transaction

MILLER'S PATENT CATALOGUE CASE.

of their business. It was first designed by the inventor for use in the office of the Miller Hardware and Lumber Co., of which he is a member. It is a handsomely made case, containing a number of tilted or slanting shelves provided at their front lower edges with upwardly extending flanges which enable it to retain their contents. These shelves are divided into files or compartments  $2\frac{3}{4} \times 9\frac{1}{2} \times 12$  inches, with removable labels having space  $\frac{1}{2} \times 4$  inches on which to write, stamp or print the class of goods and division of alphabet. It is intended that the catalogues should lie flat in the compartments, and it can readily be seen that whether they are long or short, large or small or otherwise proportioned the lower ends may be kept in a uniform position by the retaining flanges and are always within reach when wanted, while at the same time presenting a neat and tidy appearance. The case which we illustrate is style No. 30, and is marketed at a price of \$10, although several other styles are made having a smaller or larger number of compartments, No. 30 being the best style adapted for general use, and the one size that can always be shipped immediately upon receipt of order.

## REVIEW OF THE MARKETS.

**Wire Nails:** The demand for Wire Nails, which has been an unusually good one throughout the season, continues unabated. Difficulty is still experienced in getting complete specifications on good orders, but the mills are undoubtedly doing their best to supply the brisk demand. Quotations are as follows, f. o. b. Pittsburgh, terms 60 days, or 2 per cent. discount for cash in ten days:

To jobbers in carload lots.....	\$2.30
" less than carload lots.....	2.35
To retailers in carload lots.....	2.40
" less than carload lots.....	2.50

**New York prices** experience no change, the demand continuing in the same ratio as previously noted, the condition of the trade being very satisfactory. Quotations are as follows:

To retailers, carload lots on dock.....	\$2.53
Small lots at store.....	\$2.55 to 2.60

**Cut Nails:** The existing prices were re-affirmed at the meeting of the Cut Nail Manufacturers, held April 25th, to continue during May for domestic trade. The prices for export trade, however, were advanced. Manufacturers' quotations continue as previously quoted, being f. o. b. Pittsburgh, plus the actual freight to point of destination, terms 60 days, or 2 per cent. discount for cash in ten days:

Carload lots .....	\$2.00
To jobbers in less than carload lots.....	2.05
To retailers in less than carload lots.....	2.20

**New York prices** are without change, remaining at the following quotations:

To jobbers in carload lots on dock.....	\$2.15
" less than carload lots on dock.....	2.20
To retailers in less than carload lots on dock.....	2.25
Small lots from store.....	\$2.25 to 2.30

**Barb Wire:** The phenomenal demand for Barb Wire shows but little evidence of change. Every effort is being made by the mills to fill the specifications, but shipments are somewhat delayed, much to the disadvantage of delivery to the consumer, the jobbers being unable to obtain full supplies. Quotations are as follows, f. o. b. Pittsburgh, terms 60 days or 2 per cent. discount for cash in ten days:

To jobbers in carload lots, Painted.....	\$2.60
" Galvanized .....	2.90
" less than carload lots, Painted.....	2.65
" Galvanized .....	2.95
To retailers in carload lots, Painted.....	2.70
" Galvanized .....	3.00
" less than carload lots, Painted.....	2.85
" Galvanized .....	3.10

Ellwood and Baker Wire is 5 cents and Washburn & Moen Glidden 10 cents per 100 pounds higher than the prices above named.

**Plain Wire:** Plain Wire continues in good request with no change in quotations, which remain as previously quoted f. o. b. Pittsburgh, terms 60 days, or 2 per cent. for cash in ten days:

	Base sizes.	Plain.	Galv.
To jobbers in carload lots.....	\$2.25	\$2.25	\$2.65
" less than carload lots.....	2.30	2.30	2.70
To retailers in carload lots.....	2.35	2.35	2.75
" less than carload lots.....	2.45	2.45	2.85

The above prices are for the base numbers, 6 to 9. The other numbers of Plain and Galvanized Wire take the advances indicated in the following table:

Nos.	Plain Fence Wire Advances (Catch Weights).	Galvanized.
6 to 9.....	Base.....	\$0.40 extra.
10 .....	\$0.05 advance over base.....	.40 "
11 .....	.10 " " " ".....	.40 "
12 and 12½ .....	.15 " " " ".....	.40 "
13 .....	.25 " " " ".....	.40 "
14 .....	.25 " " " ".....	.40 "
15 .....	.45 " " " ".....	.75 "
16 .....	.55 " " " ".....	.75 "
17 .....	.70 " " " ".....	1.00 "
18 .....	.85 " " " ".....	1.00 "

For even weight bundles, 50 pounds or over, 5 cents per bundle advance on above.

**Wood Screws:** Under date of May 1st, the American Screw Co. issued their circular reaffirming the discounts on Wood Screws, previously announced by them, which are as follows:

Iron Bright, Flat Head.....	90	per cent.
Iron Bright, Round and Oval Head.....	87½	"
Iron Blued, Flat Head, Add 5 per cent. to net amount of invoice.....	90	"
Iron Blued, Round Head.....	87½	"
Brass, Flat Head.....	87½	"
Brass, Round and Oval Head.....	85	"

**Rivets:** At a recent meeting of the manufacturers of Rivets, an advance in the price of Iron Rivets was agreed upon, the base discount being quoted at 70 per cent. The market may be considered an exceedingly firm one, as the demand is unusually good. The discount applies to the entire line of Iron Rivets.

	Per Cent.
In Bulk.....	70
Tinners', in Bulk or Papers.....	70
Coopers', in Bulk.....	70
Block and Carriage, in Papers of 100.....	70
Hame.....	70
Belt, with Burrs.....	70
Burrs, for Rivets.....	70

**Tire and Sleigh Shoe Bolts:** The American Screw Co., in their circular dated May 1st, quote the following discounts on these goods:

	Discount.
Tire Bolts.....	
Norway Philadelphia.....	82½
Eagle Philadelphia.....	85
Bay State, Plain.....	77½
Bay State, Fluted.....	77½
Sleigh Shoe Bolts.....	85

**Cordage:** The Cordage market remains firm at recent quotations, and the indications are that there will be little if any change in the immediate future. We quote as follows:

	Pounds.	Cents.
Manilla, 7-16 inch and larger.....	10½	
" ½ inch.....	11	
" ¼ inch and 5-16.....	11½	
Sisal, 7-16 inch and larger.....	8	
" ½ inch.....	8½	
" ¼ inch and 5-16 inch.....	9	
Lath Yarn, medium and coarse.....	7½	
Jute Rope, No. 1.....	6½	
No. 2.....	5½	

**Binder Twine:** The market on Binder Twine is without special activity, there being no excessive demand, most of the sales being in moderate quantities. The prices remain as previously quoted, which are as follows for small lots of twine, with a rebate of ¼ cent per pound for carload lots f. o. b. Eastern factory:

	Pounds.	Cents.
White Sisal, 500 feet per pound.....	8c.	
Standard, 500 feet per pound.....	8c.	
Manila, 600 feet per pound.....	9½c.	
Pure Manila, 650 feet per pound.....	10½c.	

**Linseed Oil:** The Dean Linseed Oil Co. quote as follows:

In lots of less than 5 barrels.....	62 cents per gallon.
In lots of 5 barrels or more.....	61 cents per gallon.

The five-barrel price applies only to deliveries of that quantity at one time.

Boiled Linseed Oil, 2 cents per gallon higher than Raw.	
Calcutta Oil, 85 cents per gallon.	

### THE PHILADELPHIA TRADE.

The season is still backward, and although vegetation is forcing its way, still, the air is very cool. This, however, does not seem to have much effect upon trade, as orders are coming in in good number, and the jobbing trade of the city are busy—in some cases, keeping their packers well into the evening.

The **ARCADE** and **KEARNEY & FOOT**  
**FILE WORKS**  
 NOW OWNED AND CONTROLLED  
 BY THE  
**NICHOLSON**  
**FILE**  
**CO.**

These well-known  
 brands will continue to be  
 made at their **respective factories**

All orders  
 and correspondence  
 should be addressed to the  
**MAIN OFFICE**  
 AT  
**PROVIDENCE, R. I., U. S. A.**

There is increasing difficulty in getting goods, and some staples, like door and window screens, poultry netting, shovels, etc., are almost out of the market, while on wire cloth stocks are largely broken, if not exhausted. Factories complain it is impossible to fill orders promptly, and the largest wire interest has issued another circular letter saying they are from four to six weeks behind on their orders, and all orders must take their turn.

All indications point to a very heavy trade immediately upon the advent of warmer weather, and it is gratifying to report that collections are coming in very satisfactorily, showing an apparently prosperous condition of affairs throughout the country.

As might be expected under such conditions, prices are very firm, with talk of higher figures in many lines.

BIDDLE HARDWARE CO.

#### THE PITTSBURGH TRADE.

May opens with business in a very active condition. Manufacturers are still pushed with orders for immediate delivery, so that in some lines jobbing houses find it hard to keep up stocks. This is especially true in regard to fence wire, of which it is hard to get enough to satisfy the urgent demands of retail merchants.

An effort is being made here to start what is known as the Cupples Warehouse plan of business. Two warehouse companies have been organized in different parts of the city, to erect store buildings on railroad sidings. It is intended to offer especially good shipping facilities, also heat, light and elevator power, all to be included in the rental. For carload shipments there is no doubt of its advantage, although the locations are necessarily out of the present business centre.

The weather is fine, the late storms having passed. Belated Spring is working double time to bring vegetation forward, and the temperature is quite up to Summer heat.

LOGAN-GREGG HARDWARE CO.

#### THE CLEVELAND TRADE.

There has been an immense demand for Wire for fencing this season for the reason that farmers generally refused to buy it last year on account of the very high price; country merchants generally advising their customers not to buy it. When the price declined \$1.00 per hundred, it was too late in the season for its use. Dealers bought very light stocks this Spring and the demand has been very large. The mills have not been able to furnish it; farmers have been compelled to wait a month without getting it and now the plowing and seeding season will prevent using much more this season. The lesson that radical advances affect consumption ought to be remembered. The rush in trade will be now modified by

the farmers being busy getting in their crops, laying the foundation for their own and the world's food.

We are loaning England, Germany and Russia our surplus money and can furnish them food, steel and machinery, and shall be able to get along with or without the Islands.

Four months of unequaled prosperity is assured in 1901, and no great calamity seems possible during the balance of the year.

Prosperity has cured the fads, and killed the cranks, and given time to attend to legitimate business, and the people seem to be contented to have it so.

THE LOCKWOOD-TAYLOR HARDWARE CO.

#### THE ST. PAUL TRADE.

When we think of the cold weather which we had a short time ago, and the 90 degrees in the shade which we had on the first of May, we wonder where we will land. It jumped from Winter to Summer, and business has come to us in large amounts. In fact, we are having a great rush of orders, with new stocks going in at many places.

We are equal to all the business we are getting except on barbed wire. The great Trusts are either ignoring our orders or they desire to keep the market bare—whatever their intentions are, they certainly cause us an unusual amount of trouble because we are not kept supplied and our trade are much exercised because we cannot fill their orders. Altogether, business is very good in all lines; the trade are buying liberally.

Prices are firm with a feeling of thankfulness when certain lines are kept within reasonable prices and prompt deliveries.

C. W. HACKETT HARDWARE CO.

#### THE MINNEAPOLIS TRADE.

We are pleased to be able to report that the labor difficulties that seemed were going to give us a great deal of trouble have been adjusted and we think, on the whole, very satisfactory to all concerned. Every one is at work, and plenty of work to do. Weather is fine, exceedingly hot for this time of the year, 88 degrees to 91 degrees in the shade, seeding all completed, ground in excellent condition, and everything looking fine.

Another new Hardware store to be opened here soon; this means a new jobbing concern. One new retailer and a new Heavy Hardware and Iron establishment has been started here this year. This is in evidence of Minneapolis' growth and confidence in the future of this section. We hope there will be business enough for all. We hear of considerable price-cutting in a way, and we fear this will grow more marked when the new stores get opened up for business.

It seems too bad when prospects for business are so good as they are this year.

W. K. MORISON & Co.

### THE GRAPHITE TRADE.

It is always very interesting to read over the trade letters in *Hardware*; it certainly has been pleasant of late to read how satisfactory business seems to be throughout the United States. It is also interesting to us to note that many of the writers, if not all of them are, so to speak, members of the Dixon family, and when they speak of good business, it simply means that they are selling Dixon's products along with their other lines.

We received a letter this week from a gentleman in Connecticut, who writes as follows:

"I enclose \$1.20, for which please send me a 10-lb. pail of Dixon's Graphite Axle Grease. I used this in the western part of Minnesota for a number of years for nearly everything that needed lubricating on the large grain and stock farm I owned, to the exclusion of every other kind, except, perhaps, oil for the engine. I have never found anything to equal it. Send by express or freight, whichever is cheaper, to Winsted, Conn. I have been unable to find it there anywhere. Evidently the dealers do not know a good thing when they see it."

Now of course we sent the 10-lb. pail of Dixon's Axle Grease, but we would have liked it much better if he had bought it through the dealer at Winsted, Conn., which seems to be his trading town.

We hope the gentleman's letter and our remark will carry a moral to our friends, the dealers.

We read an article in *The Age of Steel* last week that touches a sensitive spot in our make-up. Briefly, the article is as follows:

"If you were to go to a bank to have a note of \$500, payable in four months, discounted at 6 per cent., the interest or discount of \$10 would be deducted and you would be given the balance and would not expect any different treatment; therefore, why should you treat the merchant or manufacturer any less fairly? One of the flagrant abuses in the trade today is the taking off of discounts on bills long after the time allowed for discount; the loss that this amounts to would astonish manufacturers and dealers if they were to figure it up. The manufacturer or dealer should insist, the same as the banker, that the terms of the sale should be acceded to; the customers should be shown in unmistakable terms the injury to the seller and their own loss of credit, for, beyond a doubt, their credit is injured far more than they realize by their own acts. By this action on the part of dealers and manufacturers, it is to be hoped that the abuse may be rectified. All abuses are small at first, and only become evils as they are permitted to grow. Let the manufacturers and dealers take a firm stand and the abuse will be ended."

JOSEPH DIXON CRUCIBLE CO.

### American Machinery in Great Britain.

There is hardly a workshop now of any importance in the whole of the United Kingdom which does not use American tools and labor-saving devices. Only recently I went over a large works, the proprietors of which have laid down some £20,000 worth of new machinery. Of this comparatively large amount, two-thirds is American and the balance British. Many other works that I have visited operate in more or less degree American machine tools, and yet the majority of British firms, owing to the amount of business they have on hand, are schooling their minds to the happy delusion that England is not suffering overmuch from this seriously organized and highly successful competition.—THEO. FIELDEN in *London Daily Mail*.

According to the returns for 1900, just issued, there are in France 975,878 cycles and 11,252 motorcycles. In 1899 the total was 838,856. Of the total for 1900, the Department of Seine (Paris) accounts for 212,510 cycles and 3,449 motorcycles.—*Ex.*

### Fashions in Sign-Boards.

Methods of advertising by their means vary. As in pretty nearly everything else, the ways of one generation do not suit another generation.

Rectangular sign-boards, with gilt letters and dark, smalted backgrounds, are not the kind of shop-front advertisements favored by enterprising retailers in these days, writes Charles F. Benjamin in *Printers' Ink*. The letters soon get weather-dimmed, the background rusty and the wooden fabric is likely to crack and split. Such signs do not harmonize with the architectural pretensions of the tall, decorated buildings now in fashion. Their straight lines and square angles, their flat-surfaced Roman lettering, their stereotyped forms of expression, are out of time with current ideas of how the public is to be interested in business announcements. In a strenuous age, a sign-board needs to be graphic in utterance; in an esthetic age, artistic in construction. It must speak out effectively and stand out acceptably.

The introduction of plate-glass show windows struck a hard blow at the oblong, square-cornered sign-board over the door. The big, shiny, transparent show-pane, with its picturesque backing of display goods in the window, is an ideal groundwork for a sign, which needs must differ radically in color, form and arrangement from the old-fashioned board, nailed flat against the frame or brick front of the building. Hence, the white enameled letters that are so pretty and effective, but so tantalizing by their tendency to drop off from contraction and expansion of their glassy support. To overcome this, there are various devices. One mode is to provide a rubber backing to the rim of the hollow letters, making them adhere to the glass by air suction. A surer way is to string the letters on fine, taut wires inside the pane; or, where a curved arrangement is required, to mount the letters in a light, ornamental metal frame work.

The influence of current methods in newspaper advertising is shown in the attention recently paid to what are called alterable, or changeable, signs; meaning a sign in which the letters can be removed and arranged at will, so as to vary the announcements expressed by them. In all these the backgrounds are permanent. One very recent device in this class has the background formed of a layer of cotton batting, over which is an ornamental facing of any soft material. The letters are laid and arranged into words upon this ornamental bed, and pressed and held securely in place by a sheet of glass; the whole being contained within a suitable frame. In other examples the letters are arranged into words by affixing them to a perforated backing, or to a background of wire strings or wire netting; or the letters may be slid into grooves, or between parallel moulding strips.

As a means of attracting attention to the contents of signs,

THIS

machine is adapted to family sewing, simple, easy, light running, durable and of pleasing appearance.

they are frequently made movable by a wind vane, or clockwork, or a small electric motor. In this class, the best known examples are those wherein vibrating disks of bright metal or glass are inserted in the surface of the letters forming the inscription of the sign. An improvement upon this device consists in placing the pendants behind the letters, through which orifices are cut to show the glistening movements of the pendants. A still better example is one wherein the letters are formed of perfectly transparent glass, with opaque interspaces, and behind the letters the whole background moves to and fro; its many colors producing a chameleon effect upon the sign. Less to be commended on the score of appearance is a sign in which the letters are each projected upon a thin, springy wire, causing them to vibrate from the ordinary concussions of ground or atmosphere.

Revolving signs are quite familiar, but less known is the example in that class which travels up and down its pole-

support by a spiral movement, or that other specimen in which the clock or electric motor is made to grind popular tunes out of an attached but concealed musical box. Full of suggestiveness to other lines of business is the mechanical sign wherein an automaton bestrides and operates a bicycle with ease and gracefulness. In one sign of the revolving pattern the letters themselves turn summersaults, cogs, being intermitted on the driving wheel in order to bring all the letters simultaneously to an upright position, at intervals, to enable the inscription to be read.

Transparent or luminous signs have come into extensive use within the past fifteen years. In some, the transparency or luminosity is in the letters; in others, in the background, and in others still, both letters and background are luminous. Of the first named class, one example has letters of transparent glass, each letter backed with luminous paint, and the whole inscription tightly cemented to an appropriate back-

### Benefits Greater Than Ever Before.

Nicholson File Co., Providence, R. I., [Files]: We are pleased to state that the results thus far obtained from our advertisement in the columns of *Hardware* fully justify our having resumed our contract with you. We feel that the benefits which we are securing from your paper are greater than ever before.

### MR. HARDWARE SALESMAN:

Baxter Schenkelberger & Co,

350 Congress street, Boston.

board. Another has opaque letters faced with small crystals of colored glass. In another the bodies of the letters are opaque, but have cut-out portions filled with colored or figured glass. Still another has the letters of transparent glass, the surface of which is prismatic, vastly increasing its reflecting power. The latest example of all has the letters formed of transparent hollow glass, through which a current of colored non-freezing liquid continually circulates, interspersed with frequent air bubbles to heighten the effect.

For luminous backgrounds to opaque letterings, prisms or crystals of glass are generally used, though luminous paint will answer if the sign is framed under glass. A very showy sign is one with transparent letters on a kaleidoscopic backing of broken colored glass arranged in panels.

The early closing movement has not affected the popularity of illuminated signs, since promenaders are attracted to well-dressed, unshuttered windows made bright by electric lights. An effective form of illuminated sign is that in which an electric arc light is made to throw a large colored reflection on the sidewalk or carriage way. In another example, a luminous electric current is maintained within hollow glass letters. A somewhat similar arrangement is one wherein gas jets shine through crystal facings to the letters. Another example has a flash light thrown at regular intervals upon a sign by clockwork mechanism. Mention must not be omitted of perforated letters, showing a sparkling background, lit by a powerful lamp.

Symbolic signs are popular in the illuminated class, as in a pestle and mortar for a pharmacy. By forming the glass in bull's-eyes or prisms, the illuminating power is greatly increased.

Space suffices not to say much of the miscellaneous class of present-day signs. Sheet brass, with etched lettering, is in high favor as a sign-board material just now, and so is a roughened, gilt wood surface, with gilded letters in high relief. For prevailing styles of architecture, there has been devised a light but strong framework of gas-pipe, supporting large gilt or enameled letters, which could not be closely applied to the front of the building. Analogous to this, is an ornamental projecting cornice or moulding from which the

letters are hung. A conception of unusual originality and boldness is the use of strips of ordinary but high-grade silk ribbon, in harmonized or blended colors, to form the letters of a sign, which is framed under glass and carefully cemented to exclude dust, moisture and air. This method, properly worked out, is probably the highest point, in richness of effect, to which the art of sign making has yet been carried. Somewhat akin to it is the exposed florist's sign, in which the letters are perforated to receive a daily setting of dainty flowers or evergreens.

In many cities it is no longer lawful to extend sign-boards across the sidewalk. To meet this difficulty, the ordinarily flat surface of a sign-board has been projected into acute angles, the two faces of each angle being inscribed with the same letter, thus enabling the sign to be seen and read before the store is reached from either direction. This suggests the older device, of projecting slats, bearing inscriptions differing from each other, and from the surface inscription of the sign.

The increased costliness of store signs demands increased protection against injury from the weather. This is largely effected by framing the sign under glass and cementing all the parts whereat air or dampness might otherwise enter. Naturally, with such an expensive frame goes the desire that the contents should be worthy of their cost and surroundings; hence a reaction of one upon the other, leading to a ceaseless advance in the sign-maker's art. Well might the composer of newspaper advertisements, with his restriction to types, electros and black and white illustrations, envy the abundant materials at the command of the fabricator of shop signs, but he may console himself with the reflection that if his field is less varied, it is of infinitely greater extent; for so Nature preserves the balance throughout her innumerable operations and relations.

### Crucibles in Prehistoric Times.

Zimbabwe in Mashonaland, which is in Central South Africa, has ruins which show an almost modern acquaintance with the arts. Hinting at even prehistoric times evidence of abundant supplies of gold are reported—and later abundant gold in Arabia and gold in Phoenecia and Tyre was well known. Recent discoveries point to Zimbabwe, South Africa, as the place of its origin.

Iron smelting furnaces are unearthed, a crude blow pipe was found and also the remains of a bellows; and discovered among other relics was unearthed an ingot mold with patterns of Phoenecian fancy gold ornaments, showing they worked for the Phoenecian market, and what most interests *Graphite* is that crucibles were found there and specimens brought away. The excavators found that the gold was crushed and separated by a water process, then put in clay crucibles well closed up and left for a long time in the furnace. Thus we find a connection between Dixon business and the most ancient times—Bible days—when Tyre was in its wealth and glory, and even back of that, in prehistoric times. Thus a crucible was ever connected with the advance of civilization, and never more so than in the twentieth century, six or eight thousand years after the early prehistoric

workers originated them. To-day the Dixon Crucible is the chosen vessel in which is melted the brass, copper, bronze, aluminum, steel and the precious metals, all of which make modern civilization possible.—J. A. W., in *Graphite*.

### Easy to Adjust.

"Mr. Scrooge," said the bookkeeper, "this past week I did the junior clerk's work as well as my own. This being pay-day, I thought it only right to remind you."

"Very good," said old Scrooge. "Let me see, your salary is \$12 and the clerk's \$6."

"Yes, sir," replied the bookkeeper, beaming expectantly.

"Then, working half the week for yourself is \$6, and the other half for the clerk is \$3. Your salary this week will be \$9."—*Philadelphia Press*.

"Lady," said the beggar, "won't yer gimme a nickel to git some coffee?"

The woman did so, and he started into the neighboring saloon.

"Here!" she cried; "you don't get coffee in there."

"Lady," he replied, "dat's where yer 'way off." Dey keeps it on de bar wid de cloves an' orange peel."—*Philadelphia Record*.

# HARDWARE PRICE BOOKS.

Arranged by R. R. WILLIAMS, Hardware Editor of The Iron Age.

These Price Books are made in a variety of sizes and styles adapted to pocket, store or desk use, and are specially arranged to meet the requirements of the Hardware and Metal trades. They are printed on paper of superior quality and bound in grain seal leather.

Price Book A.

Columns are provided for the name and number or size of goods, for noting from whom purchased, date of quotation or purchase, list and discount, and for entering freight expenses. Under the heading of selling prices, the regular and any special price or remarks in regard to the goods are given place. *Size of page, 4 x 7 inches.*

FOUR EDITIONS:

A, 200 pages, - - \$1.00    A 2, 400 pages, - - \$1.50  
A F, 200 pages with flap, 1.25    A F 2, 400 pages with flap, 1.75

Price Book B.

In this book each page is complete in itself, and the record of prices does not, as in Book A, run across two pages. Thus it accommodates a larger range of goods with much less detail in the record. By the use of familiar abbreviations is sufficiently large for the convenient and concise record of prices. *Page, 4 x 7 inches.*

FOUR EDITIONS:

B, 200 pages, - - \$1.00    B 2, 400 pages, - - \$1.50  
B F, 200 pages with flap, 1.25    B F 2, 400 pages with flap, 1.75

Price Book C.

The headings in Book C run across the top, in a line parallel with the hinge. The details of weight and freight contained in Book A are omitted, and a single column headed "Add" given for the insertion of freight or other expenses. Under the selling prices space is left for the wholesale price, the retail price, and for remarks. *Page, 4 1/2 x 8 inches.*

FOUR EDITIONS:

C, 200 pages, - - \$1.00  
C F, 200 pages with flap, - 1.25  
C 2, 400 pages, - - 1.50  
C F 2, 400 pages with flap, - 1.75

Suitable for desk and store use, and for salesmen on the road. A number of pages at the back of the book are arranged for memoranda. *Page, 5 x 8 inches.*

FOUR EDITIONS:

D, 240 pages, - - \$1.50  
D F, 240 pages with flap, - 2.00  
D 2, 480 pages, - - 2.50  
D F 2, 480 pages with flap, 3.00

Price Book D.

## MULTIPLE INDEX PRICE BOOKS.

A special feature of these books is the index, which is arranged with special reference to the classification of Hardware Goods, each index character giving the first two or three letters of the names of Hardware articles. There is an index character to every page, enabling immediate reference to any of the contents of the book. The ease and convenience with which the books can be used is indicated in the following examples, taken from Book F:

For Augers, turn to AU  
" Parers, Apple " PA

For Chisels, turn to CH  
" Cutlery, " CUT

For Iron, turn to IRO  
" Irons, " IR'S

Both E and F are made of Heavy Ledger Paper and strongly bound in grain seal leather.

Price Book E.

Price Book E—350 pages, 7 1/2 x 10 inches, canvas tab indexing. Price, \$5.00.

### Give You Your Money's Worth

Coldwell Lawn Mower Co.,  
Newburgh, N. Y. [*Lawn Mowers*]: We think HARDWARE is enterprising, pushing, up-to-date, so to speak, and has a certain amount of get-up-and-get spirit about it, combined with a certain flavor of "I give you your money's worth when you advertise with us." that we like it—not for fun or sentiment, but for real business, and so long as you continue thusly you can count on our continuance.

### THE "JACKSON" SCISSORS

The most complete line of steel laid oval pocket, swaged pocket, flat pocket, oval ladies', flat ladies', screw button-hole, ratchet button-hole and tailor point—made in this country. Guaranteed to be as fine any you have ever purchased. If not, return at our expense.

# HARDWARE

Archibald Paull Mitchell, Treasurer of the Hardware Publishing Co., left New York on Saturday last on the Hamburg-American liner *Pennsylvania* for a vacation trip abroad. It is his intention to visit France, Germany and Great Britain, returning about July 15th.

A very brisk demand for Hardware Shelving, Cabinets, etc., manufactured by the J. D. Warren Mfg. Co., Chicago, Ill., continues from abroad; more recent orders being sent from John Kelley & Son, Edinburg, Scotland, and C. W. Burton, Griffiths & Co., Ludgate Hill, London, England.

The Warner Hardware Co., a new venture in the trade at Minneapolis, Minn., are installing a complete outfit of Warren Hardware Shelving, Cabinets and Cases in their store.

The Eveleth Hardware Co., Eveleth, Minn., are supplementing their present store fixtures with a second outfit of the Warren Shelving and Cabinets, for the display of their stock.

W. A. Smith, Lima, Ohio, announces the fact that he has sold his plant for the manufacture of Cut-Offs to the Klauer Mfg. Co., of Dubuque, Iowa, and this product will be added to the line of specialties already manufactured by the company mentioned.

The New York office of the Cleveland Twist Drill Co., represented by Clarence I. Markham, has moved from its old quarters to 62 Reade Street, giving them a location nearer Broadway. They have largely increased their quarters by this move on their part which was made necessary by the constantly growing business. They now have the street floor and two basements each 60x30 feet, giving them ample facilities for the transaction of their business. This old established company, dating back to 1874, are well-known manufacturers of all kinds of drills, reamers, bits, milling cutters, taps, sockets, drill holders, countersinks and similar goods.

In our Bicycle and Sporting Goods Record in the issue of May 10th, we inadvertently classed George H. Stevens, of New Canaan, Conn., as having closed his business. This was a mistake, as he is still occupying the business stand in that town that he has been identified with for the past four years, and states he has no intention of discontinuing the business. We trust that our misleading error has caused him no inconvenience, because that was the farthest from our intentions in making up the Record.

The first patent on record at the Patent Office, Washington, on a Motor Lawn Mower has recently been granted to Thomas and William H. Coldwell, of the Coldwell Lawn Mower Co., Newburgh, N. Y. Many a householder will return his sincere thanks to the inventors for enabling him to sleep a little later in the morning in consequence.

The Arkansas Retail Hardware Dealers' Association correct an error which was in the original programme sent out by J. A. Plummer, the secretary. He makes the following announcement in connection therewith: "On the programme which was recently sent you, there appears an error. Instead of June 12th and 13th, the proper dates for the second annual meeting of the Arkansas Retail Hardware Dealers' Association are June 19 and 20." Our readers will take due notice and govern themselves accordingly.

One of the members of the firm of F. E. Myers & Bro., Ashland, Ohio, whose manufacture of pumps includes Well, Tank, Spray and Wind Mill Pumps, has just received a patent for what is denominated by the combination name of the Upright Bulldozer Power Pump Working Head. This will be manufactured and put on the market by F. E. Myers & Bro., who consider it one of the most important devices in the pump line that has been patented in years. It meets a requirement for a Power Working Head covering a wide range of conditions.

H. Merkel, Broadway and Elm Street, St. Louis, Mo., finds no lessening demand for his great specialty, the "Simplicity" Incandescent Vapor Light, the sales of which continue with unabated success. This fixture is made of highly polished brass with gold-finished ornamentation. This lamp consumes about one pint of gasoline in six to eight hours, and with its improved mantle, produces a soft, steady and very brilliant white light, from 80 to 100 candle power.

Chicago Solar Light Co., the manufacturers of the popular "Nulite" Indoor Arc Illuminator, moved their factory on May 1st to Kenosha, Wis., occupying the plant formerly used by the Sterling Cycle Works. This is a very desirable move on the part of this well-known concern, as the plant is thoroughly equipped with the best automatic machinery and other devices necessary for the proper construction of their goods. This large extension of their productive capacity will make future shipments noticeable for their promptness. On the same day their Chicago office and wareroom were moved to much more commodious quarters at 132-134 Lake Street.

National Sweeper Co., Marion, Ind., have recently distributed a very artistically arranged booklet having reference to their line of sweepers, being printed on excellent paper, in two colors, and with fine half tone illustrations, giving an artistic idea of their assortment of carpet sweepers, which includes the "Marion," "Monarch," "Perpetual" and "Monarch Extra," forming an exceedingly popular line, especially when shown on their display stand, which they present to their customers without expense.

C. E. Jennings & Co., 101 Reade Street, New York, have recently issued for the benefit of the dealers handling their numerous specialties a series of illustrated leaflets, about 25 in number, which describe in a very attractive way the many desirable features of the leading mechanics' tools made by them. No. 1 is devoted to the Extension Hack Saw Frame and Saw Blades. No. 2, under the title "Short and Sharp," gives a description of the Jennings New Short Blade Sharpened Chisel Sets, etc. Book No. 3, title "Narrow and Pointed," now on the press, will speak of Jennings New A 7½ Hand Saw made on new-old lines, six inches wide at butt, 1½ inches at point. Can be used for many purposes where full width saw is unwieldy. A saw that has been worn down by constant use becomes invaluable to the owner. It is their intention to supply these leaflets without cost to the dealers among their customers, and will furnish them in either way desired—with the manufacturer's name on them, or in lieu thereof the imprint of the dealer, the intention being to circulate them by gratuitous distribution through the dealer's efforts.

The Circulation of "Hardware" is Larger Than That of Any Other Paper in the United States Devoted Exclusively to the Hardware Trade.

## Editorial Trade Review.

Business is progressing on the favorable lines recently adverted to as indicating one of the most successful seasons the Hardware trade has known in years. The West especially reports record sales for April in many instances, the principal difficulty being the obtaining of the necessary supplies from the manufacturers with which to fill current orders without unusual delay.

Prices are held with sufficient firmness to make less hesitation noticeable in sending in orders for ordinary requirements. Many manufacturers are full of orders, enough to keep them busy for some time to come in making specified deliveries, so that a slightly lessening demand from the jobbers for current wants is regarded as being a favorable condition of affairs, enabling the catching up on deliveries.

The South has been doing a satisfactory business right along, and while no speculative feeling animated the purchases, the wide assortments ordered by dealers showed a general depletion of regular stocks and indicated a large demand from the consumer, with less anxiety about prices and a certainty of prompter payments than usual on account of the increasing value of the crops marketed. Jobbers' stocks are now broken up considerably, as supplementary orders are slow in being filled, many seasonable articles in quick-selling lines being reported scarce and difficult to obtain. Present indications promise the usual business during May and June, orders already assuming a gratifying frequency and for encouraging quantities.

In the readjustment of prices by the formation of new price lists, several lines are reported as favoring advancing general quotations. The new list prices on Trace

Chains and higher quotations on Coil Chains may be referred to in this connection. The growing tendency toward fluctuation in prices has, however, been a prominent feature in the Heavy Hardware market through several successive seasons.

Manufacturers complain of the difficulty in obtaining a full supply of the raw material needed for orders already in process of being completed. Fewer orders are being booked ahead for future shipment beyond the present requirements, the fear gaining ground that a greater scarcity of supplies in this respect will prove a detrimental feature of the Fall trade, and increasing cost be one of the results.

The labor disturbances arising from the proclivity among some classes of artisans to agitate annually for shorter hours or increased pay, has a tendency to increase the apprehensive feeling that lessened profits on orders already in hand may be the undesirable result. The uncertainties surrounding successful production under "strike" possibilities, have a tendency to stifle the humanitarian impulses which in many progressive factories lessen to-day the laborer's arduous drudgery, but seemingly without converting him to an unselfish admiration of the altruism that makes this condition possible.

The increasing volume of our exports continues to excite the admiration of the student of statistics and gladdens the hearts of the partakers in our industrial activity. There is no limit to the ambition of the successful manufacturer who has already obtained a foothold in foreign countries. The field is so large and so important he frequently exercises too little care in the expansion of this branch of his business. It should require most careful attention when direct representation is desired, as methods of purchasing and pushing sales vary in almost every country with which he wishes to do business.

## A German Opinion on our Manufacturing Development.

The rapid development of the manufacturing industries of the United States and their invasion of foreign markets is the subject of a lengthy discussion by Dr. Carl Ballod, constituting part of a volume recently brought out by the German "*Verein für Socialpolitik*," a copy of which has just reached the Treasury Bureau of Statistics. After commenting upon the rapid growth of the manufacturing industries of the United States in recent years, he says:

"If we put together the figures of exports and imports of the United States, the former figures will show a rising, ascendant column, whereas the latter figures will show stagnation or even decrease. The total commerce of the United States (merchandise only) for the last two decades appears as follows:

Fiscal year	Exports Dollars	Imports Dollars
1880	835,600,000	667,900,000
1885	742,200,000	577,500,000
1890	857,800,000	789,300,000
1895	807,500,000	731,900,000
1896	882,600,000	779,700,000
1897	1,051,000,000	764,700,000
1898	1,231,500,000	616,000,000
1899	1,227,000,000	697,100,000
1900	1,394,500,000	849,900,000

"There can be no doubt that the industrial progress made by the United States during the recent period of economic prosperity has been exceedingly rapid. The United States is rapidly becoming a country devoted to the exportation of industrial products without, however, decreasing the exportation of its agricultural products. Even as late as ten years ago, nobody believed that America within calculable time

would be able to produce iron so cheaply as to enable it to compete with England in the world's markets. To-day this is an accomplished fact. Industrial concentration and technical improvements, particularly in the States of Pennsylvania and Alabama (where to be sure the conditions for a powerful growth of the iron industry were very favorable) have made the American iron industry the leading factor in the world market, with which undoubtedly European competing industry will have to reckon for all time to come. As late as 1889 the imports of machinery and other iron and steel manufactures (\$42,400,000) considerably exceeded the exports which amounted to no more than \$21,100,000; in 1899 the value of iron and steel exported was \$93,700,000, as against \$12,100,000 worth of iron and steel imported.

"Not less rapid has been the development of the cotton textile industry in the United States. In 1880 there were employed in this industry only 11,000,000 spindles and 225,000 mechanical looms; in 1890 the respective numbers were 14,188,000 and 324,000, while in 1900 the number of spindles had reached 21,057,000, and that of the looms 490,000. In 1880 not more than 953 million pounds of raw cotton were consumed in the United States; in 1899, 2,071,200,000 pounds were consumed. The exports of cotton textures has risen from \$4,071,882 in 1875 to \$11,836,591 in 1885, and \$23,566,914 in 1899. Since during this year (1899) the total imports of cotton and cotton textures amounted to only \$37,000,000, of which \$32,000,000 fell to the share of textures, it would seem that American exports of cotton goods would soon balance the imports of those goods.

"It is only in the case of woolen goods and silks that the imports considerably exceed the exports. In these two branches the Americans, it would seem, have not yet succeeded in competing with European producers in the foreign markets, though it must be said that they have succeeded in gaining a more important role in the domestic market. The rapid progress made by the silk industry is best attested by the fact that there were employed in this industry 718,000 spindles in 1890, and not less than 1,426,000 spindles in 1900. Similarly the number of looms has grown within this period from 20,800 to 48,200. It may be safely assumed that the United States is now supplying nearly two-thirds of its total consumption of silks."

### Our Rapid Growth in Exportation of Manufactures.

The rapid growth in the exportation of manufactures from the United States is explained in part by some recent studies of the Treasury Bureau of Statistics regarding the proportion which manufactures form of the imports of the great countries and grand divisions of the world. These calculations show in brief that but about 20 per cent. of the importations of Europe are manufactures; of Oceania, 40 per cent.; of Asia, 47 per cent.; of America exclusive of the United States, 47 per cent., and of Africa, 61 per cent. When it is considered that the grand divisions in which manufactures form the largest per cent. of imports are those in which the commerce of the United States shows the largest relative increase in exports, it is apparent that the growth in exports of manufactures is healthful and promises to be permanent. To Europe, whose imports of manufactures form but about 20 per cent. of the total importations, the exports from the United States increased 57 per cent. from 1893 to 1900; to Asia and Oceania, whose imports of manufactures form from 40 to 47 per cent. of the total importations, our exports increased 291 per cent. during the period named; and to Africa, of whose imports manufactures form 61 per cent., our exports increased 235 per cent. during the period under consideration. It is in all these markets where manufactures form the largest share of the imports that the European nations are struggling to increase their commerce. Africa, South America, Asia and Oceania are the fields of their

greatest activity, and it is in those grand divisions—South America excepted—that the commerce of the United States shows a larger percentage of growth than elsewhere. Naturally the growth in our exports to Europe shows a larger sum in millions of dollars, by reason of the much greater consuming power of that grand division, but a very large proportion of our exports to Europe consists of natural products, chiefly foodstuffs, while manufactures constitute the bulk of our exportations to other parts of the world.

This disposition of the continents, countries and islands situated far from the United States, and possessed of limited facilities for even repairing machinery, to purchase costly and delicately adjusted machinery from the United States may be justly considered a tribute to the skill and faithfulness of the American workman. Such complicated and delicately-adjusted machines as clocks and watches, scientific instruments, sewing machines, typewriters, electrical machinery, shoe machinery, engines and locomotives are purchased with confidence and transported to countries and islands of the sea thousands of miles from the workshops and repair shops in which they were produced to be handled by comparatively unskilled operatives, and with a confidence that they may be relied upon to continuously and permanently perform the duties for which they are intended. The click of the American telegraph instrument, the whirr of its sewing machines, the rattle of its typewriters, and the scream of its locomotives are heard in the interior of Asia, Africa, South America and in the most distant islands of the sea. In the last fiscal year we exported more than \$125,000 worth of typewriting machines to Oceania; nearly \$30,000 worth to Africa; \$50,000 worth to Asia; \$63,000 worth to Mexico; nearly \$50,000 worth to the West Indies, and about \$70,000 worth to South America. American printing presses were sent to Oceania in 1900 to the value of nearly \$60,000; to Asia, nearly \$40,000, and to South America, \$16,000. The exports of American sewing machines in the fiscal year 1900 to the West Indies amounted to \$130,000; to Asia, \$54,000; to Africa, over \$10,000; to Oceania, \$531,000, and to Mexico, Central and South America, over \$800,000.

The following table shows the value of the exports of typewriters, sewing machines and scientific instruments from the United States in each year from 1890 to 1900:

Fiscal Year.	Scientific Instr'm'ts—		
	Typewriters.	Sewing Machines.	Telephone, etc.
	Dollars.	Dollars.	Dollars.
1890	.....	2,793,780	1,429,785
1891	.....	2,883,577	1,575,444
1892	.....	3,133,992	1,388,117
1893	.....	2,476,446	1,345,621
1894	.....	2,347,354	1,534,277
1895	.....	2,260,139	1,912,771
1896	.....	3,189,249	2,522,217
1897	1,453,117	3,340,241	3,054,453
1898	1,902,153	3,136,364	2,770,803
1899	2,449,205	3,264,344	4,399,180
1900	2,697,544	4,541,774	6,435,766

\*Not separately stated prior to 1897.

### One Little Screw.

Advertising is a subtle science, so subtle, in fact, that by most of the people it is regarded as more or less of a game of chance. This is a mistake. There is nothing in the world more certain than advertising if it is properly done. You can make a failure in anything—any line of business—if you do not go about it with a full understanding of its details and careful attention to them. Leave one single, little insignificant screw out of a locomotive, and sooner or later there is going to be a smash-up. Whenever advertising doesn't pay, there is a loose screw or a lost one some place. Too many advertisers do not look beneath the surface.—*Current Advertising.*

Treetop—The most of Hezekiah's college bill is on balls and bats; I don't understand it.

Mrs. T.—What don't you understand?

Treetop—He puts down "balls" at from 10 to 15 cents, while a "bat" seems to cost from \$5 to \$8.—*Harlem Life.*

## LEGAL CORRESPONDENCE.

Conducted by William Marston Seabury, Attorney and Counsellor at Law,  
No. 43 Cedar Street, New York.

Any subscriber to "HARDWARE" is privileged to ask any legal question he pleases in this Department and it will be answered free of charge. Address all communications to Editor "HARDWARE," No. 277 Broadway, New York City.

**QUESTION:** A dealer came to me a few months ago and said he wished me to give a salesman who was a friend of his, credit to the extent of \$500 and that he would guarantee the payment of any goods bought by this salesman to this amount. I knew this dealer was perfectly good, but I knew nothing of the salesman, and as long as the dealer, whom I knew to be good, had guaranteed the payment of the goods, I did not care who the salesman was or whether he was good or not. The salesman called in a few days, and within a short time after that he had taken goods to the extent of \$500. I wrote to the dealer upon whom I relied, and I got no answer. I called on him and he said that the salesman had deceived him, and he would not be responsible for the goods bought. Cannot I enforce the agreement this dealer had with me?

**REPLY:** A contract of guaranty is a contract whereby one person agrees to answer for the debt, default or miscarriage of another, and comes within the statute of frauds, which provides that a contract to answer for the debt, default or miscarriage of another must be in writing. If, however, you could show that the consideration for this promise on the part of the dealer moved directly to him and not to the salesman, this would not be a contract of guaranty within the meaning of the statute of frauds and would not have to be in writing. If this cannot be shown, we are of the opinion that you cannot enforce the guaranty.

**QUESTION:** A owns a piece of property twenty-five feet wide and one hundred feet deep. B owns the adjoining piece of property. For the past twenty years or more, and until a survey was made of the property some time ago, A was under the impression that he has twenty-five feet front of property and B also was of the same opinion, but the survey revealed the fact that B had in his possession one foot of the twenty-five feet, the width of A's property. During all this time when A paid the taxes on his property he also paid the taxes on the one foot of property in question, which really belonged to him, but which was in the possession of B without the knowledge of either. Would you kindly inform me (1) Has B the right to hold this one foot of property, claiming the same by adverse possession? (2) If he has, is there any way in which A can redeem the same? (3) Does the fact that A paid the taxes on this one foot of property during all this time affect B's title by adverse possession, if he has any at all?

**REPLY:** We are of the opinion that B has acquired no title to the property in question by adverse possession. In the facts before us for consideration, it is expressly stated that both A and B were of the opinion that A had 25 feet front of property. It cannot be said, therefore, that B held this property under an adverse claim of right. He was in possession but was entirely ignorant of the fact, as was also A. It is one of the essential elements of a title by adverse possession that the claim to the property be asserted as a matter of right (*Burbank vs. Fay*, 65 N. Y., 57-65), and it is held that "Any possession to be adverse must be accompanied with a claim of right or title; a mere naked possession or intrusion without claim of right will inure to the benefit of the owner." (*Gerard on Titles to Real Estate*, 4th Ed., p. 754.)

The fact that A continued to pay the taxes on the full 25-foot lot affects the case only as it is strong evidence to show that A was not aware of any adverse claim to the property.

**QUESTION:** An agent for a large retail house and who has been buying goods from me for this house for some years, came to me and, while giving me his usual order for one line of goods, said that the house he represented was about to take up a new line of goods and that in addition to his usual order, he wished to order a new line of goods. I was very glad to hear this, and, of course, at once filled his order, which was unusual, for the agent generally made comparatively small purchases from me. After I had filled the order,

shipped the goods and sent my bill to the house, I received a letter from them stating that they had never authorized the agent to make these purchases and refused to pay for them. Kindly inform me whether I can insist upon this sale or not?

**REPLY:** Upon the facts before us, it appears that the regular agent of a certain house ordered an unusually large order of goods and also gave an order for a class of goods which the house had never bought before. So long as this agent acted within the scope of his apparent authority, you had a right to accept his order and, if in reality the principal did not authorize the order of these goods, you are not obliged to lose a good sale upon this account. A principal is responsible for the acts of his agent so long as those acts are committed within the apparent scope of his duty. He holds his agent out to the world as being authorized to act for him, and if the agent exceeds his authority, but if there is nothing to put one on his guard or to indicate that the agent is exceeding his authority, one has a right to presume that the agent has authority to act and the principal must bear the loss, if any there be.

## Plant of the J. Stevens Arms &amp; Tool Co.

J. Stevens Arms and Tool Co., Chicopee Falls, Mass., are pleased to announce the fact that H. M. Pope has moved his special machinery for the manufacture and boring of his high-grade rifle barrels from Hartford, Conn., where it was previously located, to their great plant. It is now being installed in its new quarters, and it is part of the arrangement that Mr. Pope will be permanently located at the latter place. The J. Stevens Arms and Tool Co. refer with pride to the fact that from a force of but 44, which was their entire strength six years ago, they to-day give employment to 700. A large portion of this great increase in their facilities may be dated from the fact that a year ago they acquired the large Overman plant, which was conceded to be one of the finest manufacturing plants in the East, and this addition to their previous premises gave them an additional 220,000 square feet of floor space. At that time they seemed so largely encumbered with extra room that they were perfectly willing to rent a part of it, but to-day through the many departments

of their business they are occupying nearly the entire premises, and are also contemplating an addition to their River plant. We give an illustration herewith that will convey a pretty fair idea of the extensive premises now occupied by this progressive company, and will also convey a permanent impression that the success they have achieved in their several lines has not been accomplished except by the latest improved facilities and no end of hard work. To-day they feel they are in the forefront of successful production amply prepared for an annual increase in their business, of which the extensive production of last year will be found simply a forerunner.

### Eleventh Annual Convention of the Southern Hardware Jobbers' Association.

As previously noted in our columns, the Eleventh Annual Convention of the Southern Hardware Jobbers' Association will be held in Asheville, N. C., on June 4th, 5th, 6th and 7th, 1901. A cordial invitation is extended by the officers and members of the Association to the manufacturers and their representatives throughout the country; and also to the Hardware jobbers regardless of their location or connection with the Association. On account of the many attractions in and around Asheville and the delight with which the gentler sex look forward to the visit to that inviting spot, the officers of the Association are making special efforts to induce the gentlemen attending the Convention to bring their families with them, and it is very gratifying to know that a very large number of ladies will accompany the delegates to the Convention.

We are requested to state that the manufacturers and outside jobbers who attend the Convention are not expected to extend any courtesies or entertainments for the benefit of the members of the Association, nor will the members of the Association go to any extra trouble or expense by reason of the manufacturers and others being in attendance at the meeting. All are invited to the Convention solely for the purpose of promoting more intimate social relations, consequently more friendly feelings. All visitors will be cordially received by the members of the Association and will be welcome to take part in the conferences and deliberations at all sessions except those which are of an executive character. The morning session on the 4th and 5th will be devoted to joint sessions of the jobbers, manufacturers and their representatives, as well as to any visitors who may care to listen or take part in the proceedings. A new departure has been made this year by continuing the Convention through four days instead of three as heretofore. No business sessions will be held in the afternoon or evenings on the 5th, 6th and 7th, which will permit of more entertainments and leisure than has been the case in previous years. A number of timely and interesting subjects to the trade will be taken up for discussion, and the meeting promises to be an unusually interesting one. We are advised by the Secretary-Treasurer that the indications point to a large attendance from the membership and also from the manufacturers and their representatives. As in previous years, a Reception Committee composed of the manufacturers' Southern representatives, has been appointed, consisting of some fifty of the most prominent Southern traveling salesmen representing the manufacturing interests of the country.

The Battery Park Hotel has been selected as official headquarters, and special rates will be granted those in attendance at the meeting. The Passenger Associations of the various railroads have also given the Southern Association reduced rates upon the customary certificate plan reduction. To those who contemplate attending the Convention and who desire any special information both as to hotel and railroad rates, full particulars can be secured by addressing C. B. Carter, Secretary-Treasurer, Knoxville, Tenn.

#### PROGRAMME.

The following programme has been arranged for the Eleventh Annual Convention of the Southern Hardware Jobbers' Association referred to above:

#### TUESDAY, MORNING SESSION, JUNE 4, 1901.

Delegates and visitors will please assemble in the Convention Hall promptly at 10 a. m.

Meeting called to order by the President.

Chorus—"America."

Calling of roll.

Address of welcome by the President.

"Asheville"—Louis M. Bourne, Asheville.

Address of welcome to the manufacturers—Col. B. F. Eshleman, of Stauffer, Eshleman & Co., New Orleans.

Response—W. R. Walkley, of Peck, Stow & Wilcox Co., New York.

#### TUESDAY, JUNE 4, 1901.

Annual address of the President.

Report of Reception Committee.

Informal reception of manufacturers, jobbers and visitors.

(During this reception each person is requested to register in the Association's official Register, at which time the Sergeant-at-Arms will distribute, one to each person, the badges prepared for those in attendance at the Convention.)

#### EXECUTIVE SESSION.

#### TUESDAY AFTERNOON, JUNE 4, 1901.

Reading of minutes of 1900 Convention.

Report of Secretary-Treasurer.

Report of Transportation Committee.

Report of Press Committee.

Report of Grievance Committee.

Report of Manufacturers' Committee.

Report of Membership Committee.

Report of Executive Committee.

Appointment of Special Committees.

Communications.

Miscellaneous business.

#### TUESDAY EVENING.

Convention Hall, 9 to 12 o'clock.

Reception and complimentary dance to delegates and visitors, tendered by E. P. McKissick.

#### WEDNESDAY MORNING SESSION, JUNE 5, 1901.

Joint session of jobbers, manufacturers and their representatives.

"Price Guarantees"—Robert Garland, of Standard Chain Co., Pittsburgh.

"The South Socially and Commercially"—George W. Lee, of Eberhard Mfg. Co., Cleveland.

"Classified Lists vs. Quantity Discounts"—Thos. W. Fritts, of Tom Fritts Hardware Co., Chattanooga.

Impromptu Addresses—Each speaker limited to five minutes.

"The Future of the Trusts"—James P. Kelly, of Kelly Axe Mfg. Co., Alexandria.

"Unity of Action on Prices and Terms"—W. T. Shannon, of American Sheet Steel Co., New York.

"Differentials Between Jobbers and Retailers"—T. W. Gathright, of May & Thomas Hardware Co., Birmingham.

Impromptu Addresses—Each speaker limited to five minutes.

"Combinations"—C. M. Fouche, of Crucible Steel Co. of America.

"Southern Trade and Expansion"—George H. Harper, of Clendenin Bros., Baltimore.

"The Traveling Man—A Welcome Visitor?"—A. P. Duncan, of McLendon, Duncan & Co., Waco; W. H. Kettig, of Milner & Kettig Co., Birmingham.

Impromptu Addresses—Each speaker limited to five minutes.

#### WEDNESDAY AFTERNOON, JUNE 5, 1901.

Carriage drive over the Biltmore Estate. Leave hotel 3 o'clock sharp.

#### WEDNESDAY EVENING.

Convention Hall, 9 to 12 o'clock.

Entertainment by the Reception Committee.

#### EXECUTIVE SESSION.

#### THURSDAY MORNING, JUNE 6, 1901.

Discussion of Committee Reports.

"Policy, Potency and Proficiency of the Southern Hardware Jobbers' Association"—W. M. Crumley, of Beck & Gregg Hardware Co., Atlanta.

"Who Shall Do It, and How Should Traveling Men be Posted as to Prices?"—J. H. Falls, Jr., of J. H. Falls & Co., Nashville.

THURSDAY AFTERNOON, JUNE 6, 1901.

Riverside Park, 3 o'clock.

Clay pigeon tournament for merchandise prizes. Also trolley ride to all points of interest in the city.

EVENING.

Convention Hall, 9 to 12 o'clock.

Smoker. Complimentary to members of the Association and visiting friends. (Arranged especially for the entertainment of the ladies.)

EXECUTIVE SESSION.

Friday morning, June 7, 1901.

"Best Methods of Employing Traveling Men"—Spencer James, of Piedmont Hardware Co., Danville. Robt. F. Bell, of R. E. Bell Hardware Co., Weatherford.

General discussion.

"How Can We Make Staples Bear Their Proportion of the Expense of Doing Business?"—Jas. J. Mandlebaum, of Fones Bros. Hardware Co., Little Rock.

General discussion.

Miscellaneous business.

Reports of Special Committees.

Election of officers.

Selection of place for next annual convention.

Adjournment.

FRIDAY AFTERNOON AND EVENING.

Entertainment features to be announced.

In the layout of the above programme, it will be noticed that a great deal of attention has been given to the entertainment of those who will attend the convention, the various social features being prepared with a view of sustaining the interest throughout the entire proceedings. As is customary, a Reception Committee composed of upwards of 50 leading Hardware manufacturers and their traveling representatives was appointed, who have evidently had a hand in making this ample preparation which will result in an extremely sociable and characteristic good time generally.

### Southern Hardware Jobbers' Association.

The following important announcement has been issued to the delegates and visitors from the office of Secretary-Treasurer C. B. Carter, Knoxville, Tenn., having reference to the Convention of the Southern Hardware Jobbers' Association, that will be held at Asheville, N. C., on June 4, 5, 6 and 7:

Knoxville, Tenn., May 15, 1901.

Dear Sir:

To those who contemplate attending our annual Convention, we respectfully ask your careful attention to the following instructions:

The various Passenger Associations have granted a rate of one fare and a third for round trip, i. e., full fare going and one-third fare returning—called the Certificate Plan Reduction, to those who attend our annual Convention from all points in New York, Pennsylvania, New Jersey, Delaware, Ohio, Indiana, Michigan, the southeastern part of Illinois (including Chicago), and all points south of the Ohio River and east of the Mississippi River (including New Orleans and St. Louis). However, to enable you to obtain this rate, certain steps must be taken, which briefly are as follows:

When purchasing your ticket from initial point to Asheville, at the same time you ask for a regular one-way ticket, for which you pay the regular tariff rate, instruct the ticket agent to give you a Certificate, which is practically a receipt for your money. You will please turn this certificate over to the undersigned at the first opportunity upon your arrival, in order that it may be properly endorsed, when it will be returned to you. By presenting this certificate to the ticket agent at Asheville, he will give you a return ticket to the point from which you started at one-third regular fare, but under no consideration will reduction be allowed unless you have a certificate and it be properly endorsed.

If you are outside the above mentioned territory, or if your local ticket agent cannot supply you with a certificate, then you will have to purchase a round trip Summer Excursion ticket, which will cost you a little more than one and one-third fare. If you purchase a ticket on this Certificate plan,

the same can only be secured on and after May 31, and the return ticket must be purchased at Asheville not later than June 11th. However, if you wish to go earlier than May 31st, or desire to remain longer than the 11th, we would advise your purchasing a regular Summer Excursion round trip ticket.

If you will call upon your local passenger agent a few days before you leave for Asheville he will fully explain the matter to you. Yours very truly,

SOUTHERN HARDWARE JOBBERS' ASSOCIATION,  
By C. B. CARTER, Sec'y-Treas.

### The Firecracker Industry.

Until a few years ago every firecracker bought in this country was imported from China. The odd gold lettered labels were not fakes. They were the real Celestial thing. The Chinese firecracker was imported into the United States for the simple reason that the ingenious Yankee had not been able to manufacture it more cheaply than he could purchase it in the Orient, even after paying the 100 per cent. duty thereon. Three years ago, however, the inventive brain of a New Yorker produced a machine which could make the small firecracker cheaply, and now the Chinaman is pushed out of the pop-cracker market. The contrast between the methods of manufacture used by the Chinese and by the Yankee is both interesting and instructive.

The Chinese firecracker is manufactured by what in this part of the world we would call the sweatshop system. A whole city, men, women and children, are occupied in making the article, and one and all turn their product into the hands of the man at the head of the Hong. The Chinese cracker is made out of a shell, a few grains of powder, a fuse, and some clay. The shell is made from rice paper of the coarser sort. Each cracker is patiently rolled on a little tapered stick as a core, taking about fifty turns of the paper to each shell. Children are given this work to do. Then the shells are assembled into large bundles of about 100, set side to side, and the whole bunch held together by a string. Fine powdered clay is put at the bottom of each shell, moistened with saliva, and then packed down. The fuse, which has been carefully rolled by hand is then placed inside the unfinished cracker, after which the powder is sprinkled carelessly over the top. Some more clay packed on the top of the powder finishes the work.

The Chinese firecracker maker earns 3 cents a day. The crackers as they come to the United States are in boxes of forty packs, each pack containing sixty-four crackers. The about forty packs, each pack containing sixty-four crackers. The price of the box in China is 35 cents, which represents the wages of about twelve people, plus some profit. Each workman, then, makes about 200 crackers a day.

By the machinery in use in the advanced factories in the United States two people can make about 4,000 crackers a day. For rolling the shells there is a rapidly revolving mandrel, upon which is fed the rice paper, cut to the exact size. These shells are stiffened by starch. The fuse is made on a machine which feeds fine tissue paper and powdered gunpowder in a hopper and brings it out on a drying rack, as fuse, cut into lengths. The shells made by the machine are arranged in rows and the pieces of fuse are automatically put in them. Then the shells are filled with powder by accurately gauged little scoops, after which the end is crimped, and the manufactured cracker is finished.

The cannon-cracker, owing to the opposition to it by city councils, has had a hard time. There are now laws against all kinds of so-called "cannon-crackers" in nearly every State. The cannon-crackers were made with chlorate of potash and sulphur, and sometimes with dynamite. It was not necessary to have so thick a paper shell, to make the noise, so the manufacture of that kind of cracker was rather cheap, and the Yankees could compete on the larger styles with the cheap labor of the Chinese. By the law against such crackers the Chinaman had the field again for his product for some time, but now Yankees have beaten him out again with their machinery.—*Exchange*.

## CONSULAR COMMERCIAL COMMENTS.

### GERMAN PLOWS IN PORTO RICO.

Consul Warner, of Leipzig, April 11, 1901, calls attention to the fact that Germany has been exporting plows to Porto Rico during the past year, and suggests that proper steps be taken by United States manufacturers of agricultural and farming implements to bring their superior products to the attention of the people of that island.

### LIEGE TRADE WITH THE UNITED STATES.

Trade between this consular district and the United States is undergoing important changes, generally to the advantage of the latter. The consumption of American-made goods here is several times as great as it was three years ago. It is a very common thing to see in a Liege shop window a show card bearing the word "Americaine." In some cases, however, the articles are imitations. Goods manufactured in the United States meet with a much more ready sale than formerly, and usually at a considerable advance in price, since their great superiority has come to be so generally recognized.

The change in the variety and quantity of goods shipped to the United States is also very marked. It is interesting to note that more than one-third of the firearms imported by the United States from this district are in the shape of gun-barrel tubes, rough bored and forged. Prior to the 1897 tariff law and for a year thereafter, a shipment of gun barrels was a rare occurrence, and when one was made it was of high-grade Damask barrels.

During January, 1900, there were shipped to the United States 18,664 gun-barrel tubes, valued at 83,521.13 francs (\$16,118.59), and for February, 18,519 tubes, at 85,163.34 francs (\$16,436.52), against for January of this year 24,391 tubes at a value of 103,055.96 francs (\$19,889.80) and for February, 27,171 tubes at 112,055.37 francs (\$21,626.69). It will be noted that a year ago the average price for a gun-barrel tube was 86 cents, while this year the average is 80 cents, and the quality of the goods shipped is said to be better.

Had the 37,183 gun-barrel tubes exported during January and February of last year been made into guns and shipped to the United States, as they were prior to 1898, they would have represented a value of at least \$111,549, instead of \$32,555.11, and those for the same time this year, \$154,686, instead of \$41,516.49.

Guns that were shipped to the United States prior to 1897 at from 30 to 33 francs (\$5.79 to \$6.37) are now sold at from 23.50 to 25.40 francs (\$4.54 to \$4.90), and in most cases the quality of the guns is far superior to what it formerly was. About four-fifths of the guns exported to the United States from here are machine made. The parts are interchangeable and are far superior to the hand-made articles sold at the same price. Nearly all the machinery used in the manufacture of these guns is imported from the United States.

Another feature of the gun trade of particular interest is its centralization. At present, 75 per cent. of the guns sent to the United States are shipped by four firms, whereas formerly there were twenty about equally represented.

ALFRED A. WINSLOW, Consul.

LIEGE, March 27, 1901.

### GERMAN ENTERPRISE IN CENTRAL AMERICA.

The Department has received the following translation from the *Berlin South American Outlook*, forwarded by Vice-Consul-General Murphy, of Frankfort, under date of April 6, 1901:

German trade continues to develop rapidly in Central America. Fully \$60,000,000 of German capital is invested in Central American enterprises, and German plantations occupy an area of 740,000 acres. Large German business houses in Nicaragua, Guatemala and Costa Rica control, in addition to the entire traffic between Germany and Central America, almost the entire foreign trade of the five republics with England and California. The shipping trade along the Central American coasts is to a large extent in German hands.

### EDUCATION OF GERMAN CHILDREN IN FOREIGN COUNTRIES.

Consul Hill, of Amsterdam, March 19, 1901, reports that, in a recent German appropriation bill, provision has been made for subventions for 125 schools for the German education of German children in foreign countries. For a school at Constantinople, \$7,140 is allowed; for three schools at Buenos Ayres, \$4,284; for one at Galatz, \$2,665; and \$2,380 for a high burghal school and \$238 for a deacon school at Antwerp. A high school for girls at Brussels also receives \$2,380. Four schools at Bucharest together receive \$2,380. A school at Pretoria is granted \$1,428 and one at Johannesburg, \$2,522.80. There are 29 German schools in Brazil, 12 in China, 12 in the British colonies, 12 in Roumania, 11 in Egypt, etc.

### CEMENT FOR SOUTH AFRICA.

Consul-General Guenther writes from Frankfort, April 15, 1901:

According to official reports, South Africa is a good market for cement. All public buildings, stores and dwellings are coated with cement. There are very few wooden buildings erected. The masons in South Africa are mostly Malays. They are skilled in their trade and do the work very neatly. Cement is also largely used in the construction of aqueducts, wharves, chimneys, walls, etc. While the principal import of cement is from Great Britain, considerable quantities are also imported from Belgium and Germany, the latter on account of its cheapness, increasing. Belgium cement is of good quality and as cheap as the English article. The reports state that American cement could compete well, as transportation from our country is not higher than from Europe. Cement can not be manufactured in South Africa, for lack of raw material.

### TRADE OPENINGS IN BRAZIL.

Consul Girimondi, of Santos, March 13, 1901, says that cash registers and adding machines are practically unknown in that section of Brazil and should meet with a ready sale, if properly introduced by agents speaking the language of the country. The consul also believes there is a good opening for photographic apparatus and supplies, and suggests the introduction of up-to-date postal scales to replace the crude articles in use at the present times. Even Government offices, he thinks, might be persuaded to adopt a novelty in this line. Railway companies should also be approached.

### BUSINESS FIRMS IN SWITZERLAND.

Consul Morgan writes from Aarau, April 10, 1901:

Nearly every mail which comes to this office brings letters from American manufacturers and exporters asking for names and addresses of firms doing business in Switzerland, presumably for the purpose of sending out circulars, etc. While this office is always willing to comply with the request,

it often happens that the firms doing business in the particular line requested are so numerous that it is only possible to give a relatively small number of names. I would suggest that those desiring the information as above set forth should purchase the *Registre du Commerce*, which is published annually and contains the name and address of every business house in Switzerland, and is so arranged in one part of the volume that the different lines of business are grouped under separate headings for ready reference. The cost of the *Registre* is \$2 and it can be obtained from any bookseller in Switzerland.

#### LEAD PENCILS IN GERMANY.

Under date of March 15, 1901, Consul Hughes, of Coburg, writes:

The lead-pencil industry in Germany is at present suffering from American competition. It is alleged that our success in this branch of industry is mostly due to the perfection of the machinery. Another important point is the fact that we have the best cedar wood, which is particularly suitable for the manufacture of lead pencils; while the Germans are compelled to import it and can not get it in such good quality. Numerous trials have been made to find another material which could take the place of wood in the manufacture of lead pencils; metal tubes, coverings made from rolled, compressed paper, etc., have been used, but none has met with success.

#### New Edition of a Useful Book.

The Tinsmith's Helper and Pattern Book, with Useful Rules, Diagrams and Tables, by H. K. Vosburgh.

David Williams Co., 232-238 William Street, New York, have recently published a revised edition of this extremely useful volume written by Mr. Vosburgh, the first edition of which appeared in 1879, and has since had a continual and increasing sale. The author knew from experience the needs of the practical tinner, and prepared a book in which a number of simple patterns were described in the plainest way. These occupy the first 66 pages, and contemplate such work as is likely to come up every day in the tin shop in ordinarily simple work. In preparing the new edition, the cuts have been re-engraved, and the appendix, which is an important part of the volume in question, has been thoroughly revised, bringing the tables therein given up to date, and introducing a number of new ones that have undergone changes since the first edition of the book appeared.

Among the many useful tables incorporated in this portion of the book, which is of a size convenient for carrying in the pocket, may be mentioned the following:

Tables giving the weight of black sheet iron, sheet lead and galvanized iron sheets, with their dimensions; the weight of lead pipe per foot, the weights of tin plates and sheet copper. Several pages are devoted to tables giving the circumference and area of circles, the capacity of cans of different dimensions 1 inch deep and the rule for finding the capacity of cisterns. The last few pages of the book are devoted to a series of practical recipes, including mixtures for solders of different kinds, soldering fluxes and various cements.

#### The Only Time.

The only time when I would cut off my advertising would be when I had more business than I could possibly attend to, and when I made up my mind that I would not increase my facilities. If I were making all the money that I wanted to make, if my business had reached a proportion which completely satisfied my ambition, I would stop advertising. Even then I would not stop for very long, because if I did, the business would start on the down grade. You have to advertise to make business and to hold it and to increase it.—*Shoe and Leather Facts.*

#### President Fayette R. Plumb.

Fayette R. Plumb was elected president of the Manufacturers' Club of Philadelphia, at the annual meeting, May 20. There was no contest, and seventy-six ballots were cast for him. John Birkinbine, Cyrus Borgner and John Gordon Gray were elected vice-presidents. For directors for the seven places on the board, the following were chosen: William Milnes, J. A. Adamson, Benjamin I. Wagner, James G. Ramsdell, Peter T. Hallahan, William S. P. Shields and Benjamin H. Gaskill.

Fayette R. Plumb, the newly-elected president, was born in Gowanda, Erie County, N. Y., May 2, 1848.

Leaving the school of his native place, Mr. Plumb entered the academy at Fredonia, N. Y., and after studying at Trenton, N. J., finished a thorough academic course at Williston Seminary, East Hampton, Mass., in the Class of 1867.

FAYETTE R. PLUMB.

Immediately upon leaving school Mr. Plumb took up his residence in Philadelphia and entered the employ of the house now known as the Supplee Hardware Co., the firm name then being Lloyd, Supplee & Walton. In 1869 Mr. Plumb entered into copartnership with Jonathan Yerkes under the firm name of Yerkes & Plumb. Mr. Plumb secured entire control in 1886.

Mr. Plumb is a prominent factor in many organizations. He is a member and a former president of the Hardware Merchants' and Manufacturers' Association; the National Association of Manufacturers; a member of the Union League of Philadelphia, and was a director for four years and for two years vice-president. He is also prominently associated with the Trades' League, the Philadelphia Bourse and the Philadelphia Board of Trade. He was also a member of the Executive Committee of the Tennessee Centennial Commission of the city of Philadelphia.

#### American Smokeless Powder Abroad.

Some results of trials with the new American smokeless powder are given in *La Revue Technique*. It seems, from the report contained in that technical review, that experiments were made with two kinds of powder, one for the army, containing not more than 25 per cent. of nitro-glycerine, and the other for the navy, in which nitro-cellulose alone is used. The reason of the difference is that erosion in guns, largely attributable to nitro-glycerine, is far more marked in big weapons than in field artillery. With the latter powder an initial velocity of about 2,850 foot-seconds was realized in a 12-inch gun and upward of 3,000 foot-seconds in smaller pieces, and this without a gas pressure exceeding seventeen tons per square inch and with projectiles of the ordinary weight. The important point is that these results appear to have been attained with a greatly diminished erosive effect. It is told that a 4-inch gun fired 661 rounds and a 5-inch gun 696 rounds without the least deterioration of the barrel.

## THE PAN AMERICAN EXPOSITION, 1901.

### THE FORMAL OPENING OF THE PAN AMERICAN EXPOSITION.

Buffalo had a raw, dark day for the formal opening of the Pan American Exposition. The clouds that shut out the early sunlight hung ominously overhead all day, with only an occasional rift showing a patch of blue. This was Buffalo's greatest day, and fitting preparations had been made for its celebration. All sorts of buildings all over the city had been decorated with flags and streamers, and along the route of the parade there was a profusion of bunting of varied color and significance.

There were two parades, the first representing the serious side of the Exposition, and the second composed of the concessionaries of the Midway. Detachments of United States troops and the National Guard of New York, with a Mexican military band and a company of Rurales gave the spectacular element to the first. Indians of many tribes, bull fighters, cowboys, Japanese with rikshas and all sorts of fantastic floats, even to the perambulating advertisement of the peanut and popcorn man, showed the circus characteristics of the second.

Both parades formed near the City Hall at about 10 o'clock. By that time the streets along the roped-in parade grounds were jammed with sight-seers in the fashion familiar to New Yorkers. The distinguished visitors to the Exposition and the official guests were ranged in carriages for the ride to the grounds.

Representatives of foreign governments and the directors of the Louisiana Purchase Exposition, to be held in St. Louis, filled more than two scores of carriages. Senator Lodge and Senator Hanna were placed near the head of the column. Lieutenant-Governor Woodruff was attended by the Governor's military staff, gorgeous in plumes and gilt braid. When the soldiers were all in place Vice-President Roosevelt drove up in an open carriage with John G. Milburn, the President of the Exposition company.

It was 12 minutes past 10 when the column began to move. As the soldiers marched in review past the Vice-President he stood up in his carriage to acknowledge their salutes, and it was noticeable that he was the only man who uncovered as the colors went by. It took nearly two hours for the parade to reach the Exposition grounds. All along the route the interest of the crowd was centered on the Vice-President. Not even the novelty in military parades contributed by the presence of the Mexican contingent served to deflect the noise and attention of the crowds from him.

As the head of the column got well under way, a prolonged salute of aerial bombs was fired, as if in defiance of the clouds that seemed unable to withstand such a bombardment. But the rain held off and the column got to the Triumphal Causeway almost exactly on schedule time, 12 o'clock. There the official guests and foreign representatives left their carriages and marched between double lines of soldiers into the Esplanade, where they halted while hundreds of homing pigeons were liberated, each bearing a message to his owner that the dedication ceremonies of the Pan American Exposition had had their formal beginning. The pigeons rose in wheeling flocks and filled the air with the noise of flapping wings. Gradually they circled about and caught their bearings and settled into their homeward flight, and in five minutes hardly a bird remained in sight.

Meantime the distinguished party had passed on into the Temple of Music, where the ceremonies were to be held. It was nearly 1 o'clock when, after the playing by the Seventy-

first Regiment Band, President Milburn announced that Bishop Charles H. Fowler of the Methodist Church, would deliver the opening prayer. After that President Milburn read the telegrams received from President McKinley and the Presidents of several other American States, showing the sympathy and interest they have in the success of the Exposition.

President Romana of Peru telegraphed:

"We who are not allowed the happiness of being present, send our hearty greetings, cordially wishing that the great Pan American Exposition may satisfy all expectations and that it will not only be a splendid show of the power and natural resources of two continents and of the ripe and abundant fruits of the work, brains and energy of a new people, but also that it shall be the glorious center whence noble ideas of right, justice, brotherly love and true liberty will be sent broadcast over the earth, to rule the conscience of all nations."

President Guestas of Uruguay expressed the hope that the Exposition might be a means toward the development of commerce between the countries of the Americas and a tie of union and harmony between them all.

President Aceval of Paraguay also telegraphed his hope that the Exposition would prove to be a "new tie of American unity."

President Roca of the Argentine Republic cabled in a similar strain, saying: "I know it will contribute by its beneficial influence to the prosperity of both continents, and that it will be another tie of solidarity among the nations of America."

Telegrams were also received from the Governor-General of Canada, President Marroquin of Colombia, the Governor of Jamaica, President Simon Sam of Hayti, President Jimenez of the Dominican Republic, President Alfaro of Ecuador and President Telaya of Nicaragua.

After a brief address of welcome by Mayor Diehl of Buffalo, Robert Cameron Rodgers read what Vice-President Roosevelt subsequently called a "vigorous, thoughtful" poem. Then, after the singing of Sturm's "Salve Libertos" by the Buffalo Orpheus, Mr. Milburn rose and said simply: "The Vice-President of the United States." Instantly there was a tumult of applause which filled the arched dome with its sound. Three times it died away and as often surged up again. When at last there was quiet and the Vice-President was able to proceed, he delivered a speech that held the closest attention of his cosmopolitan audience from first to last. When he said "I believe with all my heart in the Monroe Doctrine," there was a wild burst of applause and nods of confirmation and approval. Little outbreaks of cheering followed every sentence that bore thus intimately on the relations and interdependencies of the nations of the Western Hemisphere.

At the conclusion of the Vice-President's address, Senator Henry Cabot Lodge followed with an interesting address having special reference to the maintenance of the Monroe Doctrine.

Then followed a poem by Frederick Almy, after which Lieutenant-Governor Woodruff made the closing address. He spoke for New York State, extending in its name a welcome to the participants in its Exposition.

It is fair to say that there was a great crowd inside the Exposition grounds and yet the grounds were not crowded. All Buffalo and many of the neighboring towns made it a

holiday. Most of the business houses closed up and gave their employees tickets to the show. All the railroads centering in Buffalo ran special trains and many thousands of out-of-town people passed through the gates. The managers had set their maximum mark at 200,000 for the attendance of the day, but early in the afternoon the enthusiasts were talking of another 50,000. What it really was probably will not be known, and matters little. The great fact is that the Exposition now is formally open and it is worth going to see. The work of the architects and other artists is all in harmony and presents a perfect and symmetrical whole. The work of exposition making is practically finished; an unusual progress has been achieved in the last two weeks. The installation of exhibits yet lacks much of completion, and this month will not see it in its finished state, but it is moving steadily on and each day marks a visible advancement.—*New York Sun*.

### Special Days at Pan American Exposition.

The following special days at the Pan American Exposition have been definitely fixed:

- May 1.—Opening Day.
- May 20.—Dedication Day.
- June 6.—Hotel Men's Day.
- June 12.—Coal Men's Day.
- June 13.—President's Day.
- June 14.—Flag Day. Daughters of American Revolution Day.
- June 18.—Wells College Day.
- June 19.—A. O. U. W. Day.
- June 20.—Connecticut Day.
- June 1.—Rochester Day.
- June 24-29.—Saengerfest Days.
- June 26.—Odd Fellows' Day.
- June 27.—Odd Fellows' Day.
- June 27.—Volks Fest (evening).
- June 28.—Cincinnati Day.
- June 29.—Philadelphia Day.
- July 2.—Wellesley College Day.
- July 5.—Liederkrantz Day.
- July 10.—Maryland Day.
- July 11.—Commercial Travelers' Day.
- July 16.—Chautauqua Day.
- July 18.—Ohio Day.
- July 23.—C. M. B. A. Day.
- July 24.—Knights of Columbus Day. Utah Day.
- July 25.—Scandinavian Day. Porto Rico Day.
- Aug. 1.—Mystic Shriners' Day.
- Aug. 10.—Missouri Day.
- Aug. 14.—Virginia Day.
- Aug. 15.—Red Men's Day.
- Aug. 21.—Louisiana Day.
- Aug. 21.—Electrical Day.
- Aug. 26.—Municipal Day.
- Sept. 3.—District of Columbia Day.
- Sept. 6.—National Association of Stationary Engineers.
- Sept. 9.—Spanish-American War Veterans' Day.
- Sept. 10.—Rhode Island Day.
- Sept. 12.—Polish Day.
- Sept. 16.—Mexican Day.
- Sept. 17.—G. A. R. Day.
- Sept. 19.—Welsh Day.
- Sept. 20.—St. Catharine's Day.
- Sept. 25.—Oregon Day.
- Oct. 8.—Brooklyn Day.
- Oct. 9.—New York Federation of Women's Clubs.
- Oct. 10.—National Grange Day.

"Well, Jimmie, do you want gran'pa, and pa and ma, and Aunt Carrie to take you to the circus?"

"No, pa; I'd rather go 'th Tommy Dobbs."—*Ex.*

### Commercial Education.

Not long ago the *Commercial* called attention to the growing necessity of a commercial education for the boys and the young men who must conduct the expanded and the expanding business of this country in the next generation. The old order is changing, changing rapidly, and yielding place to the new. The "business college," as it has been understood in the United States during the past forty or fifty years, will still continue to be an important factor in turning out clerks and accountants who are proficient in penmanship, arithmetic, bookkeeping, correspondence, banking details, shorthand and typewriting, but the commercial college must graduate business thinkers—not merely counting-room workers.

Boys must be bred to business. They must at the outset be able to speak fluently and to write correctly not only the English language, but the French, German, Spanish and Italian; and back of these there must be a groundwork of Latin at least—perhaps Greek as well—in order that they may be fully equipped for the fierce international competition that is bound to mark the trade of the next twenty-five or fifty years, and in which a knowledge of the modern languages will be a prime essential. History, algebra, geometry, commercial arithmetic, elementary physics, chemistry, botany, zoology, physical geography, commercial geography, economics and business technique must also be taught; and commercial law, ethics, political government, legislation as it is related to industries, natural science, commercial chemistry and finance should also be included in the business curriculum. The business man of the next generation must be, perforce, an educated man, and the boy who starts in at fourteen or fifteen years of age to equip himself for a business career on the higher plane can hardly lay the foundations of it properly short of a seven or eight years' training.

In some of our cities the high schools are already providing the bases of a technical education in what are known as the "commercial courses," but these do not go far enough. In a few of the American colleges courses in economics, finance and elementary diplomacy are open among the "electives"—but even these do not round up the full requirements of what must eventually be understood as a business education. Speaking on this subject, the *Boston Herald* says:

There still remains to be formulated a complete system of commercial education upon which pupils can enter at the age of 14 or 15 years (the high school entrance age) and pursue systematically for seven or eight years, and which shall give them breadth of training as well as specialization. That such a system will be in active general operation before the close of the present decade, no one can doubt who has witnessed the strong current which has been tending in this direction during the past five years.

One great drawback to its more rapid accomplishment is the lack of suitable text-books. In almost none of the broader lines of study do satisfactory books exist at the present time, and since the best text-books are the product of experience acquired in teaching, it will be necessary to wait for them until practice has shown what is needed.

That the American people will take up with this new educational movement with its wonted enthusiasm is a foregone conclusion, for its practical importance is self-evident.

Such a system cannot be formulated in a day or a decade even—but it is already in process of active and rapid development. This is noted in the shaping of the elementary courses in our best private schools for boys, in the partial provision of college "electives" looking to the same end and in the establishment of commercial "schools" as constituent parts of our American universities upon the same plane of dignity and efficiency that marks their law, medical and theological schools.

In its broadest and best sense the spirit of "commercialism" is moving the American people to great achievements. The next generation will have more technically educated business men—perhaps not so many lawyers and doctors, comparatively, as the present.—*New York Commercial*.

### A Little History.

A writer in a recent number of *Pearson's Magazine*, speaking of the cultivation of rice, silk and indigo in this country, says that the culture of silk has been attempted several times in Carolina. The first Huguenots brought over silkworm eggs that hatched on the voyage, so that the worms perished for want of food. Sir Nathaniel Johnson, however, at his plantation, Silk Hope, was more successful in 1699. While he was governor, a few years later he realized several hundred pounds a year from this industry. But the eggs frequently hatched before the mulberry supplied food, and the experiment failed finally. The cultivation of rice was more successful. Accounts differ as to its introduction. The most interesting is that while Thomas Smith was governor, 1693, a ship captain from Madagascar gave him a bag of rough rice, which he distributed among his friends. The experiment was so successful that to-day rice is one of the staple crops of South Carolina. Indigo had been introduced, but its culture had failed, although wild indigo grew abundantly. A second experiment was made about 1741, by Miss Eliza Lucas, daughter of the governor of Antigua, who was in Carolina on her father's place.

# Works Both Ways

If you work for  
**THE SHERWIN-WILLIAMS PAINT**  
 it will work for you. It will make money and reputation for you.

Poor paint on the other hand doesn't repay the time and trouble spent in pushing it. Worse than that, it injures you in a dozen ways. You can't sell much of it no matter how hard you push and the little you do sell spoils your chance for future trade.

We know **S. W. P.** pays well for all the effort put into it because we're selling it ourselves all the time and growing.

## THE SHERWIN-WILLIAMS Co.

### Specialization One Secret of American Success.

The goal toward which all successful manufacturers work is the maximum of units of product at the minimum of cost per unit. This is attained, in part, by large plants and improved machinery, and, in part, by specialization—concentration upon a single specialty.

For example, in a great shop at Mulhouse, in Alsace, employing 5,000 men, I saw water works and blowing engines, locomotives and other heavy machinery, along with cotton spinning machinery and the lightest articles made in iron. The same range of manufacturing would, in the United States, call for half a dozen separate plants, each concentrating effort on a single product, and selling it at figures for which the Alsatian works could not dream of making it. In Great Britain, to use another illustration, an agricultural implement works makes road engines, threshers, mowers and reapers, cultivators, and a variety of small farm tools. But when they put any one of their machines into the field, they meet a Chicago made article which is laid down on the spot at a less price than that for which the British firm can hope to simply produce it. The Chicago manufacturer builds a vast works to make nothing but mowers and binders. One concern employs thousands of men on threshing machines and road engines to haul them, while still other large factories make the cultivators, drills, etc. Machines turned out by tens of thousands, instead of thousands, can be made in greater perfection and at materially lower cost, even if all other factors are uniform. But if cheaper raw materials, more efficient labor, better management, and more up-to-date works be added, the transatlantic competitor of America is, indeed, facing a difficult proposition.—ARTHUR BROWN, in *Cassier's Magazine* for March.

### Hardware Club of New York.

At a meeting of the Board of Governors of the Hardware Club of New York, held on May 20, the following gentlemen were unanimously elected to membership in the club:

George E. Barton, 3 Park Place, New York.  
 D. J. Carroll, 393 Pearl Street, New York.  
 Thomas B. Clatworthy, 93 Chambers Street, New York.  
 Safford K. Colby, Pittsburgh Reduction Co., New York.  
 Henry Gleason, 258 Broadway, New York.  
 T. H. Gossett, Peck, Stow & Wilcox Co., New York.  
 Howard S. Hart, Hart & Cooley Mfg. Co., New Britain, Conn.  
 Barton E. Kingman, 60 Worth Street, New York.  
 D. H. McConnell, 126 Chambers Street, New York.  
 E. Bertram Pike, Pike Mfg. Co., Pike Station, N. H.  
 James H. Ritter, Biddle Hardware Co., Philadelphia.  
 George S. Terry, 277 Broadway, New York.  
 John Adams Thayer, 17 West Thirteenth Street, New York.  
 Morris S. Thompson, 256 Broadway, New York.  
 Walter L. Tyler, 220 Broadway, New York.  
 T. S. Van Volkenburgh, 62 Worth Street, New York.  
 Alfred Weed, Nicholson File Co., Providence, R. I.  
 Frank F. Weston, 99 Chambers Street, New York.  
 William T. Woodruff, Thomaston, Conn.

### Chances For Young Men.

The chances for young men in the United States were never better, says J. Sterling Morton in his weekly paper, *The Conservative*. All the aged men, all the men in middle life, will soon be marched to their final and everlasting bivouac, and their places occupied by the now young men. Brains, integrity and ambitious industry will put the poorest boy in the land at the head of professional, commercial or financial life as against the intellectual and moral imbecile begotten in wealth.

## RECENT TRADE PUBLICATIONS.

W. H. COMPTON SHEAR Co., Newark, N. J., for whom Underhill, Clinch & Co., 94 Chambers Street, New York, are the sole export agents, issue a very attractive pamphlet catalogue of 24 pages, covering a line of Shears, Scissors, Tinners' Snips, etc., manufactured by them under the trade-mark of "Reliable." The line manufactured covers all the popular styles and sizes necessary to form a complete assortment, including everything from Tailors' Shears of all the various styles and sizes to Barbers' Shears, Tinners' Snips, Dental Snips, etc., and including in the contents the usual line of japanned and nickel-plated straight and bent trimmers adapted for either right or left-hand use, together with Bankers' or Paper Shears. They also manufacture a full and complete line of Pocket, Embroidery and other Scissors for ladies' use, in which line of goods are included Buttonhole, Manicure and Nail Scissors, together with Tailors' Points. The company are the manufacturers of the improved Ball Bearing Shears, which are claimed to be something entirely new, possessing the principle of the frictionless ball bearing mechanically applied to a practical cutting tool, and the use of which obviates the spring or "give" which frequently causes so much dissatisfaction in corresponding goods, referred to as the "chewing" or "doubling up" of material on the points. This would seem to be an article worthy of the closest investigation, being something radically different from the conventional shear which the trade is accustomed to sell.

PARRY MFG. Co., Indianapolis, Ind. Supplementary catalogue of a line of Surreys, Stanhopes and Phaetons, together with Spring Buggies and fancy Road Wagons, which they have added to their assortment since the publication of their previous catalogue. This only represents a few additional pages, and as they themselves suggest on the title page, it would be advisable for the trade handling goods of this description to write for a complete catalogue of 1901, which gives their entire line with full descriptions, showing the goods in great variety.

P. J. CONROY, 75th and Island Road, Philadelphia, Pa. 1901 catalogue of the "Conroy" Automatic Refrigerator Door Fasteners and Locks, Hinges and Refrigerator Trimmings. This well-known concern has manufactured these goods for a number of years, and this catalogue, although limited in dimensions, covers the line in good shape, showing the Fasteners in various styles, as well as a line of ornamental Bronze Refrigerator Hardware sold in connection therewith. Included in its contents are to be found Refrigerator and Cooler Faucets, Ideal Ice-House Levers, cast brass Refrigerator Door Hinges in several varieties, cast brass plain Hinges in several shapes, together with brass Door and Drawer Pulls.

STATE LINE MFG. Co., Chattanooga, Tenn. Envelope size catalogue of 20 pages, showing by the aid of good illustrations the line of Acetylene Gas Burners in a variety of sizes and kinds that are manufactured by this company under D. M. Steward's patents, which are claimed to meet all the requirements and existing conditions for the proper illumination by the aid of calcium carbide, the construction forming a radical departure from all precedent in burner making, working on new and original lines. The burner is claimed to be one that has proven commercially successful, and on account of its originality has attracted widespread attention, yielding, it is claimed, a remarkably high degree of candle power when compared with similar appliances now on the market. The catalogue shows all the various forms in which

a burner of this description needs to be made, from a single flame to a size that is increased in intensity by three or four flames. The assortment includes also one adapted for an Argand burner, giving a round flame and in intensely white light. This will be found a very instructive little pamphlet by those interested in the introduction of acetylene gas for domestic or other purposes.

KINNEAR MFG. Co., Columbus, Ohio. Oblong catalogue of 56 pages, 11x8 inches, embracing in its contents a full description of the Kinnear Steel Rolling Doors and Shutters, which has been a noted specialty of this well-known company for a number of years. This is one of the most thoroughly up-to-date catalogues exploiting goods of this description that has come to our notice. Illustrations are given of the different buildings of every description for which a feature of this kind would be of importance. The illustrations include a view of the Boston Elevated Railroad Co.'s premises; also the Worcester Consolidated Street Railway Co., in which is shown what is claimed to be the largest door of its kind ever constructed, covering as it does an opening of 35 feet 6 inches wide by 20 feet high, the door operating with the greatest possible ease, notwithstanding the weight when ready for installation was approximately 7,000 pounds, but was equally balanced at any position. This class of work is peculiar to this company, their facilities for manufacturing and the construction thereof being unequaled, and covering so many possible requirements. An illustration is given of the ocean pier of the Pennsylvania Railroad Co., at New York; the freight station of the Baltimore & Ohio Railroad Co., at Baltimore; the Baldwin Locomotive Works, Philadelphia; car-house of the Chicago Union Traction Co., and a large number of other structures in which these rolling doors and shutters form important adjuncts. In the present age of steel construction it would seem as though a book of this description would be a very desirable one for the Hardwareman and architect to be familiar with. It certainly has had a great deal of attention given to its compilation and expense in its publishing.

SIMMONS HARDWARE Co., St. Louis, Mo. Catalogue No. 392 of Bicycles and Bicycle Sundries. This is a pamphlet catalogue of 200 pages covering all the possible varieties of Bicycle Sundries, commencing with Crank Hangers, Crank Hanger Bearings, Head Cups and Cones, Hubs, etc., all the way through the entire line, concluding with a number of such desirable goods as could be included in the sales of a bicycle dealer, such as Pliers, Cutting Nippers, etc. This is a catalogue evidently gotten up to facilitate the perfect mail-order system carried on by this well known company, and in connection with their distribution of bicycles, which is claimed to be the largest in the United States of any jobbing house, a catalogue of this description will be found exceedingly useful.

E. W. BLISS Co., Brooklyn, N. Y. Twenty-four page pamphlet catalogue, printed on coated paper and handsomely illustrated, a feature of the catalogues issued by this old-established company, who are noted for turning out catalogues worthy of preservation. The one under review gives an illustration of the extensive works now occupied by this company, and shows on its pages the variety of "Stiles" Power Punching Presses, of which full descriptions are given as to the advantages to be obtained in their use, the admirable features that are noted in connection therewith, together with a number of other articles in the line of heavy presses worthy of the consideration of those handling this description of goods.

## NEW GOODS AND SPECIALTIES.

### The New Departure Coaster Brake.

The illustrations accompanying show the latest model of the New Departure Coaster Brake. The new construction embodies all the principles of the older patterns, but the arrangement of parts and application of mechanical principles have been revised on lines suggested by the practical results obtained by experience in manufacture and use.

The new form can be taken apart and put together by any one, without the aid of tools and requiring scarcely more time than with the ordinary solid hub. No attention is required, beyond oiling, and both coasting and driving bearings are adjusted by the cone at sprocket side.

EXTERIOR VIEW.

This illustration shows the hub fully assembled ready for lacing into wheel of bicycle. It will be noted that the general outline is symmetrical and when laced into wheel the design is particularly pleasing, there being nothing in its appearance to indicate a change from the ordinary hub, except the brake on left hand side.

The illustrations of parts show the extreme simplicity and strength.

THE HUB BARREL

is provided with a ball cup in each end and a brake drum, all formed in one solid piece of steel. There are no parts to be screwed in, all slipping together by hand and securely fastened by the small adjusting cone shown on axle.

THE AXLE

is of the usual construction used with solid hubs. Simply a straight rod with screw threads at each end.

THE SPROCKET AND DRIVER.

The part to which sprocket is attached projects within the hub and operates the clutching device. When coasting and holding the feet stationary, this part through its engagement with the part shown below, clutches the brake and a slight backward movement expands the brake ring into drum of hub and retards the wheel in exact proportion to the backward pressure exerted.

THE CLUTCH

in operation with part shown above is provided with an internal clutching surface which engages with the brake shown below upon a backward movement of the pedals, upon forward movement the outer clutching surface engages the hub barrel and propels the wheel.

THE BRAKE AND ITS ACTUATOR

is operated by the clutch shown above. The brake is composed of a split steel ring which is expanded into frictional contact with the brake drum shown on hub barrel. The parts are hardened steel and of a strength rendering them practically indestructible. No fibre, leather or any material softer than steel is used.

DETACHABLE SPROCKETS

provide for the fitting of hub with any size, thickness or pitch of sprocket and also allows for  $1\frac{1}{2}$ ,  $1\frac{5}{8}$  or  $1\frac{3}{4}$ " chain line, all on the same hub.

In the illustration above the No. 2 sprocket in center provides for  $1\frac{5}{8}$ " chain line. The No. 1 for  $1\frac{1}{2}$ " chain line and the number 3 which is the No. 1 reversed, for  $1\frac{3}{4}$ " chain line.

It will be observed that the dealer provides for all possible requirements by keeping in stock an assortment of sprockets which can be returned at any time at full price, or exchanged, and a comparatively small number of hubs.

SECTIONAL VIEW

The part E which is rigidly connected to sprocket G, is connected by spiral keys with the clutch sleeve D. The forward motion of sprocket clutches the hub, the backward motion the brake. The balls are  $\frac{3}{8}$ " in size and all are mounted in containers to facilitate handling. All bearings are absolutely free and all are adjusted by cone I.

They are guaranteed by the makers for one year and all repairs will be made free of charge.

Patents have been taken out in all of the principal countries.

The New Departure Bell Co., Bristol, Conn., and P. & F. Corbin, of New Britain, Conn., are the makers.

### Bradley Steel Shelf Bracket.

Atlas Mfg. Co., New Haven, Conn., who are the manufacturers of the Bradley Steel Wire Shelf Bracket now so popular with the trade, are not content to consider their bracket so perfect that no improvement will be entertained. We present herewith illustrations which show that after having been steadily working to improve these goods for the past six or seven years, in response to the suggestions of the trade, they have made three distinct changes in the bracket since it was first brought out. The first was the changing of the screw holes which were originally placed one over the other and not side by side as at present. When it was discovered that the original position brought the screw holes in line with the grain of the wood, producing a result quite frequently that the wood split when the screws were driven in, the matter was at once attended to, and the change was made which is embodied in their present construction. This added considerable to the factory cost of the bracket as it was necessary to make the several offsets in the wire by new and improved machinery, but the improvement was too evident, and was immediately attended to upon attention being called to this defect. This was followed by the change in the size of the wire used in the bracket, some dealers having deemed it somewhat too light to be of the general utility that it is at present. The change of the gauge involved making new sets of dies all through, but with the desire to produce a bracket that would stand any adverse criticism when compared with similar brackets, actuated the manufacturers in making this improvement at once. It was later pointed out that occasionally the lock which they were using for fastening the ends of the wire together, failed to grip them securely, and the inventive ability of the manufacturers was brought to the test, and very recently they have devised a new method of locking the wires which gives a result that produces as perfect a bracket as it is possible to make.

As first made the ends of the wire were brought together under the metal clasp near the angle on top. In a few instances, when subjected to severe strain, the lock did not hold and the wires pulled apart. This lock was made thus:

As now made the wires are brought together at the extreme end on top of the bracket. This secures *two solid wires* through the whole length of the bracket, eliminating entirely the only difficulty that has ever shown itself. Considerably

PAT. APR. 5, 1899.  
NOV. 8, 1899.  
APR. 4, 1900.

BRADLEY STEEL BRACKET.

heavier wire is used than formerly and the strength of bracket is ample. The "best types" of flat steel all have the

folded brace; that is U shaped in cross section. The manufacturers claim that a brace consisting of a simple piece of flat steel, though corrugated, has very little lateral resistance, and frequently "buckles" under a relatively light load, even though the wall plates are amply strong. We are glad to call attention to these several features constituting as they do improvements in every respect, because when an article of this universal utility is sold largely to the trade, and criticism is made of the character above referred to, it is too often the case that the manufacturer lets the product be distributed without the desire to make such improvements as would place it beyond competition. With the Atlas Mfg. Co. it is very evident this is not the case, and they state they will never fail to improve their goods in any particular when their attention is once brought to the desirability of doing so.

### Improved Self-Melting Wax Strings.

C. C. Fouts, Middletown, Ohio, has been made the sole agent for the United States and Canada for the Improved Self-Melting Wax Strings, the utility of which may be judged from the engravings which we present herewith. The strings are referred to as being especially adapted to use on fruit cans and jars whether manufactured from stone, glass or tin, and are claimed to be very adhesive. If the instructions are followed in regard to their use, it is claimed that no failure will ever result in keeping fruit successfully in this manner. Fruit prepared by the use of these Wax Strings has been successfully shipped in glass jars over 2,000 miles. Among the many points of excellence referred to by the manufacturer may be enumerated that the strings are

economical, reliable, durable, convenient and non-poisonous; that once sealed tight the cans will remain in that condition for years; that the strings will not come loose from the heat or cold, and will stand freezing; that contraction or expansion has no effect upon them, and there is no trouble at any time in opening a can or jar sealed by this improved method. These goods are put up in pasteboard packages, containing 100 strings, ten packages forming a carton, and five cartons in a case. They are made in three sizes: 8-inch strings for glass jars; 12-inch strings for tin cans and 14-inch strings for large jars. It would seem that there was sufficient merit underlying a specialty of such universal application to warrant its being kept by every Hardware store, especially those handling fruit jars or cans.

### "Dandy" Sink Cleaner.

John W. Sudlow, 986 Halsey Street, Brooklyn, N. Y., is the manufacturer of the "Dandy" Sink Cleaner, which has been before the Hardware trade for several years and achieved a popularity for an article of this description that commends it to the stock of all Hardware dealers handling house-furnishing goods, it being a well-known fact that housekeepers generally realize the importance of having an article of this description close at hand, in order to keep their kitchens in

a condition of cleanliness that makes their arduous labors a domestic pleasure. But few specialties seemed to meet all the requirements until the advent of the "Dandy" Sink

"DANDY" SINK CLEANER.

Cleaner. This is constructed of sheet steel, handsomely tinned to prevent rust, and then gold lacquered in order to make it an attractive specialty. The clever adjustment that enables the shovel to be used independently of the cleaner is shown in the illustration herewith, as everything in the way of refuse can be readily removed from the sink and the adjustable cleaner leave it after the operation in a thoroughly clean condition. As it is designed by the manufacturer that it may be marketed at a moderate price, it is easy to account for the popularity it has gained, which we are assured by the manufacturer, increases with each returning season.

#### Krauter's Improved Belt Punch.

Tower & Lyon, 95 Chambers Street, New York, in addition to the large number of labor-saving devices and other specialties which they control, and with the merits of which the trade are thoroughly familiar, have recently added to their line of "Krauter's" Fine Tools, an ingeniously constructed and extremely powerful Belt Punch, which will be known to the trade as No. 211. The mechanical excellence of this desirable article may be understood when the statement is made that it is so strongly constructed that a hole may be punched through the thickest leather belt with no greater

IMPROVED BELT PUNCH.

expenditure of force than the user may easily supply by one hand. It is provided with a good long reach in order that it may be placed far enough in on the belt to meet every possible condition regarding its use. It is extremely simple in its construction, formed of but few pieces, and possesses nothing complicated that would be liable to get out of order. Nothing but the best material has been used in the manufacture of this tool, the manufacturers realizing that for the purposes to which it is applied, great care and consideration should be devoted to its manufacture in order to make it as perfect as possible.

Kitty—You know that nice, middle-aged Mr. Smith that Clara was so crazy about?

Nancy—Yes; what of him?

Kitty—Well, now that their engagement is broken, she speaks of him as "Old Man Smith."—*Indianapolis Journal*.

**PATENTS** Preliminary Consultation Free.  
**HENRY J. MILLER,**  
55 Equitable Building, BOSTON.

#### New Riveting Machine.

The accompanying illustration shows a remodeled riveting machine, built by the F. B. Shuster Co., of New Haven, Conn., and is known as the Shuster model.

Riveting machines of the Adt model have been built by this company for a long period of years, and this new machine represents the results of long experience in the capability and durability of the elastic rotary blow type of riveter.

One feature immediately noticeable over the old type of machine is the direct and central application of power to the oscillating cylinder containing the hammer rods and compression springs. The cylinder being entirely enclosed by metal forming a large guiding surface moves very freely, and with the combination of the direct drive enables the speed of the machine to be increased materially. The increase of speed varies from 20 per cent. to 35 per cent. in the different sizes of Riveters over the old type of machine. This statement means that a corresponding increase in the num-

ber of blows per minute are obtained, and therefore the time required for heading a rivet is reduced, resulting in an increased output of the machine.

Another important feature which greatly improves the quality of the work done on the machine is the positive rotary motion given to the hammer rod through the medium of a worm and gear. This feature is also embodied in the lower revolving fixture, which is fastened to the circular table, when it is desired to head both ends of a rivet at the same time. The action of the riveting hammer when revolved by this method is to create a regularly applied "breaking down" action, which causes the rivet to spread evenly on all sides, thereby forming an even shaped head on the

rivet. From the small illustration an idea may be gained of the shape of the hammer forming and how the cross-shaped point,

while the hammer is being rotated at the same time, as striking the blow covers in regular rotation every point of the head being formed.

The Riveters of all sizes are built with the long face in front, and are fitted with the circular table as shown in the illustration, or with the flat, vertical faced anvil that was formerly furnished with the style "B" machine of the Adt model. This arrangement enables a purchaser to have a single machine, and with the two styles of tables to handle all variations of work. A uniform equipment of machines can be thus obtained.

The new Riveters are built in the same range of sizes as the old type of machine, viz.: 1-16 inch,  $\frac{1}{8}$  inch, 3-16 inch,  $\frac{1}{4}$  inch,  $\frac{3}{8}$  inch and  $\frac{1}{2}$  inch, with the addition of  $\frac{5}{8}$  inch and  $\frac{3}{4}$  inch sizes. They are essentially a manufacturer's machine, and are desirable in all lines of manufacturing where rivets are used.

Any inquiry or information desired in regard to the new type of Riveting machines will be cheerfully answered by the builders.

#### Fox Machine Co.'s Pan American Exhibit.

Fox Machine Co., Grand Rapids, Mich., have an excellent exhibit of their Wood and Iron Working Machinery, and also of their Steel Sash Pulleys at the Pan American Exposition, in Machinery Building, Block 38. As they are the original manufacturers of Steel Sash Pulleys, the exhibition they make of this perfect product is an object lesson well worthy of giving some consideration to by the visitor who desires to keep well informed of the improved condition of so useful a specialty as the Sash Pulley. As they have an Exposition staff on hand to show the visitor the great improvement already existing in the wood and iron working machinery before mentioned, they will also be pleased to show any of the particular features of excellence of the four styles of these Steel Sash Pulleys, which will include their new No. 10 now on the eve of production, and which we hope to give illustrations of in an early number.

#### An Ohio Trolley Ride.

Branching east along Euclid Avenue and extending twenty miles or so from Cleveland, lies one of the most interesting electric routes of Northern Ohio. It is a most delightful and picturesque ride and passes through the attractive and busy village of Willoughby. So fascinating here are the pictures of village life and its varied scenes of home so content that one is indeed surprised at the activity of so large a manufacturing plant as that of the Willoughby Fork & Mfg. Co., which turns out each day hundreds of highly finished Forks of every conceivable size and shape and for every purpose demanded by the trade.

This Fork factory is the pride of the town and its recently acquired success among the Hardware people of all countries has demonstrated the efficiency of its management and the liberality of its financial supporters. Its officers and directors are men well trained in the steel and iron trade; Thos. H. Jopling, the President, having been fairly raised in this branch of manufacturing, has shown his practical knowledge to a marked degree, while R. M. Bond, the Secretary and Treasurer, has been favored with a most liberal yet systematic training. The Superintendent, C. D. Lansing, has for years had that minute and skillful application that marks his products with the thorough touch of a true and modern mechanic. All their skilled workmen in each particular line have been brought from the factories showing a marked degree of perfection in the points for which that mechanic was employed. Every man employed shows an interest in his work above the ordinary, and the spirit which permeates the entire plant is one of co-operation. The realization of all the employed that the company is entirely independent of any trust or combination, instills within them the possibility of having a just pride

and personality in every Fork they help to make. Under these conditions it is but a natural sequence that the market is supplied with a tool that is the perfection of the twentieth century, and so varied in its styles and sizes that any Fork user can easily be satisfied. Their advertisement on page modestly sets forth their claims for an early inspection of their goods.

#### PATENTS.

The following list of Patents, Trade Marks and Designs of interest to our patrons are furnished by Davis & Davis, Solicitors of American and Foreign Patents, Washington, D. C., and St. Paul Building, New York City.

#### Patents Issued May 14th, 1901.

- 673,876. CURRYCOMB, Edward G. Kubler, Wurzburg, Germany.
- 673,897. SELF-CLOSING FAUCET, David M. Bredin, Pictou, Canada.
- 673,907. PORTABLE CLOTHES-LINE REEL, Andrew P. Johnson, Minneapolis, Minn.
- 673,932. MEAT-SLICER, Peter S. Transue, Delaware Water Gap, Pa.
- 673,933. SHARPENER FOR SCISSORS OR KNIVES, Chas. C. Wallace, Delhi, N. Y.
- 673,969. TRUSSED LADDER, Wm. J. Rutledge, Otisville, Mich.
- 674,004. VALVE FOR FLUSHING TANKS, Oscar R. Hess, Cincinnati, O.
- 674,038. CURRYCOMB, Charles H. Obey, Galena, Ill., assignor of five-eighths to R. J. Edwards, same place.
- 674,088. BOLT-CUTTER AND NUT-SPLITTER, Abijah Hoak, Sterling, Ill., assignor of one-half to Wm. B. Carolus, same place.
- 298,738. VALVE MECHANISM, David T. Ellis, Bridgeport, Conn., assignor of one-half to the Belknap Mfg. Co., same place.
- 298,745. APPLE PARER, CORER AND SLICER, Wm. H. Griscom, Reading, Pa.
- 298,750. HYDRAULIC COCK OR FILTERING-FAUCET, Albert Hollowell, Lowell, Mass.

- 298,995. CLAMP FOR FRAME-SAWS, Andrew McNiece, Newark, N. J., assignor of one-half to Rowland Hilton, same place.
- 299,076. COMBINED STREET AND LAWN SPRINKLER, Joseph Jungbluth, Erie, Pa.

The fire loss of the United States and Canada, as compiled by the New York *Journal of Commerce*, shows a total of \$11,352,800, as compared with \$15,036,250 in March of this year, and \$25,727,000 in April, 1900. The total loss for the first four months of 1901 amounts to \$56,956,000, as against \$66,258,500 in the corresponding period of last year. The Jacksonville disaster will, however, about equalize the difference in favor of this year.

## REVIEW OF THE MARKETS.

**Wire Nails:** Nothing specially new in the condition of the Wire Nail market. The mills are gradually catching up on specifications that have been somewhat delayed and dates of delivery are more frequently given. An unusually good demand is still the feature of the business done, the stocks throughout the country being anything but excessive. The market continues firm at former quotations, which are as follows: f. o. b. Pittsburgh, terms 60 days, or 2 per cent. discount for cash in ten days:

To jobbers in carload lots.....	\$2.30
"    less than carload lots.....	2.35
To retailers in carload lots.....	2.40
"    less than carload lots.....	2.50

**New York prices** are steady at quotations that we give below. The demand continues a steady one without a great amount of eagerness being manifested. Quotations are as follows:

To retailers, carload lots on dock.....	\$2.53
Small lots at store.....	2.60

**Cut Nails:** The current demand for this staple line is in excellent condition. Occasionally some irregular quotations are heard of in which the differences between the quotations for carload lots and smaller quantities are not so rigid, and a slight concession is frequently heard of. The following prices represent the market f. o. b. Pittsburgh, plus the actual freight to point of destination, terms 60 days, or 2 per cent. discount for cash in ten days:

In less than carload lots.....	2.10
Carload lots.....	2.05 to 2.10

**New York prices** indicate no weakness in the market to any great extent except the conditions referred to above in regard to less difference being charged according to the quantities desired. The following quotations represent the market:

To jobbers in carload lots on dock.....	\$2.15
"    less than carload lots on dock.....	2.20
Small lots from store.....	\$2.25 to 2.30

**Barb Wire:** There is still a good demand for Barb Wire from nearly all parts of the country, but the larger orders that have been in the hands of the mills are nearing completion, and supplementary orders do not show up in very large quantity. The mills are still running full time, having enough orders ahead to prevent any surplus stock accumulating. Quotations are as follows, f. o. b. Pittsburgh, terms 60 days or 2 per cent. discount for cash in ten days:

To jobbers in carload lots, Painted.....	\$2.60
"    Galvanized.....	2.90
"    less than carload lots, Painted.....	2.65
"    Galvanized.....	2.95
To retailers in carload lots, Painted.....	2.70
"    Galvanized.....	3.00
"    less than carload lots, Painted.....	2.85
"    Galvanized.....	3.10

Ellwood and Baker Wire is 5 cents and Washburn & Moen Glidden 10 cents per 100 pounds higher than the prices above named.

**Plain Wire:** There is a much more decided demand for plain wire, the orders for which being more frequent. Complaint is made in all sections of the inability of the mills to deliver promptly, notwithstanding the fact they are running to their fullest capacity, but the continued demand gives no signs of abatement. Quotations are as follows, f. o. b. Pittsburgh, terms 60 days, or 2 per cent. for cash in ten days:

	Base sizes.	
	Plain.	Galv.
To jobbers in carload lots.....	\$2.25	\$2.65
"    less than carload lots.....	2.30	2.70
To retailers in carload lots.....	2.35	2.75
"    less than carload lots.....	2.45	2.85

The above prices are for the base numbers, 6 to 9. The

other numbers of Plain and Galvanized Wire take the advances indicated in the following table:

Plain Fence Wire Advances (Catch Weights).		
Nos.	Base.	Galvanized.
6 to 9.....	Base.....	\$0.40 extra.
10.....	\$0.05 advance over base.....	.40 "
11.....	.10 " " " " " " " " " " " "	.40 "
12 and 12½.....	.15 " " " " " " " " " " " "	.40 "
13.....	.20 " " " " " " " " " " " "	.40 "
14.....	.25 " " " " " " " " " " " "	.40 "
15.....	.30 " " " " " " " " " " " "	.40 "
16.....	.35 " " " " " " " " " " " "	.40 "
17.....	.40 " " " " " " " " " " " "	.40 "
18.....	.45 " " " " " " " " " " " "	.40 "

For even weight bundles, 50 pounds and over, 5 cents per bundle advance on above.

**Plumbers' Brass Goods:** Landers, Frary & Clark, New Britain, Conn., notify the trade under date of May 11th, that all quotations on Plumbers' Brass Faucets, Water Cooler and Can Cocks are withdrawn. New prices will be furnished on applications.

**Alaska Cold Handle Hardware:** Troy Nickel Works, Albany, N. Y., under date of May 18th, give notice of the withdrawal of all former quotations on all goods manufactured by them, to take effect on above date, the statement being made that prices will be advanced.

**Trace Chains:** Standard Chain Co., Pittsburgh, Pa., issue a revised list on Trace Chains, in which the various standards are simplified in order to secure a greater degree of uniformity as between English sizes and what has been known as the Western standard. On Trace Chains both long and half traces the American sizes have been abrogated, which is a desirable change. We give the present Standard list herewith:

List May 1, 1901.		
English size.	Long Traces.—Bright or Black.—Straight Links.	
6½ feet, 8, 3.....	Per pair.....	\$1.07
6½ feet, 10, 3.....	Per pair.....	1.10
6½ feet, 12, 3.....	Per pair.....	1.40
6½ feet, 14, 3.....	Per pair.....	1.70
6½ feet, 16, 3.....	Per pair.....	.90
6½ feet, 8, 2.....	Per pair.....	1.00
6½ feet, 10, 2.....	Per pair.....	1.17
6½ feet, 12, 2.....	Per pair.....	1.36
6½ feet, 14, 2.....	Per pair.....	1.61
6½ feet, 16, 2.....	Per pair.....	2.00
6½ feet, 8, 1.....	Per pair.....	2.50
6½ feet, 10, 1.....	Per pair.....	1.00
6½ feet, 12, 1.....	Per pair.....	1.15
6½ feet, 14, 1.....	Per pair.....	1.31
6½ feet, 16, 1.....	Per pair.....	1.63
6½ feet, 8, 1.....	Per pair.....	1.94
6½ feet, 10, 1.....	Per pair.....	2.33
6½ feet, 12, 1.....	Per pair.....	1.40
6½ feet, 14, 1.....	Per pair.....	1.60
6½ feet, 16, 1.....	Per pair.....	2.00
7 feet, 8, 3.....	Per pair.....	2.10
7 feet, 10, 3.....	Per pair.....	
T Bar, Hooks, or T Hooks, 2 cents net per pair extra. Traces with 5 end links, 3 cents net per pair extra.		
Add 2 cents net per pair for 6 to 12 Twist link.		
Add 4 cents net per pair for 14 to 20 Twist link.		

The quotations on these goods at the present time indicate an advance, the nominal discount being 50 and 10 off.

**Linseed Oil:** Quotations are without change. The Dean Linseed Oil Co. quote as follows:

In lots of less than 5 barrels.....	62 cents per gallon.
In lots of 5 barrels or more.....	61 cents per gallon.

The five-barrel price applies only to deliveries of that quantity at one time.

Bolled Linseed Oil, 3 cents per gallon higher than Raw.	
Calcutta Oil, 85 cents per gallon.	

### THE PHILADELPHIA TRADE.

May trade has been fully up to the average, and, in fact, ahead, although there is increasing difficulty in getting goods, some lines being four to six weeks behind, while on some others the manufacturers freely confess their inability to supply the demand this season. Even on staple goods the shortage is very great, and in many cases it is impossible to promise prompt shipment.

Prices, under the circumstances, remain remarkably even,

and there have been very few changes of note. The manufacturers generally are pursuing a conservative course, and seem loath to cause fluctuations in prices, although in some lines, they have been obliged to make a small advance to keep pace with the increased cost of material and labor.

It is frequently overlooked how material has been the advance in the price of the last named factor, viz.—labor, which now generally commands an increased rate, while the threatened strike of machinists causes some anxiety as to a still further shortage of goods in the near future.

The outlook for trade, however, continues good, and the market appears likely to hold its own for some time to come, while collections are perhaps better than usual.

BIDDLE HARDWARE CO.

#### THE PITTSBURGH TRADE.

Trade continues good with Hardware jobbers, and May promises to be the record month in amount of sales.

The late opening of Spring weather undoubtedly cut off a large amount of trade, as farmers made old tools answer or did without many they would have bought. Notwithstanding this fact, sales are ahead of the same months of 1900.

We note in trade papers articles on the unsatisfactory profit in Builders' Hardware. This is a matter that should have the attention of the trade. Builders' Hardware is a line requiring expert knowledge, and there are numerous pitfalls where the unwary may make costly mistakes; there are almost always goods returned in unsalable condition after a contract is complete, which must be credited at full rates. It takes time to handle, and there are risks in collection of accounts. When all these matters are considered, the dealer should have 25 per cent. at the least for his margin and then will only make a small net profit.

Competition has cut this margin until much of the business is done at a net loss, and merchants should wake up to the true conditions. In such prosperous years as the present, when there is business for all, would be the time to begin to get a fair return on this class of goods.

LOGAN-GREGG HARDWARE CO.

#### THE CLEVELAND TRADE.

The stock panic came because it was time for it in the minds of the operators of Wall Street. There was no other reason; the investments that were being made were largely legitimate, but Wall Street failed to realize the immense accumulations that the owners wished to invest. The advance in value was perfectly legitimate based upon increased wealth.

A stock paying 6 per cent. dividend is considered a good investment by thousands of people at 150.

A large amount of the purchases up to May 1st were good investments on this basis, and will be wanted before September at the same price. No money panic is possible in our condition. Business is largely done on a cash basis; let a bank be organized with a million dollars capital (a common event) in any of our large cities and five million will be subscribed. If any of the parties to whom the stock is allotted fails to take it others are ready to do so as an investment.

Wall Street operators are surprised at what seemed Western recklessness, but the West will continue to surprise them until they realize the great change that is caused by thousands of borrowers becoming investors and seeking investments.

New York is not the only financial centre, and more and more the influence of the West will be felt. The crops will be moved and railroads be built, financed by Western institutions. The Pacific Coast is rapidly advancing in ability and wealth, and the Central West is ceasing to depend on borrowed capital. The rapidity of the change may well surprise Wall Street and the world; none of us fully realizes its significance.

Trade is still on a high level and collections excellent.

THE LOCKWOOD-TAYLOR HARDWARE CO.

#### THE SAGINAW TRADE.

A wave of prosperity seems to have overrun the United States, and here in Michigan it is still running, and the Hardware business is of such a character and kind that the jobbers and retailers go about with faces expressing satisfaction. As we travel about visiting different localities throughout the State, a close observer cannot help but notice the stir and bustle that denotes business interest of some sort. Hotel lobbies are full of traveling men, well-dressed, prosperous looking fellows that have success written all over their smiling, genial faces. Not only these, but contractors, builders and promoters are in evidence. In fact, everything in and about this grand State of ours shows a great awakening of the different business interests. The Saginaw Valley, with its vast coal fields, its salt industries and many factories, is showing up with the best, and the Hardware business is fast growing. Shovels, spades and wheelbarrows are wanted for excavating; the trowel, stone hammer and plumb for foundation walls; while—to finish—calls for the lock and knob, nail, chisel and hammer; and so that light and air may be had, comes the window with putty and glass. The demand for barb wire, nails, etc., is so great that stocks are depleted and factories, by their policy of supplying the foreign demand at lower prices, are starving the home market. We cry for goods, we beg for goods, only to receive a stone-like answer, that we must wait until our turn comes, when the rush is over; "then we will fill your order, for our friends across the water must be taken care of." But, with all these drawbacks, there is a satisfaction in doing business to-day that is truly pleasing.

MORLEY BROTHERS.

#### THE COLUMBUS TRADE.

The demand for goods is heavy, and every one wants quick shipment, which is an impossibility. Jobbers with demands for their average capacity to handle, can make prompt shipments, but when the demand is in excess of their capacity, some one must wait a day or two. We think no jobber has been able to keep up with his orders so far this year, at any rate, we confess we have not been. It has been an impossibility to get certain goods from manufacturers with any degree of promptness. More than one manufacturer has made repeated promises only to break them, and they always make a plausible excuse. The high water in the Ohio River was a happy relief for many a manufacturer. Their reasons for not making shipments was all owing to the flood. We wrote one manufacturer and asked if they referred to the flood in Noah's time, as they had our order two months before the recent flood. We have had no reply, so can't say whether there are any Methusalehs connected with the firm or not.

The country is looking fine, and the farmers are counting on a heavy crop of wheat and hay. The only danger to the wheat now seems to be the chinch bug. This pest is very disastrous, and after an army has gone through a wheat

field, it looks very much as though a prairie fire had visited it. We have had several narrow escapes from frost, but so far not much damage has been done. The weather is cool, especially the nights. Overcoats are comfortable almost every evening. The carpenter strike is still on in our city. It is to be hoped that this week will see the end of it, but contractors say they will not and cannot afford to pay 40 cents per hour, and the Carpenters' Union say they will not go to work until their demands are granted; but our opinion is that they are getting tired of being idle and the majority of them know that 40 cents an hour for good, bad and indifferent workmen is too much, but the paid agitators must make a show for their salary or they might lose their soft jobs. Some workmen are cheaper at 40 cents an hour than others would be at 20 cents an hour, but unions demand that all share alike. That is the injustice in labor unions. There is no incentive for a mechanic to become a better workman than his fellow laborer, as those who do the same class of work get the same price per day. Wages should be paid according to a man's worth. A poor mechanic is benefited by Union prices, but a good mechanic can always get good wages, and, as a rule, more than Union prices, therefore he is loser. If he is a philanthropist, all well and good; but if he is working for wages, he is better off to be his own boss and make his own contracts.

THE SMITH BROS. HARDWARE CO.

#### THE CHICAGO TRADE.

Our business for the month of April amounted to more than any other one month's trade in over twenty-two years. The present month's business promises to be as large. Our orders are so urgent and so much larger than common that we are unable to secure goods as fast as we could sell them, especially in the following articles: Mechanics' Tools in various lines, including Stanley and Disston goods, Window Screens and Doors, Wire Cloth, Poultry Netting, Files, Shovels and Spades, Barbed and Plain Fence Wire, Fence Staples, Hatchets and Hammers, Braces and many articles in Malleable Iron goods. There has also been a very urgent demand for Door Locks, especially in Lock Sets. Trade during the present month promises to be fully as large as it was in April. Collections are very good indeed, and altogether trade is in a very satisfactory condition in Chicago.

WELLS & NELLEGAR CO.

#### THE DAVENPORT TRADE.

Your request for a trade letter from us fortunately came at a time when we had in our office an Eastern manufacturer who is accustomed to making visits to the largest trade centers and the leading Hardware houses in the country. We chanced to be talking over trade conditions, and as his ideas

appear to be comprehensive, we take the liberty of reflecting his opinions of the Hardware industry in this section as observed from the manufacturer's point of view.

This Eastern manufacturer reports as follows: "The condition of trade beyond the Mississippi River is by far the best I have ever known. Jobbers agree in this opinion, and the manufacturers whom I have met attest the truth of the statement. The jobbers and retailers are complaining because they are not able to get their orders filled promptly. It is more than evident that the consumers of goods have made their repairs and provided themselves with the actual necessities of life. Their call for other classes of merchandise indicates that they are ready and can offer to indulge themselves in the comforts and luxuries. All this means good pay for labor, plenty of employment and a most enviable state of thrift and living. A future result of these good times is the extension of business of all kinds. Capital is being invested in the manufacturing of various lines, and to an extent which is worthy the attention of Eastern manufacturers. Hardware jobbers have about the same story to tell, viz.: That the season has been backward but active. Tin and terne plates, sheet metals, barb wire, plain wire, woven wire fencing and, in fact, all wire goods, have been insufficiently supplied. Already there is a call for Autumn and Winter goods, some of which, such as skates, sleigh bells, etc., have suffered for several years. In the case of the former, it is fair to say that the retail buying will be very large for the reason that stocks of these goods have been generally sold out.

Take is as a whole, the Hardware trade is not only splendid now, but it bids fair to continue active for an indefinite period."

SICKELS, PRESTON & NUTTING CO.

#### THE MINNEAPOLIS TRADE.

All labor troubles in this territory have been adjusted on a satisfactory basis with the exception of the machinists. That question comes up next week, and we presume some satisfactory adjustment will be made then.

We have just been looking through crop report sheets that are sent out about once a week by one of the largest grain commission houses operating in this section. We must say that looking through their reports from April 20th to date as to seeding, acreage sown, conditions of the ground and weather conditions, that we must agree with them that "all conditions are exceedingly favorable." They report an increased acreage for all grains equal to average of 10 per cent. and every prospect for a large flax acreage in North Dakota and Northern Minnesota, and we feel they are justified in their statement, that "they have never seen so much to encourage farmers and the grain trade of the Northwest."

completion of the harvest, we are rather inclined to think that people will be justified in saying that there was a boom on, but a boom based on very solid foundation. Business generally throughout this entire territory is exceedingly good, with every prospect of a continuation. Weather fine, quite warm for this season of the year, although we had a cold spell a week ago, but did no harm.

W. K. MORISON & Co.

#### Situation Wanted.

**HARDWARE CLERK**—Young man eighteen years old wishes a position in the Hardware business. Two and a half years' experience. Will go out of town. Address J. A. Pool, care **HARDWARE**, 275 Broadway, New York.

### The Value of Technical Education.\*

BY LYMAN HALL, PRESIDENT OF THE GEORGIA SCHOOL OF TECHNOLOGY.

Mental ingenuity, combined with manual skill, commands the wealth of nations and the admiration of mankind. A group of French and Prussian officers were discussing the statement of a French subaltern that France could make something beautiful of anything by the genius of her masters of workmanship and design. "Bah," said a Prussian, plucking a bristle from his grizzled mustache, "make something beautiful of that." In a few days the bristle was returned in the presence of a distinguished company; but how changed! A snow-white, elastic arc, terminated at the ends with two spheres of gold most delicately wrought, the one Alsace, the other Lorraine; while at the center flashed a diamond beneath which, in startling characters was the inscription: "You hold them but by a hair." Thus was embodied the ingenuity of idea and the genius of constructive skill.

To-day, as yesterday, France, on whose soil have been enacted scenes sufficiently horrible and defeats sufficiently ignominious to dismantle and destroy the greatest of the world's empires, France is still a great power, leading the world in skill, in ingenuity and in design.

The technical schools of the south have been handicapped to a great extent by having to overcome a sentiment which has existed in our section from time immemorial that the workshop is not a fit place for a gentleman.

Oil and dust have been considered by our young men the barrier to polite society and to the associations of our most refined circles. But the young American whose sole physical skill consists in leading Germans in superior social circles will find that they will be led by Germans in the manufacturing world.

Only a short time ago I received a letter from a lady in Tennessee saying that her son was an utter failure in his books, and that she wished to place him in a school where he could be kept busy at manual labor. My reply told her that a diploma from a technical school required more mental than physical effort, and she was advised to keep the young man at home. She wanted a reformatory and not a school. The technical school should not become a work house in its generic sense nor should work be made a punishment for idleness, except for criminals.

This is not an unusual case. In the School of Technology in Georgia, especially in the beginning of its career (I am glad people have learned more about us now), there were some applicants who were almost wanting in mental capacity, and some of whom enjoyed local reputations for laziness and general worthlessness. Their coming was a failure, their progress was nothing and their stay was limited.

The brightest minds should be sent to technical schools, especially those whose natural bent is towards mechanical pursuits. By a proper mental training let us give our youths the desire for manual labor. When the mind is trained to

\*Extracts from address delivered at the Southern Industrial Convention, New Orleans.

create an original design and a hand to fasten an improvement to any existing mechanism for the manufacture of some new staple of commerce, and to transfer the mental photograph with skillful fingers to the drawing board, then the labor of construction becomes a craze, a delight and not a drudgery. This mental skill is the charm which keeps men like Fritz, Sutre, Ferris, Tesla and Edison in their shops and in their laboratories while other men sleep, reaping the thanks and gratitude of civilization and the rewards of genius and fame.

That country which is superior in technical schools will be superior in her manufactures, in her ability to take advantage of her natural resources. Her prosperity will be greater than that of her neighbors and her civilization will be higher. England, France, Germany, Russia and Austria are ahead of our country in this particular. Their schools of technology are older, have more money, and are given more support by the State. In many products they are ahead of us in manufactures.

There is no State whose legislature will refuse to make appropriations for practical education when the subject is properly presented before them. In June, 1897, in the State of Georgia, it was my privilege to advocate the establishment of a department of textiles in the State School of Technology. I did not hesitate to say that when our boys and girls should be instructed in the manipulation of cotton into fabrics of the finest texture and design, that the South would again be in conflict with the North, not in a conflict with arms, but in a struggle for commercial supremacy; that the war would be one, not of secession, but of aggression, and that our own victories, assured us by every environment of forest and field and stream, would mean the emancipation, not of the negro, but of the white race; emancipation from poverty, from ignorance, from the dependence upon other sections for the very necessities of civilization.

As stated, that measure was brought before the people in June, 1897, in a commencement address. In June, 1899, the first textile building in America was ready, equipped and in operation with a cotton manufacturing plant which is said to be superior in variety and excellence to any in the world.

There is some phase of technical education which deserves the especial attention of every city and of every technical school, namely, the training of boys in the trades. Trade schools have been given no attention; and yet they would reach a class of boys who pass through the grammar school, who are forced into business by circumstances beyond their control, and who are barred by every circumstance from colleges and schools of technology.

Courses in wood shop, machine shop, foundry and smith shops, including plumbing, drawing, etc., adapted particularly to the daily demands of commerce and business, would prepare these boys for skilled employment and advanced wages at the age of 17 or 18. At one time in Atlanta the names of over a hundred young men were on the lists of one street car company as supernumeraries; waiting for the opportunity, with no certainty in view, of securing even temporary employment at 12 cents an hour as motormen and conductors.

Four hundred young men have been on the supernumerary list of the police force at one time, and that kind of employment is not noted for being lucrative or pleasant. If the men had had the advantages of trade schools in earlier life, their proficiency as skilled laborers would have commanded three times the wages they were expecting. With such an opportunity in his grasp of becoming a skilled workman, the boy without the means of obtaining higher education would become a competent breadwinner for his family at the age of 17, when his more fortunate companions are going to college and beginning to enjoy the privileges which to him are denied.

Alongside our buildings for testing laboratories and advanced engineering, for the fortunate young gentleman of golden opportunities, let us build the trade school for the boy who must become the early support of his widowed mother and the breadwinner for the brothers and sisters who look to him to drive the wolf from the door. The benefits of such a system require no demonstration, they would reach a greater number than the advantages of high school and college, and their most eloquent advocates may be found in every family when death, disaster or financial reverses have left their legacies of widowhood, suffering and poverty.

### United States Trade in Syria.

Owing to the financial crisis which Beirut is at present experiencing, there has been a considerable decrease in the business of commission houses, and they are the agencies which in this country conduct nearly all the trade with foreign lands. The most extensive importers inform me that their dealings with local merchants have been reduced materially. The gathering of the silk and grain harvests in May and June is likely to afford some relief.

Although there has been a lull in actual business transactions, nothing has been able to check the voluminous correspondence which for the last year or two has been carried on between Syrian mercantile houses and American exporters. The *Trade Index*, *Peck's Buyers' Index*, and *American Exporter* have proved a great help to this consulate in promoting trade, and it is suggested that more copies of these valuable publications might be advantageously distributed in Beirut and other Syrian towns (Damascus, Tripoli, Haifa, Sidon and Latakia) where attempts are being made to open a way for American products and manufacturers.

A recent resurvey of the local field has proved very gratifying, not so much on account of the increased volume of business done with the United States as on account of the general interest manifested by commission firms and merchants here in regard to American products. It should be borne in mind that, except sewing machines, practically no American goods reached this market until within the last two or three years, and the trade is therefore yet in its infancy.

Pharaon, Issa, Schoucair & Co. have lately become interested in American paints, Hardware, iron and steel, coal, cotton goods, etc. They are the largest importers of coal in this country.

B. Audi & Co. have imported over 200 Columbia phonographs, and recently opened a parlor for the exhibition of American phonographs and such electric novelties and appliances as the Ottoman government will admit. Some four weeks ago, they ordered from New York an electric phonograph, which is expected to add new life to the sale of these instruments. Audi & Co. hope soon to light their phonograph parlor by electricity. The best customers for phonographs are the Moslems of Beirut and Damascus, who buy

them for their harems. B. Audi & Co. are daily expecting a \$350 windmill from Illinois, which will be erected in the Bekaa plain (Coele-Syria). They are confident of a future trade in windmills, and believe that these territories will before long require a great quantity and variety of irrigation machinery. They informed me the other day that they had a customer for a 17-horse-power windmill for flour-grinding purposes (estimated value, \$2,000), which also was to be erected in the interior.

Aug. Duplan & Co., as well as the house of Khacho & Co., are looking into the question of American coal. In view of the fact that coal-dust briquettes are now being successfully manufactured in the United States, the American article should be introduced here in the near future. Duplan & Co. have recently bought some \$12,000 worth of American wire nails. They are endeavoring to establish a useful agency for the Barber Line (direct steamers from New York) at Beirut.

American wire nails have been sold by Turkel & Co. during the last year as follows: For Beirut, \$529; Damascus, \$1,173; Cyprus, \$665; Tripoli, \$810. They have also sold wire nails for Yafa and Mersine. Turkel & Co. are especially interested in Hardware, and have made arrangements with a New York house to handle this branch. They assure me that a good opening exists here for American iron in bars and for steel beams, but they have not the capital to enter into this business. It will be taken up by Pharaon, Issa, Schoucair & Co. and others. A Chicago firm is sending Turkel & Co. a sample windmill, to be erected at Yafa.

H. Sabbag & fils was the first Syrian house to bring in from America well-drilling machines and windmills. Although the managers have several specimens on hand, they are not pushing the business at present, as they are waiting for the return of a representative who was sent to the United States for the special purpose of studying this and other matters.

Luttiche & Co. (Damascus) are prepared to represent American export houses. They are expecting a sample shipment of our agricultural implements and garden tools.

N. & G. Araman are in correspondence with American exporters of mechanics' tools and Hardware. There is a promising field in Syria for such articles as well as for iron and steel in other forms.

Another encouraging sign is the prospective appearance on the scene of American traveling salesmen, something unknown in the commercial annals of Syria. A representative of the American Steel and Wire Co. has already been here, and I am credibly informed that two other commercial travelers from the United States are bound for this place. As missionaries for trade expansion, catalogues and price lists are good, samples are better, but "drummers" are by far the best. German success in distant markets is largely due to the German traveling salesman. Commercial travelers rep-

representing various branches of American industry should visit this city once or twice a year, carrying with them full lines of samples. They will be able to get along very well in Beirut, even if they know no other language than English.

G. BIE RAVNDAL, Consul.

BEIRUT, March 23, 1901.

### Trade Opportunities in Mexico.

The following translation from a German paper is sent by Vice-Consul-General Murphy, of Frankfort, April 6, 1901:

The demand for corrugated iron is growing rapidly in Mexico, the amount imported having increased from £85,750 in 1898 to £127,750 (\$417,260 to \$621,632) in 1899. This article is supplied chiefly by Great Britain, the United States and Germany. Competition is sharp, and those firms secure the orders which are able to fill them most promptly and cheaply. The demand is not limited to the City of Mexico, but exists in all parts of the Republic.

There is also an active demand for—

(1) Agricultural machines and implements. These are supplied chiefly by the United States at present. In making deliveries, it is advisable to furnish duplicates of breakable parts.

(2) Machines and tools for mines. There is a good opening for the sale of these articles, although many American agencies have already been established.

(3) Pumps and other appliances for removing water from mines.

(4) Building tools, cutlery, and all sorts of iron and steel wares of good quality; also surgical instruments.

(5) Paints and lacquer.

(6) Glass, porcelain and faience wares; fancy articles of leather—for example, pocketbooks, card cases, etc. These articles must, however, be finished in accordance with the demands of local taste.

### Had Her Foul.

Fogg—I never saw my wife come out second best except once, and that was with a little insignificant looking chap who took pictures.

Bass—And how was that?

Fogg—She pitched into him for not having some proofs ready when he promised. He pleaded the weather and sickness, but it was no use. It only made her bully-rag him the more. Finally a look of desperation came into his face. "Madam," he said, "if you give me any more lip I'll finish up those pictures to look like you."—*Boston Transcript*.

Mr. Skimmerhorn (as the participants in the debate became personal)—I was a thundering fool when I asked you to marry me!

Mrs. Skimmerhorn—Well, you looked it, dear.—*Ex.*

#### American Tools and Machinery.

Speaking of the exhibition of American tools and machinery at the Glasgow Exposition, the *Pall Mall Gazette* notes: "The collection of engineering tools is without doubt the finest that has been seen on this side of the Atlantic, and it illustrates more forcibly the contention, frequently made nowadays, that the old country is dropping behind in the race. It also shows what it is, perhaps a small set-off to this, that the Americans are beating the Germans also. There is a stand held by the Kempsmith Machine Tool Co., of Milwaukee, that is a perfect revelation to the British engineer. Such a collection of lathes, drills and cutting and turning tools of every kind could hardly be produced by any British maker, or of such exquisite finish and durability. It would almost appear, on looking at this magnificent display of transatlantic skilled workmanship, that the steel workers at home had given up the task of trying to beat the American tool makers. As a fact, there is not one maker on this side who is equal to it."

#### Intricate Financiering.

"Juddy and I got into a terrible tangle shopping to-day."

"How?"

"I owed her 10 cents, and borrowed 5 cents and then 50 cents."

"Well?"

"Then I paid 30 cents for something she bought——"

"Yes?"

"And she paid 40 cents for something I bought, and then we treated each other to ice-cream soda."

"Well?"

"She says I still owe her a nickel."—*Detroit Free Press.*

American manufacturers will do well to devote close attention to the growing Egyptian market. Railway and tramway lines are being constructed or extended and important public works are in course of construction. Textiles, metal goods and machinery are the manufactured articles in greatest demand, but there are many other articles in which our manufacturers might easily increase their trade.—*American Trade.*

## HARDWARE DEALERS' RECORD.

Hardware dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

### Incorporations, New Stores, etc.

Chelan, Wash.—The Chelan Hardware Co. has been incorporated. Capital, \$10,000.

Cleveland, O.—The Schorndorfer Hardware Co. capital stock \$25,000, has been incorporated by George S. Solders, George W. Stevenson, Frank W. Lewis, Charles L. Schorndorfer and Charles A. Klump.

Detroit, Mich.—Articles of association have been filed by The Hart Co., which has been organized for the purpose of carrying on a Hardware business. The incorporators are Richard P. Joy, Robert W. and Henry P. Hart, Detroit, and Sidney A. King, Kingsville, Ont.

Elyria, O.—W. F. Bell, George E. Bell, Richard Bell, J. L. Reed and R. H. Sprague have incorporated the Bell Hardware Co. Capital stock, \$10,000.

Florence, S. C.—A commission has been issued to the C. L. Boinest Hardware Co., which is to deal in Hardware, buggies, etc., on a capital stock of \$15,000. The corporators are John L. Barringer and C. L. Boinest, of Florence.

Ferguson, Mo.—Ferguson Hardware and Lumber Co. has been incorporated; capital stock, \$2,000; incorporators, R. T. Blow, N. C. Blow and J. M. Christine.

Guthrie, Okla.—Henricks & Peterson, 111 E. Oklahoma Street.

Harts Grove, O.—Frank Parker.

Hector, Minn.—The Johnson-Peterson Hardware and Furniture Co. has been incorporated with a capital stock of \$24,000.

Hightstown, N. J.—Forman Hardware Co. has been incorporated to take over the business conducted by Spafford G. Forman. The capital stock is \$20,000. The incorporators are: R. G. Forman, Hightstown; John S. Silvers, Cranbury, and Anna P. Silvers, Cranbury.

Ironton, O.—East End Hardware Co. has been incorporated with a capital stock of \$10,000.

Madison, Me.—H. R. Teague has recently opened a Hardware store in the Wentworth Block, on Madison Street.

Minneapolis, Minn.—The Warner Hardware Co. have filed articles of incorporation with the Secretary of State. The company will have a capital stock of \$50,000. The officers of the company are as follows: President, L. C. Warner; vice-president, S. E. Kink; secretary and treasurer, R. L. Warner.

Potsdam, O.—Amos Hall.

Rockland, Me.—The Rockland Hardware Co. has been organized under the general laws of Maine. The capital stock is \$10,000. The parties interested in the company are Albert P. Blaisdell, John A. Johnston and Harry E. Brown. The concern is to do a wholesale and retail hardware business.

Reedsville, Pa.—Hope Bros.

Washburn, Me.—Washburn Hardware Co.

### Changes and Improvements.

Bristol, Vt.—The firm of E. S. and S. D. Farr, Hardware, has dissolved. S. D. Farr will continue the business.

Biloxi, Miss.—The Biloxi Hardware Co. have leased the new store on Howard Avenue, which has just been vacated by L. Lopez & Co., and in a short time will have their business moved to that point.

Columbus Grove, O.—F. E. Palmer has purchased the interest of C. M. Lippincott in the Hardware firm of Lippincott & Morris.

Everest, Kan.—H. A. Price & Co. are erecting a substantial brick store building 22x120 feet, and will occupy it for Hardware and agricultural implements.

Ellensburg, Wash.—J. W. Thomas has sold his interest in the Hardware store to Burt Lambson. The firm name is now Lambson & Son.

Geneva, O.—A deal has been closed whereby C. E. Barnum has disposed of some of his interests in the Hardware business to the Barnum Hardware Co.

Glen Cove, N. Y.—Samuel J. Seaman and his brother, William H. Seaman, have dissolved partnership. They were associated in the Hardware and tin business on Glen Street for nine years. Samuel J. Seaman will continue the business.

Huntsville, Ala.—Nolen & Jones, the Hardware merchants, have sold their business to M. A. Collins, a prominent business man of Frankfort, Ky. An inventory is being taken of the stock, and as soon as this is finished, Mr. Collins will take charge of the business.

Mandan, N. D.—W. B. Haight has sold his Hardware store to R. G. Valency, who travels for Farwell, Ozmun, Kirk & Co., wholesale Hardware dealers. Mr. Valency will place the store in charge of his brother who is an experienced man in the business.

Minneapolis, Minn.—Dr. Frank Miller and Dr. E. O. Miller have purchased the interest of W. G. Wells, in the Wells & McCaughey Hardware store, and the business will be conducted under the name of the McCaughey Hardware Co.

No. Topeka, Kan.—H. M. Cline and Son have sold out their Hardware business to Wolf Brothers, who have already taken possession.

North Creek, N. Y.—W. J. Sullivan is building a new Hardware store in the north part of the village.

San Diego, Cal.—The Hawley Hardware Co. has made a sale to McKenzie, Flint & Winsby of its heavy Hardware.

Stafford Springs, Conn.—H. O. Butterfield has sold his Hardware business to Hannibal Alden.

So. St. Joseph, Mo.—Lewis Keiser has bought the Hagin Hardware stock, and will continue to keep the store open for business at the old place.

Sistersville, W. Va.—The Sistersville Hardware Co. have changed the style of their corporation, and increased the capital

stock from ten thousand to twenty thousand dollars. The new name of the corporation is the Berry Hardware Co. They have opened a store in Clarksburg, W. Va., which will be under the management of F. M. Berry and A. L. Roberts. The Sistersville store will be in charge of F. J. Colbert.

Turin, N. Y.—L. T. Strong is selling out his stock of Hardware.

Tioga, Pa.—William Kimball has sold his interest in the Hardware business of Inscho & Kimball to W. W. Inscho, of Canoe Camp. The firm name is now Inscho & Inscho.

Tokepa, Kan.—T. J. Coughlin has about completed the invoice of his Hardware stock, preparatory to selling a half interest to Ed. Martin. The style of the new firm will be the Coughlin-Martin Hardware Co.

Williamsfield, Ill.—Frank Shaffer has been having his store building, which he lately purchased from T. B. Shaffer, renovated, preparatory to moving his Hardware stock from the bank building.

Wauseon, O.—J. Q. Riddle, of Cleveland, has bought his son's interest in the Hardware store known as Blizzard & Co.

Wilmerding, Pa.—T. B. Thompson has sold his Hardware store to W. B. Brush.

West Union, Ia.—W. W. Wright, of the Hardware firm of Hoyt & Wright, has transferred his interests to Eugene Lawyer, a former employe. The new firm will be known as Hoyt & Lawyer.

Wyman, Ia.—H. G. Dutton has closed out his Hardware and implement business to Larkin & Henderson.

### Recent Fires.

Baldwinsville, N. Y.—John S. Voorhees. Loss, \$10,000; insurance, \$5,000.

Gladstone, Mich.—A. Nicholas. Loss, \$3,000; insurance, \$500.

Jacksonville, Fla.—Florida Hardware Co. Loss, \$5,000.

Kalida, O.—Jos. Neianberg.

Kendall, N. Y.—E. J. Fuller. Loss, \$5,000; partially insured.

## HARDWARE MANUFACTURERS' RECORD.

Hardware manufacturers over the country, are requested to contribute to this page. News of new factories or companies, changes, improvements, etc., will be gladly received, and promptly published.

### New Incorporations, Etc.

East Randolph, N. Y.—A stock company has been formed here and incorporated as the Champlin Mfg. Co., to engage in the manufacture of cutlery.

Grand Rapids, Mich.—The Michigan Hdw. Mfg. Co. has been incorporated with a capital stock of \$15,000.

Indianapolis, Ind.—The Wagner Plow Co. have filed articles of incorporation with a capital stock of \$75,000. The company is organized for the purpose of manufacturing plows and plow extras, wagons and other vehicles, farm and other machinery and implements, and also for conducting a general foundry and machine shop and the selling of the products to individuals and the trade. The board of directors is composed of Everett Wagner, John W. Holtzman, Henry Schnull, Chapin Wagner, Irby S. Wagner, William W. Buchanan and Edward K. Chapman.

New York, N. Y.—Treadkill Mfg. Co. has been incorporated to manufacture pneumatic tools. Capital, \$5,000, and directors: J. H. Killinger, of Lebanon, Pa., and M. H. Treadwell and H. N. Dougherty, of New York City.

Richmond, Ind.—The Richmond Shovel and Tool Co. has been organized in this city with a capital stock of \$100,000, all paid in. The officers of the new concern are: President, Edgar G. Hibber; vice-president, Henry A. Urban; secretary and treasurer, Samuel W. Gaar.

St. Louis, Mo.—The Carr-McGrew Scale Co. have filed articles of incorporation with the Recorder of Deeds. The capital stock is \$25,000. Incorporators, Clarence Y. Carr, Jacob Gross, Alfred Carr and Arthur M. Blackwell.

Toledo, O.—The Shifley & Burdick Co. has been incorporated to manufacture and deal in Hardware. The capital stock is \$15,000 and the incorporators are J. J. Shifley, L. F. Burdick, C. A. Peckham, Marguerite T. Shifley and Joe Richmond Burdick. The company has been carrying on business at 2011 Adams Street.

Worcester, Mass.—The Worcester Mfg. Co., which will make the Burnham window shutter, has organized under the laws of Maine and elected the following officers: President, Jerome Marble; vice-president, John W. Knibbs; treasurer, George M. Rice; secretary, William Lancaster; board of directors, these officers and Frank E. Powers, Phineas L. Rider and Clarence L. Burgess; general manager, John W. Knibbs; executive committee, John W. Knibbs, Jerome Marble and George M. Rice. The capital stock of the company is \$150,000.

### Changes and Improvements.

Avondale, N. J.—The Imperial Cutlery Co., which recently purchased the Castle Silk Mill property, has broken ground for an addition 190 feet long and 40 feet wide, one story high, and so arranged that additional stories can be added when required. The work will be pushed as rapidly as possible.

Adrian, Mich.—The Economy Stove Co. of Somerset Center has decided to locate in Adrian. The plant will be in operation in about sixty days.

Ellwood City, Pa.—The Hartman Mfg. Co. is arranging to erect a rod mill adjacent to its present plant within the coming Summer. The rod mill plant will provide more material than the present works can draw into the wire needed for wire fencing and specialties made, and the over-production will be converted into wire nails.

Fulton, N. Y.—The Hunter Arms Co. anticipates the extension of its manufacturing interests and has acquired the property north of the company's buildings from Thomas D. Lewis, and as soon as arrangements can be made the plant will be extended. It is stated that the extension which will be made to the plant will almost double its capacity, and will add greatly to the number of hands employed by the concern.

Hartford, Conn.—The Capewell Horse Nail Co. will at once build a brick addition to its present plant on Charter Oak Avenue. The new building will be of brick, 139x42 feet in size, one story high, and will be used for storage purposes. It will be built south from the east wing of the present factory on Charter Oak Avenue.

Joplin, Mo.—Excavating has been commenced for the building of the Renfrow Paint Co. on East Fourth Street and will be hurried to completion.

Little Falls, N. Y.—A brick addition is being built to the Cheney Hammer Factory on Mill Street, which will be used as a grinding room and storehouse. It is being erected over the raceway, heavy steel girders being laid across it for the structure's support. When completed, the grinding capacity will be double its present capacity.

Minneapolis, Minn.—The American Radiator Co. has decided upon a location for the big warehouse which it is going to erect in this city, and has had the ground surveyed for a building 100x220 feet at the corner of Eighteenth Avenue and Second Street, N.

Newark, N. J.—The New York Knife and Razor Co., incorporated under the laws of the State of New York, have had recorded in the register's office a deed of the property of the Electric Cutlery Co., which had been sold April 1 to the New York concern.

New Haven, Conn.—The National Wire Co., whose plant in Fair Haven was destroyed by fire last Winter, has placed a

force of about 75 men at work clearing away the debris of the burned factory and making preparations to begin work on a new and large establishment.

Owatonna, Minn.—The Washington Tool Co. has reorganized and increased its capital stock from \$20,000 to \$50,000.

### Recent Embarrassments.

Cleveland, Ohio.—The Horix Mfg. Co., manufacturers of Hardware specialties, and capitalized at \$50,000, has been placed in the hands of a receiver on the application of a local foundry.

### Recent Fires.

Cleveland, O.—The tinning house and pickling department of the Avery Stamping Co. were destroyed by fire on the 30th ult. The company advise us that there will be little, if any, delay in the prompt shipment of their goods, as they have built temporary structures, and both departments are again in operation.

Dallas, Tex.—The establishment of the Southern Rock Island Plow Co., in this city, a six-story structure about 100x100 feet in size, has been burned. The loss is roughly estimated at \$250,000. Fire Chief Swingley estimated the damage to the stock at \$50,000 and to the building at \$20,000.

Lowell, Mass.—The Fifield Tool Co.'s plant has been burned. Loss will probably exceed \$200,000.

### Miscellaneous.

St. Johnsbury, Vt.—At the annual meeting of the stockholders of E. & T. Fairbanks & Co., the scale makers, the following directors were elected: Samuel N. Brown, of Boston; Henry Fairbanks, of St. Johnsbury; William Storrs Wells, of New York; Charles H. Morse, of Chicago; Hiram N. Turner, John C. Clark, Frank H. Brooks, all of St. Johnsbury. The directors organized by electing Mr. Brown, president; Mr. Fairbanks, vice-president; Mr. Clark, secretary and treasurer; Mr. Turner, manager. The directors and officers are the same as last year.

Williamsport, Pa.—At the annual meeting of the Williamsport Iron and Nail Co. the following officers were re-elected: President, C. La Rue Munson; secretary, John R. Scheyer; John M. Young, treasurer.

## Polygon Conductor Pipes Won't Burst.

The twist in the corrugation checks the sudden fall of ice and water, thus protecting the joints. It stands hard knocks because it is corrugated. Again, it is much handsomer than plain pipe. Made in copper and galvanized iron.  
 Catalogue and information free.

**STUBER & KUCK,**

Peoria, Ill.

## PRICES CURRENT.

The prices noted in this Prices Current are intended for the Hardware trade only, and for such quantities as are usually purchased by retail dealers. They are carefully revised and represent quotations at which purchases can be made. Very small quantities, and broken packages, frequently make higher prices necessary.

Subscribers are requested to notify us of any discrepancies, as we desire to make this department of our paper worthy of their constant attention.

The list prices, from which discounts are given, will always be furnished the dealer upon request, by the manufacturer quoted.

## THE O K LAWN TRIMMER.

SIMPLE, DURABLE, EASY TO OPERATE.

The O K Lawn Trimmer is the only practical implement of its kind, and is needed by every one who has a Lawn or Stone and Cement Walks. It cuts out a V shaped strip of sod along the walks which can be taken up like a piece of rope, leaving no dirt, as it cuts the sod without tearing it. A lawn requiring several hours hard work by the old method can be trimmed with the O K Lawn Trimmer in a few minutes. The blade, or cutting part, is stamped out of steel, and the handle is of hard wood, making a nice appearing as well as an indestructible implement.

**ALFRED FIELD & CO.,  
93 Chambers Street, New York.**

**WHY IS THE**

**O.K. THE BEST ROTARY  
WASHING MACHINE?**

**BECAUSE**

- 1.—It is the only Rotary washer that has Revolving Steel Ball Gearing, reducing the friction and thus making machine so light running and almost noiseless.
- 2.—The tub is made of Louisiana Red Cypress Lumber, cherry finish; the legs are solid with tub (not removable, breakable legs fastened with screws).
- 3.—The wheel turns right or left, pin wheel or dasher reverses automatically, turning the clothes back and forth through the hot soap-suds, and cleaning them without rubbing them to pieces.
- 4.—This washer is made by experienced mechanics, and will out-last any other washer on the market.
- 5.—The tub has a wringer box fastened with steel brackets.
- 6.—The lid on tub closes tight, no escape of steam.

# HARDWARE

Coleman Hardware Co., Chicago, Ill., have disposed of their entire toy business to the Arcade Mfg. Co., of Freeport, Ill., who have purchased everything in the line of toys that have been counted among the product of the Coleman Hardware Co. As the Arcade Mfg. Co. is a large and well-known concern, no fear need exist but what they will take every possible care of such orders as were formerly given to the Coleman Hardware Co.

H. F. Brammer Mfg. Co., Davenport, Iowa, whose important line of washing machines is familiar to the trade, state that at the present time they are overwhelmed with orders for their popular O. K. Washer, they never having had such a succession of them since they commenced business. They have reason to believe that this indicates a prosperous condition of the country, enabling the purchase of labor-saving appliances calculated to make the domestic drudgery no longer a matter of dread.

At the Grand Rapids Furniture Exposition, which will shortly take place in the Shepard Block, Grand Rapids, Mich., the National Sweeper Co., of Marion, Ind., intend displaying a full line of samples of their goods, having an excellent location on the ground floor. They anticipate being ready to show their new line of superior toy and special size Sweepers in addition to the one with which the trade is already familiar.

Fletcher Hardware Co., Detroit, Mich., under date of June 1st, announce a new departure, which may possibly be followed up by others. They state that from the date mentioned until further notice they will pay charges on all telephone and telegraph orders for goods which their customers may favor them with, their desire being to give all such orders prompt shipment the same day as received. Under such improved auspices they solicit, with confidence, a fair share of the mail orders of their customers.

Sargent & Co., 149-153 Leonard Street, New York, showing their Gem Food Chopper, issue for the use of dealers a set of three illustrated display cards  $17\frac{1}{2} \times 9\frac{1}{2}$  inches. On both sides of the card are printed apt sentences displayed in large type, and designed to catch the eye of housekeepers and others, one of which is as follows: "It won't chop wood; but Sargent's Gem Food Chopper will chop raw meat, cooked meat, vegetables of all kinds, fruit, crackers, bread, cheese, nuts, figs and other foods."

Arthur A. Miller, who has had fifteen years' experience in the Hardware and House Furnishing Goods trade, and was formerly in the employ of Charles Weiland, New York City, has associated himself with William Kline, who has been prominent in the same line of business in New Orleans, La., and they have organized the Metropolitan Hardware Co., with store at 407 Magazine Street, New Orleans, La. Mr. Miller having been doing a jobbing trade for the past year or two, organizes the new concern to push that trade exclusively. The company state that they receive job lots and goods from auction daily, and will shortly issue a catalogue. They have opened a New York office at 85 Warren Street.

The Tiptonville Hardware and Furniture Co., of Tiptonville, Tenn., have added Warren Hardware Shelving to their fixtures for the better and quicker handling of their goods.

George R. Benjamin, who for the past seventeen years has represented the firms of M. Hartley Co., Remington Arms Co., and the Union Metallic Cartridge Co., has connected himself with the Eastern Department of The Peters Cartridge Co., 80 Chambers Street, New York City, and will represent them on the road.

At the annual meeting of the stockholders of E. C. Atkins & Co., Indianapolis, Ind., held May 22d, 1901, the following officers were elected: President and Superintendent, Henry C. Atkins; Vice-President and Secretary, N. A. Gladding; Assistant Secretary, J. W. Perkins; Treasurer, M. A. Potter; Assistant Treasurer, A. D. Gates; cashier, F. C. Gardner. Directors, Henry C. Atkins, M. A. Potter, N. A. Gladding, A. D. Gates, T. R. Kackley.

Henry C. Atkins, the new President, is the son of the late Elias C. Atkins, and has been Vice-President and Superintendent at the head of the manufacturing department for the past six years, so that he is fully equipped for his new position at the head of the company.

The Ericsson Telephone Co., 296 Broadway, New York, manufacturers and importers of Telephone Switch Boards and Telephone Supplies, are distributing to the trade a series of photographic reproductions showing on a card  $14 \times 11$  inches the two factories of L. M. Ericsson & Co., in Stockholm, Sweden, and St. Petersburg, Russia, where the equipment is made. On the same card is also given an engraving of an Ericsson Multiple Switch Board, with a capacity of 10,000 subscribers in Copenhagen, Denmark, together with a similar view of the first portion of a switch board installed at Shanghai, China, which is deemed of interest because it employs native operators.

The unusual demand for the products of the G. Drouve Co., Bridgeport, Conn., who are large manufacturers of galvanized iron and copper cornices, skylights, ventilators and architectural sheet metal work generally, has made it necessary for them to increase their plant with a very substantial addition. The new building is  $51 \times 58$  feet in size, and two stories high, and as this doubles the capacity previously had, gives the company ample room for the transaction of their business. They are now established in the new building, in which increased facilities for storing stocks of sheet iron have been largely attended to, as well as more commodious packing and shipping facilities. The heavy machinery used for stamping the ornamental sheet iron work, as well as the heavy cornice brakes, made necessary in this part of the business, are confined to the first floor of the old building, an elevator  $6 \times 14$  feet in size being used to carry stock to the shop, which is on the second floor. This shop being  $58 \times 90$  feet in size, is lighted in a superior manner from the roof. The new building is of fireproof construction, in which sheet metal is largely used, special attention being paid in its erection to lighting and ventilation.

The output of watches in Switzerland last year was the largest ever recorded. According to statistics just published, the total exports amounted to 2,366,426 nickel watches, value \$4,064,000; 3,086,770 silver watches, value \$7,576,200; 800,258 gold watches, value \$8,144,600, and 6,769 chronographs and repeaters, value \$260,800.

The Circulation of "Hardware" is Larger Than That of Any Other Paper in the United States Devoted Exclusively to the Hardware Trade.

## Editorial Trade Review.

The convention of the Southern Hardware Jobbers' Association at Asheville, N. C., last week took up considerable of the attention of the trade at that time, and the published proceedings will be looked for with interest by those in other sections of the country who were unable to be present. Many look forward to the enjoyment of perusing the many interesting papers there presented, on subjects of such vital interest to the well being of so important an organization as to demand the best opinions from those competent in the industry to prepare and present the same.

The annual intefest taken in the proceedings of these conventions of jobbers is of lasting benefit to the trade generally throughout the United States. The many questions on subjects of annually increasing importance that are regularly brought forward, commented upon and discussed by each branch of the trade, the manufacturers or their natural distributors the jobbers, enables these two important bodies to come closer together, settling amicably many points on which they may have been at variance, and agreeing upon terms which form a substantial basis that becomes general with all the trade. In this way all friction is removed emanating from a lack of profit on some lines, a careful elucidation of the reasons why changed conditions should ensue follows, and all of these features and many more make the paths of business, the commercial highways, more open to travel and give an element of pleasantness to the arduous prosecution of a business so full of detail, travail and trouble, that we reap pleasure and enjoyment only out of its successful development.

The regular season for any special volume of business to be looked forward to, is rapidly drawing to a close. The salesmen are finishing up their traveling programmes, and are veering towards home and household joys with the hope of staying within reach of them for a month or more, possibly taking a needed rest among green fields that stimulate restful conditions by scenes varying entirely from their usual surroundings.

Vacation programmes generally are being formed, as the pushing demands of a successful season become less noticeable, and an opportunity is given to look through stocks and study over the few mistakes which possibly show up, when investigation has brought them to the front. The season generally is reported as having been a fairly satisfactory one. The volume of goods distributed has been in excess of previous seasons to a large degree. Profits have been somewhat less than were anticipated in some particulars; unchecked competition does its share usually in preventing the gathering of too great an amount of this enjoyable fruit of an active season's trade. But the stocks remaining for future distribution are not excessive in the way of specialties suitable only for the season just passed through.

There is noted a lessening demand for the tools needed by mechanics in the industries now enjoying the uncertainties surrounding strike conditions. But this causes little fear as having reference to Fall trade, the state of business being otherwise in excellent condition, with collections in satisfactory shape, and few indications of any great embarrassments of a financial character.

## Learn to Talk.

The Hardware clerk, to be a success, and to rise above his clerkship should learn to talk. Making a noise with the mouth is not talking, nor is a volubility of words talking in the sense in which the clerk should be proficient. The press is looked upon as the great educational agent of the age. The writer has had experience and gives it as his honest belief that the clerk behind the counter can give the press points and win if he will.

Much has been said, and more written, about the clerk devoting his energies to the interests of his employer, and many ways have been pointed out in which this is to be done. Punctuality, cleanliness, politeness, secrecy, all have been amplified, but beyond the mere statement, "Learn to talk your goods." No one has yet taken up this most important point.

The writer remembers a trip through a department store not long since and stopping at the counter where several baskets of pocket knives were displayed, presided over by a frowzy young female who had evidently seen better days—and worse. She had a far-away look of late hours and many dances and was vigorously reducing to its least possible use a mouthful of "Beaman's" (no charge for the ad.). As I picked up one of the knives, the houri shot out at me with the ping of a Mauser: "Twenty-five cents." I laid it down and picked one out of the other pile. Again came the artillery charge: "Thirty-five." To test the young person's fitness for the position, I asked: "What is the difference between these two knives?" Short and sharp came the answer, as she gazed out through the door, across the street, and no telling how much further: "Ten cents." And the poor young thing was not even conscious of her wit.

Now, it is a deplorable fact that there are too many such clerks, male and female, and employers, tired of trying to get good clerks, have adopted pretty generally the method of hiring anything that looks decent, at the lowest price, and keeping them no longer than necessity compels. Such clerks are clerks, or less, forever.

The ideal clerk will seek to so acquaint himself with the goods he handles that when a customer asks the reason for a higher price the reason can be given intelligently and simply, the advantage pointed out and explained and the necessity for higher cost made clear. Notwithstanding the impression which seems to prevail, the American people do not want cheap goods. They are willing to pay a fair price for a good article, but usually, because they do not see the difference in quality, they accept the cheaper as incurring the less risk. Some of the most successful concerns in this country have attained their success by freely claiming they made only goods of the highest cost and consequent good quality and that in price they did not compete for a moment. This shows that if the people can be assured of good or best quality, they will pay the better price. Now, it needs no argument to show that the best profit is made from the best goods, and the clerk who sells ten shovels at \$2 each is worth twice as much as he who sells twenty at \$1 each. In the one case the clerk probably knows how to talk. He probably knows how to show to his customer wherein he will be the gainer by paying double the price of the cheap article, and save money in the end. And that clerk will be retained without diminution of salary in dull times, and promoted when times are good, while the clerk who is busy from morning until night selling hundreds of things, the profit on all of which will hardly more than pay his salary, will be dropped from the roll as soon as his services can be dispensed with or replaced.

This brings us back to our title: "Learn to talk." Do you know, positively, why the articles you are selling cost more than others across the way which seem to be the same? It is all well enough to talk to your customer about better quality, job lots, seconds, etc., but can you honestly tell a truthful reason why you should get more for your razors or shears than your competitor Smith asks? Even at the same prices, can you give your customer an honest and intelligent reason why he should buy of you? He may ask for something cheaper; certainly, let him see it, but do you know yourself why it is cheaper, and can you convince him that it is cheaper only in first cost and that by paying a little more he is really saving money. Out of every hundred customers you can, if you know your business as you ought, do this with ninety-nine customers, and they will thank you for it, and come to you when they want something else, while the hundredth man will feel that you "stuck" him, or made him appear cheap himself and next time will go somewhere else. Clerks are made; no man was ever born a *salesman*. And of making salesmen, like books, there is no end. Suffer me to tell you one way.

Study the technical part of your business and its technical literature. Not the least, study the descriptive catalogues and circulars. Every manufacturer publishes volumes of matter every year telling about the special points and advantages of his products, and pointing out at length and with minute care wherein he believes them better than those of other makers. If he has improvements, or features so protected by patents that none other can use them, these facts are clearly set forth, with the peculiar advantages secured by such features. It may be a machine which turns out perfectly what others do only fairly or indifferently. It may be an article made from material especially adapted to its proposed use. Such information the makers are not only willing but anxious to furnish, and the clerk who is alive to his own interests will see to it that he is familiar with all claims to consideration put forth by the manufacturers of the goods he handles. A postal card will bring you full information, and if you cannot get that which you are seeking, write to the manufacturer and ask him to tell you wherein his products possess points of merit over those of other makers.

When circulars are received, don't throw them into the waste basket until you are sure they do not relate to any goods in the store. If they do, read them carefully. No mat-

ter how trivial they may seem they may contain some point, a knowledge of which will raise your salary. Don't think that what does you no good does harm. On the contrary, what does not harm you is for your good to know. It is the general knowledge of many things, some of which are remembered but once in a life time that makes the successful man of rapid thought and quick decision. Thinking is only a correlation of facts previously learned.

Again read papers treating of the use of the goods you handle. He who sells goods need not be expert in their use, but he should know just how they are used and be familiar with directions tending to correct use of them.

Do you know that one-half the locks in the country are applied wrongly because of ignorance, and the makers cannot reach everybody to tell how they should be applied? Pin tumbler locks are commonly found up side down, and the lock gets "cussed" instead of the idiot who applied it. For instance, here are two revolvers, both .38 calibre, both automatic, hammerless, and equal in finish; they are same size, and the name on one is worth no more than the other. And yet there is a difference of \$5.00 in price, and it is well worth it. Can you tell why? If not, how do you expect you could sell the higher-priced one against your neighbor with the cheap one?

You may say this takes too much time. Then throw up your job and let some one have it who is more deserving. It is such as you that remain clerks while the office boy of to-day in a few years buys out the store and hires you for less than you get now. The reason there are no more intelligent clerks is that the intelligent clerk soon ceases to be such and becomes manager and owner. Don't think luck against you. You are against luck. Luck is only a combination of brains, persistent effort and a determination to win. Be a master of your trade—it costs so little. Know your way and seek ever to know it better. By so doing you will render it unnecessary that you should ask for advancement; it will come of itself, and there is no limit to your success. Refuse to do it and be ever at the tail end, but don't say I didn't tell you.

F. A. SOUTHWICK.

### A Tinker's Dam.

The Classical Dictionary's definition of the much used word.

A great many people believe that this expression comes from the dam of putty or clay that a tinker uses to restrain his molten metal from overflowing and which is thrown away when his work is completed.

This is altogether an error. "A tinker's dam" is equivalent to the expression, "A continental dam." The latter expression arose when Continental money had become as utterly worthless toward the end of the Revolution as the Confederate notes did at the end of the Civil War. In a "Classical Dictionary of the Vulgar Tongue," London, 1796, a dam is defined as a small Indian coin, mentioned in the Gentoo code of laws; hence the etymologists may, if they please, derive the common expression, "I do not care a dam!" i. e., "I do not care a farthing for it." And a dam is the smallest Hindu coin in circulation, like a Turkish paper piastre or a Portuguese milreis, the one-thousandth part of a dollar or a French centime, one-fifth of a sou, used in making up accounts, but a coin rarely if ever seen in circulation.

A Hindu tinker is a pariah, the lowest caste, an outcast. For a higher class to touch what a pariah has touched is pollution; consequently a "tinker dam" is a monetary token almost valueless in itself and utterly worthless by being polluted in passing through a tinker's or pariah's hands. Sometimes this expression is spelled "tinker's damn," and it has been stated that the French say "damn." But both are errors. The French oath, sounding like damn, is *dame*, very common. This is said to be the misuse of *Dame*, abbreviation of *Notre Dame*, although respectable dictionaries interpret it as an exclamation to denote surprise, as "Bless me! Forsooth! Marry!"—*American Notes and Queries*.

## LEGAL CORRESPONDENCE.

Conducted by William Marston Seabury, Attorney and Counsellor at Law,  
No. 43 Cedar Street, New York.

Any subscriber to "HARDWARE" is privileged to ask any legal question he pleases in this Department and it will be answered free of charge. Address all communications to Editor "HARDWARE," No. 277 Broadway, New York City.

## Loss of References—Damages.

**QUESTION:** About a year ago I took a position with a house as traveling salesman. When I was employed I was informed by the head of the firm that it was their custom always to require of their employees that they should deliver their letters of reference to the firm during their employment. I was assured by the head of the firm that they would be perfectly safe and that they would be kept in the firm's safe deposit vault. I therefore delivered all my letters of reference and recommendation, which covered fourteen years of my business life, to the firm for keeping in accordance with their rules. Many of the letters I had recommended me most highly and were from men of prominence, many of whom are now dead, so that it is impossible for me to replace them. I recently decided to leave this firm, but when I wrote to them requesting them to return my papers they wrote me a letter stating that the papers had been lost and that they did not know where they were. Kindly inform me through your legal column whether I have any redress.

**REPLY:** We are of the opinion that you have a cause of action against this firm for damages resulting from the loss of these valuable papers. The deposit of the papers with this firm under their rules and explicit instructions constituted a bailment in which they made themselves responsible to you as bailees at least for ordinary care of the papers so deposited. If, therefore, they failed to exercise due care in keeping these papers they are liable to you in damages. We consider this to be a case where, under all the circumstances, the loss of the papers is in and of itself negligence on the part of this firm, and that you would make out a prima facie case against this firm by proving the delivery of the papers under the circumstances named and by proving their loss. The burden would then be upon the firm to show that they had exercised reasonable care in the keeping of the papers named.

## Partnership—Liability of Retiring Partner.

**QUESTION:** Some time ago I was the member of a firm. We had a very good trade, but my partner did not attend to business and things began to go to pieces. I therefore left the firm and started in business for myself. Some time after this I received a letter from a very large creditor of the former firm stating that he looked to me for payment of his claim and that he had already placed the matter in the hands of his lawyer. This creditor had done business with the firm before, but the debt for which he seeks to hold me responsible was contracted after my retirement from the firm. Kindly inform me whether I can be held legally responsible for this debt incurred after my retirement from the firm.

**REPLY:** When a partner retires from a firm, if he wishes to relieve himself of further responsibility to subsequent customers of the firm he should give notice of his retirement. In a case where a customer has been in the habit of dealing with a firm the obligation on the part of the retiring partner to give notice of his retirement in order to relieve himself of further responsibility is even stronger. In *Banker Contracting Co. vs. Scribner*, 99 St. R. 444, a case recently decided by the Appellate Division of New York Supreme Court, Judge Patterson said: "The rule is well settled in the State of New York that actual notice of dissolution must be given to those having had previous dealings with the firm, and in default of such notice, the retiring member remains liable to subsequent dealers with the firm if such dealers were ignorant of such withdrawal." If, therefore, it can be proved that you never gave actual notice to this customer and that he had had dealings with your firm while you were a member of it he could hold you responsible for the debts of the firm incurred after your retirement.

## Avoidance of Inheritance Tax.

**QUESTION:** I have been told that if I do not make a will my property will be subject to a tax before my relatives receive it. Can I avoid this tax if I make a will, and if so, how? Kindly also inform me what is the amount of the tax.

**REPLY:** You cannot avoid the inheritance tax on your property simply by making a will, as the law applies to legacies bequeathed in a will as well as to property distributed in a case of intestacy. It is, however, often possible to avoid this tax. The law only taxes gifts or bequests and for this reason if it appears from the will that the sum to be given to a person is the fulfilling of a legal obligation the sum of money will not be taxed. For this reason, if for no other, people often make a will. The inheritance tax is of two kinds, direct and indirect. The direct inheritance tax applies only to personal property and is a tax of one per cent. upon the amount of the decedent's estate if the estate amounts to the sum of \$10,000 or over. This direct inheritance tax applies only to very near relatives, such as father and son, and brother and sister, etc., and each beneficiary of the estate bears his or her proportion of the tax, according to the amount received. The indirect or collateral inheritance tax, as it is sometimes called, applies to both real and personal property, and is a tax of five per cent. on all estates of the value of \$500 or over. This tax attaches to property given to persons (roughly speaking) who are more remotely related to the deceased than nephews and nieces. If you wish to avoid this tax, you should consult a lawyer, and it is very probable that he could arrange matters satisfactorily for you.

## A Prosperous Block Company.

The Boston and Lockport Block Co., with factories at Boston, Mass., and Lockport, N. Y., write us that the sales for the first four months of the present year are leading any previous four months that their company has known since their organization. They note that one good indication of the "full dinner pail" times is the fact of the large increase in special blocks and trucks, such as are used by railroads and large contractors and manufacturers for the handling of unusually large burdens. All these things indicate clearly that almost every department of business is taxed to its utmost capacity in handling an unusually large business of more than ordinary dimensions. The export trade has also been well maintained, and in some markets is unusually good. The labor trouble now on affecting machinists does not affect the block business of the above company in the least, since a change was anticipated about a year ago, giving their men a nine-hour day without a corresponding reduction in wages. The principal thing complained of is an occasional delay in getting their supplies with ordinary promptness. This is attributed in some measure to the fact that being confined to a few mills and manufacturers whose product they have used for years, they take the least possible chances of receiving metal stock not quite up to standard that is required for the special and extra heavy work that they turn out. Page 105 of their 1900 catalogue shows a test made at the Watervliet Arsenal of the comparative strength of hooks and shackles of different brands of iron, which will be found of great value to any interested party. These catalogues are mailed free on application. Send for one.

## Capital Invested in Electrical Enterprises.

The amount of capital invested in electrical enterprises in the United States to-day may be estimated at about \$4,000,000,000, of which about \$1,200,000,000 represents the electric lighting industry, \$1,800,000,000 the electric railways, and \$150,000,000 electrical manufacturing plants. In nearly every case these investments have been increasing from year to year in an almost geometric ratio. The number of persons employed in electrical work of all kinds in the United States is estimated to be more than half a million.—*Ex.*

## CONSULAR COMMERCIAL COMMENTS.

### TRADE METHODS IN GERMANY.

I am constantly in receipt of letters, catalogues, etc., from our manufacturers and export associations, wishing to introduce American goods into this district and requesting the names of reliable purchasers. Inquiries are made by this office and information is promptly given.

In order to find out whether my work had led to satisfactory results, I called of late on some prominent merchants here, and, while it gave me pleasure to learn that my endeavors had been partly successful, I was told that our exporters are at fault in some respects. It is for this reason that I submit the following as the most interesting part of my interviews, to serve for the information and guidance of our shippers.

In the first place, it is admitted that our manufacturers excel in variety, beauty of style and adaptability all others, wheresoever made. Letters, circulars, catalogues, etc., in English, are, however, of almost no value, and those who desire to secure this market for their goods must pursue the methods that are principally used here. The most effectual means would be the canvassing of every city and town by intelligent agents with samples of the goods they sell, and with full knowledge of every detail of their special lines, so as to give all information desired. A careful study could in this way be made of the tastes and peculiarities of the region, and full particulars of the requirements of this market could be sent home. Moreover, careful inquiries could be made with regard to financial standing of buyers.

My attention was also called to the disinclination of many of our manufacturers to adapt their fabrics to the habits and tastes of other countries. They are averse, it seems, to deviating from their usual sizes, forms, etc., though it would seem that when a new market for certain articles is to be acquired, the goods should be made to suit the wishes of the purchasers.

Moreover, it was said that American manufacturers are often anxious to make large sales at the start, without considering that new articles can be introduced to consumers only by the expenditure of much patience and perseverance.

Great fault is found with our terms of credit. While the business in this country is mainly done on terms varying from three to six months' time, our merchants insist in many cases on cash on delivery and even before delivery, so that receivers are unable to examine goods before payment and can not know whether the shipments are in accordance with orders or not. Of course, the demand for cash on receipt is well justified if the purchaser's financial standing is of a questionable nature; but I know of first-class German houses that have been subjected to the same rigid terms, causing a discontinuation of purchases and material losses to our trade.

### EXPORT TRADE NOTES.

An American merchant, who has during the past three years conducted a very successful depot in a German city for the sale of miscellaneous American manufactured goods on commission, writes as follows concerning some of the minor difficulties which he has encountered in the course of his business:

In the first place, there are so many experiments, hit-or-miss trials of goods by people who know nothing about conditions here or the requirements of the German market, that a good deal of stock has come over on trial and is later thrown on the market and sacrificed when the experiment has proved a failure.

Secondly, as soon as one has found a line which will sell,

and has got a trade established, our American friends will make improvements in that article until the improved goods hardly look like the originals, while the stock here becomes, as a result, depreciated and often valueless.

Then, there is the difficulty with the German custom-house. One can not count from one shipment to the next one and know certainly that the latter will be classified as the former was or the samples were. It has happened to me frequently of late that goods which originally came in at 10 marks (\$2.38) duty per 100 kilograms (220.46 pounds) were found to belong under a much higher classification, viz, 24 marks (\$5.71) per 100 kilograms, as soon as the importations reached any important volume. All these are points concerning which American exporters should be much better informed and which they should take into account in dealing with their agents or purchasers in Germany.

FRANK H. MASON, Consul-General.

BERLIN, May 4, 1901.

### RUBBER AND GUTTA-PERCHA.

A lecture on rubber and gutta-percha was recently delivered before graduates of the Amsterdam Trade School by H. A. Berkhout, formerly forester in the Dutch East Indies and now teacher in the agricultural school at Wageningen, Netherlands. From this address I paraphrase the following, data remaining intact:

The quality of elasticity and of returning after stretching to its original form distinguishes rubber from gutta-percha, whose form is susceptible of easy, permanent change. Both are impervious to water and are bad conductors of electricity. Mixed with carbon and vulcanized by the addition of sulphur, gutta-percha is largely used in the making of telegraph cables as an insulator in which the cables are imbedded. Gutta-percha is the product of one plant, while rubber is derived from over sixty plants. Three-fourths of the gutta-percha commercial product comes from Sumatra and Borneo, although, like tin, it is shipped from Singapore and not from Batavia.

The total world production of rubber may be estimated at 45,000,000 kilograms (99,207,000 pounds), of which nearly two-thirds comes from the Amazon Valley, one-third from Central Africa, and one-twentieth from Asia. The exportation from the Indian Archipelago is of slight influence upon the trade of the world. Most of the rubber produced is imported at North American ports. Liverpool imports more than all other European ports combined.

Rubber imports at Amsterdam ranged yearly from 1890 to 1898 from 9 to 34½ tons. Last year, although prices were good for all sorts, the arrivals from the Dutch colonies amounted to only about 17 tons. The importation at Rotterdam has fallen markedly while at Antwerp it has risen; the fall at Rotterdam from 1890 to 1893 was from 591 tons to 242 tons, while the Antwerp imports rose from 5 tons to 2,014 tons, caused by improved conditions in the Kongo Free State. Rotterdam imports from the east and west coast of Africa fell from 363½ tons in 1894 to 259 tons in 1898.

The cultivation of gutta-percha is not advisable on a large scale, as the tree is grown with difficulty and the native cuts it down to get the product. Gutta-percha is now extracted from the leaves of the tree as well as from incisions in the trunk. The total production in the world is about one-twentieth that of rubber.

FRANK D. HILL, Consul.

AMSTERDAM, March 28, 1901.

### The Evolution of the Sewing Machine.

The evolution of the sewing machine may not be a proper expression and yet, comparing the sewing machine and the sewing machine business of, say, fifty years ago with that of to-day, we must of necessity admit that there has been a great evolution; for back in those days the sewing machine was a novelty; in later years it became a luxury, and to-day it is a necessity. As late as 1846 Elias Howe was having much difficulty trying to convince the public that he had a device with which he could do more and better sewing in a few hours than a woman could do by hand in as many days; and it was not until along about 1850 that much, if any, progress had been made in the perfecting of the sewing machine. There was, in those days, also, much opposition to overcome, not only from the skeptical, but from the workers themselves; and it is said that several years later a riot was almost precipitated in Cincinnati, Ohio, by the introduction of sewing machines into the tailor shops.

After Elias Howe came Wilson and Singer, the latter, perhaps, being the more successful; though for years these three were the leaders, and from 1852 on there was a continuous struggle for supremacy. Sewing machines were first sold by placing them on exhibition and inviting the public in to see and buy, but this method soon became too slow for the enterprising sewing machine man, and the canvasser was introduced and started out to find new customers. This necessitated other methods, and it was but a short step from the selling for cash to the monthly payment plan. The canvasser with his wagon and machine soon became a familiar sight, not only in the town, but on the country highways as well, and to-day there are many of the old-time canvassers living who can "a tale unfold" of how they beat the other fellow in a sale, and of the great times they had at the county fair, and of the "Blue Ribbons" they secured for the best machine.

During the years from 1850 to 1876 many sewing machines were invented and companies organized, some to fail, others to succeed. Among those to succeed was the Domestic, the first patents being issued in 1863, and a company organized about 1868. In 1871 General Offices were established in New York City and a Factory started in 1873 at Newark, N. J., where it still remains. The introduction of the Domestic with a high arm marked a new era in the style and shape of sewing machines, as up to that time all machines were of the low arm pattern.

The method of selling, however, remained the same until 1876, when a radical change was made in the price by some of the leading companies offering a reduction. This introduced the dealer into the business, though it took years of effort on the part of the companies to overcome the fears and prejudices of the general merchants against selling machines. Gradually they came to see that they could sell from the store; of course, not at so high a price as the canvasser secured, and yet at a price leaving a fair margin of profit. And as they avoided the expense of horses, wagons, expert operators and teachers, they soon crowded the old-time canvasser and his picturesque outfit from the field. Besides, as sewing machines became better known, they became a greater necessity and customers did not depend upon the canvasser but called on the local merchant for a sewing machine as they would for calico, groceries or Hardware.

The increasing demand stimulated inventors and manufacturers, while competition forced improved machinery into factories, so that the same or better qualities of machines might be produced at less cost. During these years of evolution the "Domestic" was not only keeping up with, but in advance, of its competitors, until the word "Domestic" became a synonym of all that was best in sewing machines. It was popular with dealers because of its simplicity and wearing qualities. With the buyer, because it did all that a sewing machine could do. It was not necessary to follow

the sale up with a teacher to give instructions how to run the machine, nor with an expert mechanic to keep it in repair. All the operator needed to know was how to thread it and how to put the work under the foot; the machine did the rest. In fact, this was and is to-day the "Domestic." Through the entire line of machines manufactured by this company the leading features are simplicity and durability. An added feature to the present "Domestic," now the "New Domestic," is the looper or double stitch device, by which the machine makes both a lock and a chain stitch, combining a single thread machine with a double thread, and being, in fact, two perfect sewing machines in one.

This little device, so simple in construction and yet so unique in results, is shown in the cut below, and it is safe to say that no sewing machine in the market to-day has em-

DOUBLE STITCH DEVICE.

bodied these two features so perfectly and harmoniously as the "New Domestic." For certain kinds of work the single thread or chain stitch is, no doubt, most desirable; in fact, many ladies prefer it for all classes of work, believing it to be fully as strong as a lock stitch and more elastic. Yet where heavy work is required the latter is more generally used. The "New Domestic," with this device, does both classes of work, the change from one style of stitch to the other being a simple change from shuttle to looper, requiring no skill and only a moment's time. The thread need not be taken from the needle and a change of stitch from lock to chain being accomplished almost while the machine is in operation.

But in writing of this wonderful device and the "New Domestic" sewing machine I am drifting away from my subject. As machines became more simple in their mechanism and cheaper in price, it brought them within range of a larger circle of trade, and of the merchant dealers, the jeweler, the furniture store and the Hardware took most kindly to the selling of sewing machines. Especially was this true of the Hardware trade; whether because of their being more familiar with machinery or other reasons, it is rare now to find a Hardware store that does not carry one or more makes of sewing machines. A great many of the leading wholesale Hardware firms carry a machine under their own name and it is sold to their trade through the regular traveling man, and there is no reason why this should not be. Customers want sewing machines, and if a Hardware merchant will use the same discretion and care in buying and selling a machine that he does in buying and selling a stove or an axe, he will find that no branch of his business will pay a better profit on the investment of labor and capital. Within the past year the New Domestic Sewing Machine Co. has placed on the market several types of machines suitable for all classes of trade, and have now on exhibition at the Pan American Exhibition, in the Manufacturers' and Liberal Arts Building, Eastern Division, a full line of these machines, where they will take pleasure in showing them to any one desiring to buy one, or a thousand.

As the company do not manufacture anything but sewing machines, they are in a position to supply a dealer with a machine that will please him, both in quality and price, and are making an exhibit on these lines, believing the general dealer to be more interested in the selling quality and price of the goods he handles than in an elaborate display of art and fancy work.

A. R. CAHOON.

### Trade Journals as Salesmen.

The trade journal is a purveyor of news and information for the business lines in whose interests it is published. It covers its chosen field with an ability that is demonstrated by its success in keeping at it and is very often relied upon to furnish facts and information which are not otherwise obtainable. It goes to the place of business of its subscribers and is read because of the mercantile or trade intelligence that it conveys, being valued in exact accordance with the readers' ideas of what intelligence consists. Even the most unthinking readers, and possibly those who are thoroughly well posted in their particular lines of business, will admit that a very considerable amount of good can be obtained from any trade journal that has facilities for gathering news and is edited by men who understand what they are doing.

The functions of a trade journal are primarily to provide items of interest for its patrons and to consider such questions as concern them in their business, or to publish technical articles for the instruction and benefit of the trade. The news notes are valuable because they keep the business world posted, as do also the market reports. Editorial matter also has its value because of the suggestions therein contained. Most men of business like to know what others are doing and saying in matters either directly or indirectly connected with that business and they are not averse to hearing such opinions as are expressed on subjects that concern their own affairs. These opinions may differ from those entertained by a reader, but if their appearance in print causes him to think and he applies his thought to the betterment of his condition he will derive a benefit from the expressed opinions even if they do not coincide with his own views.

These functions, when well performed, are of great and decided benefit to the business world, but their work is not well done, nor can it be expected to be, without the aid of the advertisements. With all due deference to the men who collect and prepare the news notes for trade journals, and also to the writers on the editorial pages, I firmly believe that the men who write the advertisements are deserving of the greater credit when they succeed in attracting attention to the goods these advertisements offer. It is true that advertisements are not written in the office of publication, but are prepared under the supervision of those who have them inserted, yet this fact does not lessen the value of the journal but rather serves to increase it. Practically speaking, a trade journal is a medium for the transmission of trade intelligence and in this sphere of usefulness its value depends as much upon its advertisements as upon any other consideration.

An advertisement is nothing else than a salesman. Instead of going to a few buyers each week, it goes to as many buyers as the journal has subscribers and in each case makes its offering in a way that is intended to carry conviction. It pays its visits at stated periods, does not encounter any of the difficulties met with by salesmen, is always in a good humor and never aggressive, does not endeavor to run down a rival's goods, even though claiming to offer the very best, and is successful in the same degree that it is convincing. Such is the advertisement as it appears in and becomes a part of the trade journal.

I do not mean to say that the trade journal is a better salesman than the traveler, but I do say most emphatically that in each and every one of its functions it is an aid to the traveler in the introduction and sale of goods. It goes before him and carries the news. It introduces those whom he represents in cases where they are not known before, or has carried to the buyers information of what he has to sell. In short, the trade journal, in my opinion, is the advance agent of success for the traveler and gives him an opportunity which he could not find under any other conditions. I say this as a traveling man who reads his trade journals because he finds a profit in so doing, and the only criticism I expect to meet is from other travelers who fear that if they lay too much

stress on the value of printed matter as a salesman they may be obliged to seek some other occupation.

H. B. FORD, in *Stoves and Hardware Reporter*.

### Professional Courtesy in The United States.

No subject has received more attention, in recent times, in the technical and critical press of the world, than American competition. In all the arguments used to explain the pre-eminence of American engineering, one agency which has been overlooked, to some extent, is the growth of the splendid professional spirit which is characteristic of American practice to-day. One of the strongest evidences of this is to be found in the technical publications of this country, especially when comparisons are made with similar foreign publications. We use the term publication as inclusive not only of the periodical press, but also of the transactions of the scientific societies, as well as the various papers and books issued by the U. S. Government and others at irregular intervals. Any person whose observation extends over the field of current technical literature cannot fail to be impressed with the broad spirit which is displayed by the American engineer in the communication of facts and figures, gathered in his own practice, to his fellow workers. This is strikingly apparent, too, on personal contact with American and foreign engineers and manufacturers. Here offices and shops are thrown open to the visitor, often on slight acquaintance, and processes are described and permitted to be inspected in operation. Abroad, on the contrary, the visitor usually meets with closed doors and sealed lips, even when armed with the strongest credentials. If he is permitted to view a plant or process, he is usually escorted by some polite nonentity, who might as well be a deaf mute, so far as imparting information is concerned. There are notable exceptions, of course, but, speaking broadly, the conditions are as stated. If knowledge is power, then the methods adopted in America must be productive of material aid in the fight for commercial supremacy. Possibly the chief exponents of the dark lantern methods are the British engineers. Pick up a British engineering publication, and you are much more likely to find data and drawings of some American or Continental (European) machine or structure than of a British one. There will probably be some reproductions of photographs of British machinery, but no dimensioned drawings or data. Or, take the proceedings of a British technical society, and compare the number of actual working drawings and specifications contained in its volumes with those to be found in the transactions of similar societies on this side of the Atlantic. In no country is the art of talking and saying nothing so highly developed as in Britain, as a perusal of the discussions before British technical societies will show. Much of the credit for this professional spirit here must be given to the various technical colleges of this country, of which so many of our practicing engineers are graduates. It is noticeable among us, too, that the concerns that turn out the best work are those most willing to give out their experiences for the benefit of the profession and country at large. They have the consciousness of doing good work, and they are proud of it. In our special branch of engineering construction the influence for good in this direction of the U. S. Navy departments is very great indeed. In the detailed reports of the various bureau chiefs and publications, and publications of the different departments, there is a mass of data vastly more complete and educationally helpful than that which any other nation has made available for consultation. In matters of pure science or abstract reasoning, scientists of foreign nations are very generous in their contributions to the sum of "get-at-able" knowledge. It is not to this class that our remarks are intended to apply, but rather to those more directly concerned with the commercial side of engineering.—*Marine Engineering*.

Mrs. Meddergrass—I see by the papers that this here man Carneegy still wants to die poor.

Mr. Meddergrass—Humph! If a man is rich enough, he doesn't care whether he dies poor or not.—*Ex.*

### Enterprise Mfg. Co., of Akron, O.

Very few firms have experienced such rapid growth in so short a time as the Enterprise Mfg. Co., of Akron, Ohio, whose product of fish hooks and fishing tackle is exceedingly well known throughout the trade. They have lately been compelled to move their offices into a dwelling house located on their property and are now erecting a brick building, 105x40 feet, of two stories and basement, which is to be used as a wareroom to enable them to accumulate during the dull season a much larger stock of goods than they have had room for heretofore. This concern has been owned and operated by the present proprietors for twenty-one years, and enjoys the proud distinction of being the largest and most complete fishing tackle factory in the United States. They originally became prominent in the manufacture of Pflueger's Luminous Baits, which became an exceedingly popular specialty in the trade handling this class of goods, and have developed immense popularity. They since acquired the entire plant of the American Needle and Fish Hook Co., of New Haven, Conn., and removed the entire plant to Akron, Ohio, where they are now in position to supply all the various styles and sizes of fish hooks heretofore made by the above concern. They are continually adding new styles of hooks, and their present line consists of various styles in spear point and hollow point, ringed or flattened, japanned, blued and tinned; Limerick, Kirby, Carlisle, Aberdeen, Virginia, Black Fish, Kinsey, Bass, Mackerel, Kirby Sea, I. P. Cod, Central Draught Cod, Dog Fish, Halibut and Red Snapper, in all the standard sizes. They have greatly improved on the old methods of making this class of goods by adding much new machinery, which enables them at the present time to turn out hooks that are pronounced by expert buyers far superior to the goods heretofore imported from abroad.

### Piqua Bracket Co.'s New Catalogue.

Piqua Bracket Co., Piqua, Ohio, 1901 catalogue of 24 pages devoted to the exploiting of Baines' Patented Shelf Brackets, adjustable and fixed, designed for use in store rooms and dwellings. This article to the exploiting of which this catalogue is devoted, is an improved product, which in its use forms a new and complete system of shelving. It is adapted to all kinds of business, and to almost every position where a shelf or shelves may be needed in stores and dwellings. It consists of two parts, a standard, or wall bar or plate, and the bracket. The shelf brackets rest upon the upper side or sole of the adjustable bracket, the head or lug of which enters the standard bar. The standard bars are cast in sections of two feet, and half sections of one foot form the standard of any height wanted. Stops for the bracket to rest on are cast on the interior back, one inch apart, which allows for the bracket to be set at any point between the top and bottom of the standards. It is claimed that this improved system has many great advantages over old methods, some of which may be mentioned: First, the shelves are free from obstructions of props among or in front of the goods, thus forming a clear, continuous line the entire length of the shelf section, and this would seem to be a very desirable method for the proper arrangement and best display of Shelf Hardware or other things requiring to be shown in this way. An idea of the several parts necessary to form this can be obtained from their advertisement on page 69, in which illustrations are given of the separate parts. While the greater portion of this catalogue is given to the description of the adjustable bracket, the company also make practical display racks of unique design, illustrations of which are given in this pamphlet, showing the various useful ways in which they may be made completely serviceable. This is a good catalogue for the Hardware dealer to send for, and keep posted on the appliances so useful in the display of his goods.

### Warren's Scythe and Axe Stand.

J. D. Warren Mfg. Co., Masonic Temple, Chicago, Ill., having constantly in mind the importance of adding to the equipment of a Hardware store with a view to increasing its sales with the least possible labor connected therewith, have recently brought out the desirable article of which we give an illustration, which is called Warren's Scythe and Axe Stand. It is a well-known fact that scythes, grass hooks and scythe stones form a line of goods that most merchants find it extremely difficult to display properly at the season of the year when they are especially in demand, and any prominent method that will quickly attract the attention of buyers is worthy of being added to the equipment of the establishment. The peculiar shape of scythes and grass hooks keeps them too frequently relegated to the rear of stores during the selling season. Frequently sales are lost that might have been

WARREN'S SCYTHE AND AXE STAND.

made could they have been advantageously placed in sight in a more prominent manner. By the use of the Scythe and Axe Stand, to which we are calling attention, this feature is easily made possible, as the article may be placed in almost any location in the store and present a trim and neat appearance even when filled with the goods described. They are made in a neat, attractive and strong manner, and are designed to serve for axes, wedges, etc., during the Winter, in addition to being so advantageous in displaying scythes and scythe stones in the Spring and Summer. It is designed by the manufacturers to be placed before the dealer at a moderate price, and they will be pleased to give further information regarding the same upon request of any dealer desiring to add this to his fixtures.

### Over the 'Phone.

"Hello!"  
 "Hello! Who is this?"  
 "Mr. Lloyd of Riverside. I want to ask if——"  
 "Mr. who?"  
 "Lloyd."  
 "Can't make it out. Say it again."  
 "Lloyd—Lloyd."  
 "Molloy?"  
 "No! Lloyd—just Lloyd."  
 "Gus Joy!"  
 "No! No! Lloyd! Can't you——"  
 "Try it once more."  
 "Lloyd."  
 "Can't get it."  
 "Double l, o, y, d."  
 "'Dub lello wydee? I don't understand Kanaka. Ring off!"

(Hangs up 'phone in disgust.)—*Chicago Tribune.*

**"Nulite" Arc Illuminator No. 42.**

Chicago Solar Light Co., 132-134 Lake Street, Chicago, Ill., have added to their line of incandescent vapor gasoline lamps a new Arc Illuminator which they market as their No. 42, which has been brought out to meet the demand for a well-made lamp of high candle power at a moderate cost. It is described as constructed of the

**"NULITE" ARC ILLUMINATOR NO. 42.**

best metal and made in the best possible manner, all joints, connections, valves, etc., being made with the greatest care and accuracy. The reservoir is made of 18-gauge brass, to stand a pressure of 350 pounds or over by actual test. Only 25 to 30 pounds pressure is required in operation. A new device connected to the filler valve renders it impossible to get too much gasoline in the reservoir. An extra shut off valve is provided, so that the flow of gasoline can be immediately stopped independent of the needle valve, the air mixer screws on the nipple insuring its correct position. A special cleaning outlet is provided in the bottom of the reservoir, rendering it an easy matter to empty and clean out the reservoir when necessary. An automatic nipple cleaning needle is provided. The extension arm at the top can be turned down when desired, which will many times be found a great convenience.

**Harrington & Richardson Arms Co.'s Catalogue.**

Harrington & Richardson Arms Co., Worcester, Mass., have recently published a very attractive catalogue in pamphlet form, consisting of 28 pages, handsomely printed on coated paper, and with a highly illuminated color that will aid greatly in its proper distribution. It is denominated "Center Shots At Short Range," and in its contents the H. & R. Firearms are fully illustrated and described in an extremely artistic manner, several of the pages being in three-color work, presenting an exceedingly attractive appearance. In its contents the H. & R. Automatic Ejecting Single Gun of their latest model is illustrated and described, the contents of the pamphlet showing that all their firearms are made throughout from the best material, and are handled through all their processes of manufacture, from the forging to the finished arm, entirely by skilled workmen. Among their revolvers the H. & R. Police Automatic is fully described, this Double Action Revolver having the thumb-piece cut away to prevent catching in the clothes when drawn from the pocket, making it a very reliable article for the class of consumer for which it is intended. Other Revolvers

are shown, such as the "Bicycle" Hammerless, which is small of frame and made in a very compact and effective manner that makes it reliable and safe. It has an independent cylinder stop and automatic shell ejecting device. It cocks without catch or drag, and as indicated by the name, has no hammer to catch in the clothing when hastily drawn. The H. & R. Automatic Double Action Revolver with Knife Attachment is shown on one of the most attractive pages. This arm with knife attachment is especially designed for export trade, but it seems to have impressed the domestic trade favorably, and is receiving considerable attention, creating a good demand. It furnishes a weapon that is effective without noise, holding the cartridges in reserve, or serves as a last resort after the cartridges are fired. It is practically a double arm. The knife is not intended as a mere plaything, but is made of fine steel, well tempered, and will be found effective in service. The knife is extended by the thumb and forearm of left hand springing the blade to position, after which the spring will hold it firmly in place. The firm will be pleased to send this new catalogue to the trade upon application, and the Hardwareman that doesn't write for one makes a mistake.

**An Old Weather Vane.**

Henry O. Whitman, a resident of Riverhead, L. I., is the owner of a weather vane that in 1728 was on top of the county court house, which was erected in that year on Main Street. On the side of the vane the following is engraved: "Old Court House vane; made in 1728." When the new court house was built the contractor who had charge of tearing down the old court house, took the vane and placed it on top of his barn. This was about forty years ago. During a gale in November in 1898, the barn was blown down and Mr. Whitman got possession of the vane.

# EVERY DROP

Of the Sherwin-Williams Paint is up to the highest standard of paint requirements. Every step of the manufacture is so carefully watched that not a drop of the paint can leave us without being absolutely right. Materials all chemically and practically tested. Grinding and mixing under expert supervision. Filling the cans by weight as a check on consistency. Accuracy and the best work all along the line. When the packages are sealed we know beyond all possibility of doubt that S. W. P. is right, that it will give the best possible paint satisfaction.

You can have the same confidence, and by pushing the goods with such faith in them, you can't fail to build big business.

Every drop of S. W. P. you sell will help bring in the orders.

## RECENT TRADE PUBLICATIONS.

J. E. BOLLES IRON AND WIRE WORKS, Detroit, Mich. Pamphlet of 68 pages, which is their Catalogue No. 20, covering their line of Iron, Wire, Brass and Bronze work, and including in its contents many new designs not to be found in any previous catalogue of their compilation or in any similar catalogue now before the trade. This concern is noted for high-grade work in such lines as Bank Railings, Steel or Brass Grills of every description embodied in the construction of the same; Elevator Enclosures and a vast variety of such excellent work to which the attention of manufacturers has been given from the demand by architects who make studied effects possible and add an element of beauty to the improved methods obtaining at the present time. As buildings are more simply constructed through the application of the ideas underlying steel construction, a greater demand is created for artistic work of this description in order to beautify what would otherwise be of too plain and simple an appearance. It is wonderful in looking through a catalogue of this kind to see what artistic creations are being made to-day in this line of production. Any of the trade interested in the important work covered by a class of goods now so popular, would find the catalogue an unusually interesting one, and should make application for the same.

JOSEPH DIXON CRUCIBLE CO., Jersey City, N. J. A very attractive catalogue has recently been issued by the advertising department of this important company, having reference entirely to the graphite productions which form the bulk and volume of the products of the company. Characteristic of everything that emanates from this house the pamphlet of 78 pages is superbly illustrated with half tones, the entire contents being printed on superior coated paper, making it a work of art throughout. The artistically designed cover is a pictorial gem in itself. Illustrations are given of the mechanical operations connected with the making of many of the products referred to, while the goods produced, many of which are extremely prosaic in character, are shown in artistic groups that indicate the taste and skill with which this pamphlet has been compiled. The line of articles to which reference is made is a lengthy one, too much so for us to make any extended reference to individual specialties. It's enough to say that everything relating to the graphite line or to the use to which this mineral may be applied, is embodied in its contents. No more instructive catalogue could be selected by the Hardware dealer, and the application for it will be promptly responded to by the Company, who desire to see it widely distributed.

CHARLES P. BENSON & Co., 135 East Lake Street, Chicago, Ill. Pamphlet catalogue and retail price list of the large variety of specialties handled by this firm, under the title of "Handy Helpful Articles for Housekeepers Farmers and Everybody." The contents embrace a large variety of salable specialties, most of them being designed to be retailed at moderate prices and so command a ready sale. The pamphlet is gotten up in a manner which would indicate it was to be sent by mail largely in response to a demand created by proper advertising, many of the goods described being of a character that would be useful to local agents canvassing for their sale. Included in its contents are such goods as Combination Tools, Clothes Dryers, Gas Burners, Automatic Lighters, Broom Holders, Door Catches, Sink Strainers, etc., covering a long line of similar household specialties.

REINEKE, WILSON Co., Pittsburgh, Pa. Pamphlet catalogue of 64 pages, of Gas Ranges and other cooking appliances, being their Catalogue No. 26. The catalogue is well printed and fully illustrated on good paper throughout, illustrations mostly half tones showing the line of goods which has been marketed under the name of the "Keystone," which is especially constructed for the use of natural gas. The goods represented are of new and handsome design, fully ornamented with nickel trimmings, and are claimed to have every valuable improvement known to the trade. This includes a line of Cast Iron Ranges, the ovens of which are full asbestos lined and ventilated, and have patent lighting attachment, the burners being equipped with adjustable valves and air mixers. These ranges have full flue connection, the top burners as well as the oven and all other burners being connected to the flue so that no odor of combustion can escape into the room. This is claimed by the manufacturers as being positively necessary in the use of natural gas for fuel. This catalogue forms one of a series, the other numbers in the series being applied to several distinct branches of their important business, as, for instance, Catalogue No. 25 refers to Gas Lamps and Gas Lights; Catalogue No. 24, Gas Fitting Supplies; Catalogue No. 23, Gas Stoves and Fireplace Heaters, etc. It is a very attractive catalogue and very handsomely gotten up.

SIMEON L. & GEORGE H. ROGERS Co., Hartford, Conn. Fifty-four-page pamphlet catalogue, being their Catalogue No. 2, covering the line of Plated Ware manufactured by this well-known concern, who are noted as being outside of the combination in which so many silver-plated ware manufacturers have been absorbed. The catalogue is printed on excellent paper, handsomely illustrated, with full descriptions of its contents and giving prices for every grade throughout, making it a very attractive catalogue for the Hardware dealer to refer to.

MICHIGAN STOVE Co., Detroit, Mich., who are noted the world over as the manufacturers of the "Garland" line of Stoves and Ranges, are responsible for a great many publications in which art is used as the handmaid for the exploiting of their multifarious products in the line referred to. A recent emanation from their advertising department, under the title of "Fire Fancies," reflects great credit upon the Company. Interspersed throughout are short poems from the poets of the past, each handsomely and attractively forming a page by itself, with the advantage of having immediately opposite, accompanied in all cases with a poetical quotation, an illustration of their several "Art-Garland" products.

SIMMONS HARDWARE Co., St. Louis, Mo. Catalogue No. 399, having reference to Brass Beds, Tables, Iron Beds, Tabourettes, Reed Furniture, Refrigerators, Carpet Sweepers, Lawn Furniture, Hammocks, Ice Cream Freezers, etc. This is a mammoth catalogue covering the lines of goods indicated, very exhaustive in the way of assortment, well illustrated throughout, including in the contents a full line of Refrigerators and Ice Cream Freezers that are very complete, and illustrated and described in a manner that would stimulate mail orders largely, for which purpose beyond a doubt this catalogue was compiled, that branch of the Company's business being an extremely large one. Catalogue No. 398, covering their line of Harness and Harness Goods, embraces in its contents everything necessary or desirable to be sold under this head.

## NEW GOODS AND SPECIALTIES.

### Theo. J. Ely Mfg. Co.'s Specialties.

Theo. J. Ely Mfg. Co., Girard, Pa., are the manufacturers of a number of Hardware and Woodenware specialties that can be handled with profit by the Hardware trade. In their advertisement in another column of this issue, will be found several of them that have become quite popular with the trade, meeting with a large and increasing sale. They are the manufacturers of the "Perfect" Carriage Top Dressing. The manner in which it is put up is indicated by the accompanying illustration representing the various sized packages in which it is distributed to the trade, from a half pint to one gallon in a can. It has been found a very desirable article for the purpose for which it is made, and is claimed to make as good a finish with one coat as the majority of similar

"PERFECT" CARRIAGE TOP DRESSING.

preparations would do with double the quantity. It is guaranteed not to crack or peel off, and actually softens the articles to which it is applied, adding to the durability and length of time they can stand exposure. They also manufacture the "Dandy" Hay Knife, of which we give an illustration. This is a serviceable article for the purpose, manufactured from malleable iron, the steel section knives forming the cutting part of the tool being of the best quality for the purpose. It is made to market at a reasonable price, and has found a ready sale wherever introduced. The company are large manufacturers of cross-cut saw handles. In fact, their facilities are excellent for anything in the production

"DANDY" HAY KNIFE.

of the woodenware line in handles and similar specialties; they claim to be able to quote the very lowest prices owing to the fact that they buy all their timber in the tree, and do all the work in connection with its manipulation in their own plant, enabling them to save the lumberman's profit. Those of the trade handling these goods in large quantities would do well to correspond with this company. Among the specialties made by them is the "Dandy" Mop Head, which is made in a number of varieties, and the "Dandy" Mop Wringer, a useful specialty that has met with great success. They publish a catalogue covering all these products of their plant, which will be forwarded, with bottom prices, upon request.

### Lovell's "Anchor" Brand Clothes Wringer.

Lovell Mfg. Co., Erie, Pa., are the manufacturers of the "Anchor" Brand Clothes Wringer, one of the most popular lines of this important production that is now being handled

by the Hardware trade. It possesses a number of important features readily understood by the consumer, making it a more desirable clothes wringer to impress the consumer with its many advantages than any other to which our attention has been called. Among the number of improvements that have been incorporated may be mentioned: The construction increases the durability of the rolls, because it is made impossible for grease and dirt from the bearings to come in contact

LOVELL'S "ANCHOR" BRAND CLOTHES WRINGER.

with the rubber. The bearings are unobstructed and can be quickly and effectively oiled and cleaned. It is provided with an elliptic pressure spring, which is two inches longer than those used in old-style family-size wringers, and is thus able to relieve the rolls of undue pressure, which allows of larger and thicker articles to be passed between them, while at the same time a sufficient pressure is maintained to do good wringing. The cog wheels being inside the wringer frame, and covered with Lovell's Cog Wheel Shields, prevents water from getting into the bearings. This naturally makes it impossible for any accumulation of rust. By the use of these cog wheel shields the liability of children getting their fingers caught between the cog wheels is absolutely overcome, making it a noteworthy improvement, and one that cannot fail to be appreciated. They have recently issued a complete catalogue of this line of their goods, which it would be desirable for the Hardware dealer not familiar with their latest improvements to write for.

### No. 10 "Fox-all-steel" Pulley.

Fox Machine Co., manufacturers of the "Fox-All-Steel" Sash Pulleys, Grand Rapids, Mich., and who claim to be the original manufacturers of steel pulleys of this description, have recently brought out a new style, an illustration of which we give in connection with this article. This pulley will be known as their new No. 10. It will have a 2-inch wheel, and is so constructed that it may be used in either a 4-hole mortise made by boring four 13-16 holes in a line with 5/8-inch center with a single bit, or this may be done more expeditiously by the Fox Co.'s quadruple bit, which bores the four holes in one operation, or a straight side machine mortise made by the ordinary oscillating bit, pulley mortising machine, the machine mortise being 13-16 by 2 1-16 inches in size. It will be noticed from the character of the

face of the shell, as shown in the illustration, that the pulley will present the same appearance whether in a 4-hole or straight side mortise. The interior construction of this pulley, as shown in Fig. 2, is identically the same as the several pulleys turned out by this company for a number of years.

Fig. 1.

Fig. 2.

#### NO. 10 "FOX-ALL-STEEL" PULLEY.

In fact, precisely the same wheel is used as in their previous styles, except in point of size, i. e., the steel discs making up the wheel are secured together by the company's patented shouldered steel bushing which, in its construction, also provides a smooth, durable bearing for the wheel on the axle. It is evident that the shell of this pulley is expressly designed for extra durability and rigidity under all conditions, and it may safely be predicted that it will have a very extensive sale, and this is a safe estimate of its future usefulness, because it is adapted to more general use from the fact that it may be inserted in either style of mortise, as referred to above. The manufacturers are now issuing a new complete catalogue of their pulleys, which we have previously referred to, and as this includes the new No. 10 and all other improvements up to date, it should be requested, the manufacturers gladly furnishing the same under such circumstances.

#### "New Rival" Loaded Shell.

Winchester Repeating Arms Co., New Haven, Conn., are now prepared to furnish the Hardware and Sporting Goods trade with a new black powder Loaded Shell, known as the "New Rival," shown in the illustration herewith presented. It is blue in color, and has a solid, gas-tight, fire-proof base and is made with the Winchester patent corrugated head, which has been largely instrumental in making Winchester

"NEW RIVAL" LOADED SHELL.

Leader and Repeater smokeless powder Shells popular and ready sellers. This blue Shell will not be sold empty, the company reserving it exclusively for their own loading. The "New Rival" Shell, green in color, will still be furnished the trade empty, it being branded on the head "1901 New Rival." The new Shell is attractive in appearance, and its perfect loading is referred to as making it an ideal black powder shell. These shells are loaded by the company in all gauges from 10 to 20. They carry the same list prices, and discounts as the "New Rival" Shells heretofore loaded by them, and also the same Winchester load numbers.

#### The "Bob-Sled" Skate.

Union Hardware Co., Torrington, Conn. (Tower & Lyon, 95 Chambers Street, New York), are placing upon the mar-

ket for the coming season what will prove to be a very salable specialty. It is marketed under the name of the "Bob-Sled" Skate, and is intended for the use of children more particularly. This skate will be manufactured of the extension pattern, so that but one size need be carried in stock, as by the use of the extension feature it will fit all sizes of feet, from 6 to 9 inches. It is provided with two

THE "BOB-SLED" SKATE.

runners set sufficiently wide apart, and as may be naturally supposed, the advantages of this will prove very great to children learning to skate, as the unnatural strain upon the ankles entailed by the use of the ordinary variety, is in the use of the "Bob-Sled" entirely relieved. Jobbers and dealers in the Hardware industry generally will do well to add this to their line of purchases when preparing their lists for the approaching Fall and Winter season, opening up correspondence with the agents early, as a large demand is sure to be inaugurated.

#### Improved Wrench Handle.

The Coes Wrench Co., Worcester, Mass., for whom John H. Graham & Co. and J. C. McCarty & Co. are New York agents, have adopted an improved form of construction for the handles of their wrenches, as shown in the accompanying illustration, of which four sizes, 12, 15, 18 and 21 inch, are now ready. The handle, frame and ferrule are constructed in one piece, and being rigidly keyed to the bar, make practically one solid piece of metal. The ferrule and cup tip secure the wood sides of the handle and prevent their splitting. The bars are referred to as made of the best steel for strength and durability. An improved method of case hardening has been adopted, which gives, it is stated, a uniform and desirable degree of hardness. The company call attention to the fact that the words "Knife Handle" as applied to wrenches hav-

IMPROVED WRENCH HANDLE.

ing originated with them has been adopted by them as their trade-mark, and was registered April 9, 1895.

#### Personal Integrity in Business.

In spite of many inventions, such as mechanical cash registers and bell punches, it is still a great and good fact that personal integrity is the most important item in the world's business. And there is a vast deal more of it than is generally supposed. Immense as is the annual aggregate of defalcations and embezzlements, it is insignificant in comparison with the total of business transactions.

**PATENTS** Preliminary Consultation Free.  
**HENRY J. MILLER,**  
55 Equitable Building, BOSTON.

## REVIEW OF THE MARKETS.

**Wire Nails:** The vigorous demand for Wire Nails has gradually given way, and the mills will soon be in a position when deliveries may be definitely anticipated, something they have not been able to accomplish for some time past. Quotations remain without change as follows: f. o. b. Pittsburgh, terms 60 days, or 2 per cent. discount for cash in ten days:

To jobbers in carload lots.....	\$2.30
"    less than carload lots.....	2.35
To retailers in carload lots.....	2.40
"    less than carload lots.....	2.50

*New York* prices remain the same under a demand considerably lessened. Quotations are as follows:

To retailers, carload lots on dock.....	\$2.53
Small lots at store.....	2.60

**Cut Nails:** There is an average demand for Cut Nails in the market, and the slight irregularity in prices has been sufficiently modified under a lighter demand. The following quotations represent the market: f. o. b. Pittsburgh, plus the actual freight to point of destination, terms 60 days, or 2 per cent. discount for cash in ten days:

In less than carload lots.....	2.10
Carload lots.....	2.05 to 2.10

*New York* prices. The following quotations represent the market:

To jobbers in carload lots on dock.....	\$2.13
"    less than carload lots on dock.....	2.18
Small lots from store.....	\$2.25 to 2.30

**Barb Wire:** Inability to obtain the necessary supplies wanted by the jobbing trade throughout the country has finally caused the demand for Barb Wire to settle down, and many of the jobbers to bemoan the fact that large sales could have been made, could only the wire have been obtained from the mills. While the mills are still running behind orders, the indications are that it will not be a great while before they can commence to look forward to an accumulation of stock. Quotations remain as previously quoted, and are as follows: f. o. b. Pittsburgh, terms 60 days or 2 per cent. discount for cash in ten days:

To jobbers in carload lots, Painted.....	\$2.60
"    Galvanized.....	2.90
"    less than carload lots, Painted.....	2.65
"    Galvanized.....	2.95
To retailers in carload lots, Painted.....	2.75
"    Galvanized.....	3.00
"    less than carload lots, Painted.....	2.85
"    Galvanized.....	3.10

Ellwood and Baker Wire is 5 cents and Washburn & Moen Glidden 10 cents per 100 pounds higher than the prices above named.

**Plain Wire:** There seems to be but little lessening of the demand for Plain Wire, as it enters so largely into manufacturing that orders have to be booked a considerable period in advance of actual wants. This alone keeps the mills fully engaged in turning out stock. Indications point to the fact that in the immediate future the mills may anticipate delivering orders very nearly on time. At present they are still running behind, although not to so large a degree as earlier in the season. Quotations remain as previously quoted, and are as follows: f. o. b. Pittsburgh, terms 60 days, or 2 per cent. for cash in ten days:

	Base sizes.	
	Plain.	Galv.
To jobbers in carload lots.....	\$2.25	\$2.65
"    less than carload lots.....	2.30	2.70
To retailers in carload lots.....	2.35	2.75
"    less than carload lots.....	2.45	2.85

The above prices are for the base numbers, 6 to 9. The other numbers of Plain and Galvanized Wire take the advances indicated in the following table:

Nos.	Plain Fence Wire Advances (Catch Weights).	Galvanized.
6 to 9.....	Base.....	\$0.40 extra.
10.....	\$0.05 advance over base.....	.40
11.....	.10	.40
12 and 12½.....	.15	.40
13.....	.25	.40
14.....	.25	.40
15.....	.46	.75
16.....	.55	.75
17.....	.70	1.00
18.....	.85	1.00

For even weight bundles, 50 pounds and over, 5 cents per bundle advance on above.

**Files:** Under date of June 1st, the Nicholson File Co., Providence, R. I., issued a new price list having reference to their "XF" and "Gold Medal" brands of Swiss Pattern Files. These goods have been sold at an advance on the previous list of 10 per cent., which difference is incorporated in the new list which supersedes the old one, in order to make the present discounts remain as previously quoted, no intention to advance the price being contemplated.

**Cordage:** There is but little change to note in the market for Cordage, prices remaining about previous quotations, as given below. There is occasionally a lower quotation made on goods manufactured from inferior hemp, but the prices for first quality rope are as follows:

	Pounds.	Cents.
Manilla, 7-16 inch and larger.....	10½	
¾ inch.....	11	
¾ inch and 5-16.....	11½	
Sisal, 7-16 inch and larger.....	8	
¾ inch.....	8½	
¾ inch and 5-16 inch.....	9	
Lath Yarn, medium and coarse.....	7½	
Jute Rope, No. 1.....	6½	
No. 2.....	5½	

**Binder Twine:** The market on Binder Twine is in a more improved condition than has been the case for a few weeks back. While the demand is not excessive, the prices are firm at the quotations given below, which are for small lots of twine, a rebate of a quarter cent per pound being entertained for carload lots, f. o. b. Eastern factory.

	Pounds.	Cents.
White Sisal, 500 feet per pound.....	8	
Standard, 500 feet per pound.....	8	
Manilla, 600 feet per pound.....	9½	
Pure Manilla, 650 feet per pound.....	11½	

**Linseed Oil:** Quotations are without change. The Dean Linseed Oil Co. quote as follows:

In lots of less than 5 barrels.....	62 cents per gallon.
In lots of 5 barrels or more.....	61 cents per gallon.

The five-barrel price applies only to deliveries of that quantity at one time.

Boiled Linseed Oil, 2 cents per gallon higher than Raw.	
Calcutta Oil, 85 cents per gallon.	

### THE PHILADELPHIA TRADE.

At last there has been a welcome change in the weather, which comes with such a grateful sense of relief that one is tempted to exclaim, with the poet: "Oh, what is so rare as a day in June!" The continual rains of the last two months have brought vegetation to a point where the last few days of sunshine have simply made a break from Winter into Summer. The country is looking its very best and the stimulus given to business seems remarkable. All indications point to a large trade for the month of June, and there is undoubtedly a large amount of Hardware moving—agricultural tools and building materials being largely in demand—and in many cases great difficulty is found in filling orders.

The Wire manufacturers are as far behind as ever, and it is greatly to be regretted that the increasing practice of direct shipments compels the jobber so frequently to disappoint his customers by slow deliveries. If the trade were willing

to pay stock prices, nine jobbers out of ten would welcome a change in conditions which would permit them to carry a stock of Barbed Wire and Wire Nails so as to be able to make shipments promptly, but in our Eastern section this is practically impossible under present conditions, and, of course, where the jobber is obliged to order direct from factory, it is impossible for him to protect his customer by shipping promptly. The fault is not with the jobber, but with the system which compels direct shipments.

Prices in almost all our lines are firm, while small advances are of frequent occurrence. It is quite a common thing for stock orders to be returned to the jobber with the notification from the manufacturer they cannot accept the order except at an advanced price.

The demand throughout the country seems to be most healthy—there is an utter absence of speculative buying and stocks appear to be light, which argues well for future trade.

BIDDLE HARDWARE CO.

#### THE CHICAGO TRADE.

The month just ended was a very satisfactory one, and we look for this month to be as good. The continued scarcity of many staple items, particularly Wire, is being severely felt, and the heavy demand has made prices remain very firm, with no probability of any decline in the near future. Spring Goods are being ordered very heavily, and, owing to the backwardness of the season, are now going out with a rush.

A great many of the factories are considerably behind in the execution of their orders; hence we fear that the scarcity of goods will be felt on many more items before long, and it is probable that some of the trade are anticipating this, to judge of the liberal orders that are being placed.

The building trade is unusually active, not only locally, but very generally over all the territory we cover, which has influenced a very large sale of Builders' Hardware in all sections. Shelf Goods are also being bought very freely. Orders are also coming in to us now on several lines for Fall shipment, which gives every indication that many of the dealers are taking advantage of prices ruling at this time, feeling assured that higher, rather than lower prices, will prevail later, when the goods are actually needed.

WELLS & NELLEGAR CO.

#### THE ST. PAUL TRADE.

All the real trouble we have at present is a scarcity of Barbed Wire, which results in a howl from all our customers and a desire to know why we cannot supply them. Such explanations as we can make are not satisfactory, but rather seem to make the trade think that we are not honest in our statements, but the great Company who make the stuff are immovable and do not, possibly cannot, make promises of early delivery. The trade in this would be exceedingly good had we the stock to supply the demand. Prices are firm and should be because of its scarcity, if for no other reason. Altogether trade is very good, but already there is a cry for rain, and there is no doubt but what all the territory we travel will soon begin to suffer if the rain does not come soon, but up to the present time orders are coming in very nicely. Prices on all lines are firm. All goods made of wire or sheet steel are hard to get, with no immediate prospect of a let up. We believe the entire country will have a very large fall trade unless something unusual occurs. Thousands of emigrants are going into the States west of us, and good States they are. Soon they will be consumers of vast quantities of goods, and this city, being at the entrance to this Eldorado, and holding the key to the situation, will naturally get the benefit of the opening of this empire.

C. W. HACKETT HARDWARE CO.

#### THE DAVENPORT TRADE.

Scarcity of Barb Wire, Woven Wire fencing and staples are the leading topics of conversation among the Hardware

The demand which we have created for this excellent wood finish makes it a most profitable article for hardware dealers to handle.

**JAP-A-LAC** is the best finish on the Market for  
FLOORS AND INTERIOR WOODWORK.

Women all over the country are buying and using it. Put in a line of JAP-A-LAC and add to your revenue.

We have a very attractive proposition for dealers.

The Glidden Varnish Co.,  
CLEVELAND, OHIO.

dealers, and there is no immediate prospect of relief from the present famine in stuff made of wire.

The drouth that has prevailed here for several weeks is injuring the meadows and the crop of hay will be light.

Notwithstanding the fact that we cannot get any Barb Wire, the sales for May were largely in excess of the same month a year ago.

Collections are fairly satisfactory.

SICKELS, PRESTON & NUTTING CO.

#### THE SAN FRANCISCO TRADE.

The mixture of sunny and rainy weather in California the past fortnight is accounted as having been most propitiously done in the interest of a ripening crop season, and to-day, June 1st, the local Hardware trade has been telling the writer it never felt better than now, prospectively speaking, and both Hardware jobbers and retailers are crediting May with having been abreast of the record month in amount of sales. And this, too, in the face of considerable concern, anent labor trouble agitators and the followers they manage to keep in tow for revenue only—if not *only*, common talk is at fault. But since the Building Trades' Council, which is quite friendly to the Builders' Hardware Association, is at outs with the San Francisco Labor Council, the timid, would-be builders are getting better heart for improving their realty, and so the Builders' Hardware dealers are governing themselves accordingly. It is noted also all along the line that promptness on the part of jobbers to respond to retailers' needs is woefully lacking, yet it is a sympathetic all-around lamentation participated in alike both by jobber and retailer, the consoling understanding being that California's prosperity is general throughout the entire country, and that Eastern manufacturers and shippers cannot keep up with the demand.

Speaking of Eastern manufacturers, it is suggestive to note quite recent accessions to San Francisco's mercantile and manufacturing interests of large business and industrial establishments of the Eastern States. Inquiry from these sources continues, and it is likely that the new comers of the last few weeks are only the advance guard of the welcome forces that are moving on to this city to take full advantage of the growing Pacific Ocean trade and demand for American products. The latest addition is the firm of C. Sidney Shepard & Co., said to be one of the most extensive manufacturers of tin and enamel ware in the United States. The house has branches in a number of principal cities of the country, and has just leased in this city the commodious brick warehouse building at 224 and 226 Beale Street, running through to Fremont Street. As showing the favor with which the firm regards its trade on this coast, it may be added that the lease is for five years at \$4,200 a year. Other Eastern concerns which have located here within the last few

weeks are the Eastman Kodak Co., of Rochester, N. Y., the Mobile Co. of America, the Otis Elevator Co., the Illinois Glass Co., and a large European and Eastern firm of manufacturers and dealers, going in this city under the title of the California Hydraulic Engineering and Supply Co.

INDUSTRIAL PRESS ASSOCIATION.

#### THE GRAPHITE TRADE.

In spite of twenty-four rainy days and three cloudy days in the month of May, we look back upon that month with a great deal of satisfaction. As many of our Hardware friends know, we have been catching up with their back orders for Dixon's Lumber Leads and at the same time we have done a larger business than ever in our general lines.

Increased sales in Crucibles show that the brass business is still good. Steel Crucibles reflect continued prosperity in the steel trades. It may be the steel industries are turning out projectiles and armor plate, for we know the powder manufacturers are buying graphite for glazing gun powder, and one goes with the other.

By the way, have you an idea of the spreading power of pure graphite? An engineering expert some time ago found, by experimenting, that a Dixon American Graphite pencil contained sufficient graphite to make a mark fifteen miles long. A further proof of the covering or spreading power of graphite is shown in the following statement made by the well-known powder manufacturers, The Lafin & Rand Powder Co.:

"We have glazed under proper conditions, one ton of powder with a teaspoonful of Dixon's best graphite. Of course, you understand this is not an every-day occurrence, and in order to do this the powder would have to be at its best and caught at the right time, and run longer than it takes ordinarily. But the above is the result of experiments which we have had at our mills."

JOSEPH DIXON CRUCIBLE CO.

#### How President McKinley Enjoyed a Hearty Laugh on Meeting a Hardwareman.

On arriving last month in San Francisco, President McKinley and his cabinet were officially met and heartily welcomed by a reception committee, of which A. A. Watkins, vice-president of W. W. Montague & Co., Hardware jobbers, was a member.

After shaking hands with the Mayor of the city, the head of the committee, this chief official of San Francisco, Hon. James D. Phelan, introduced to the chief official of the United States each member of the reception committee. And when it came Mr. Watkins' turn to be presented to Mr. Mc-

Kinley, it was noted that their hand shake was not only a bit prolonged, but also that this conversation took place:

"The last time I met you, Mr. President," said Mr. Watkins, "you appeared to be in a great hurry."

"Where was that?" Mr. McKinley asked.

"It was at Cedar Creek in sixty-four. I was with Early's command."

"Well," said the President, with a broadening smile, "I'm glad to meet you again, and under these calmer conditions. I'll never forget that 19th of September, '64, and the hurry-away movement that had possession of us, a great lot of Northern troops. You fellows gave us an awful routing. If you had only pushed ahead, I don't know where we would have stopped. I've often wondered why Early didn't keep us going."

"I can tell you," said Watkins. "We found more bacon and crackers in your wagons than we had seen in three years, and we stopped for the banquet."

#### The Terrible Cost of Delay.

We recently heard of a retailer who, with a building and stock worth \$10,000, carried \$7,000 of insurance. On May 2 a policy of \$5,000 expired. Instead of renewing it immediately, he decided to wait, thinking, no doubt, that a delay of a day or two would make no difference. Possibly he was debating in his mind the advisability of carrying his own insurance or perhaps hoped by waiting to obtain a more favorable rate. However it was, the policy lapsed, and the insurance on \$10,000 worth of property was reduced to \$2,000. The next day the business portion of the town was swept away by fire. The dealer's store and stock were totally destroyed.

Let this be a lesson to every dealer. No insurance should be allowed to lapse unless the stock has been reduced accordingly. The temptation to carry one's own insurance is sometimes irresistible to the merchant who has never suffered a fire loss, especially when the premium on current insurance is due and must be paid. The dealer referred to would now gladly pay the premium many times over to secure the protection he threw away. The proper attitude of the business man toward insurance should be one of expectancy; he should expect that his place of business will be visited by fire any day. No dealer can afford to carry his own insurance.—*Farm Implement News*.

Mr. Watchem—Odd thing, nowadays! The single men seem to take to the married women, and the single women take to the married men.

Mr. Stingham—And the married women take to any one they can get!—*Ex.*

### PATENTS.

The following list of Patents, Trade Marks and Designs of interest to our patrons are furnished by Davis & Davis, Solicitors of American and Foreign Patents, Washington, D. C., and St. Paul Building, New York City.

#### Patents Issued May 14th, 1901.

- 673,876. CURRYCOMB, Edward G. Kubler, Wurzburg, Germany.
- 673,897. SELF-CLOSING FAUCET, David M. Bredin, Pictou, Canada.
- 673,907. PORTABLE CLOTHES-LINE REEL, Andrew P. Johnson, Minneapolis, Minn.
- 673,932. MEAT-SLICER, Peter S. Transue, Delaware Water Gap, Pa.
- 673,933. SHARPENER FOR SCISSORS OR KNIVES, Chas. C. Wallace, Delhi, N. Y.
- 673,969. TRUSSED LADDER, Wm. J. Rutledge, Otisville, Mich.
- 674,004. VALVE FOR FLUSHING TANKS, Oscar R. Hess, Cincinnati, O.
- 674,088. CURRYCOMB, Charles H. Obey, Galena, Ill., assignor of five-eighths to R. J. Edwards, same place.
- 674,088. BOLT-CUTTER AND NUT-SPLITTER, Abijah Hoak, Sterling, Ill., assignor of one-half to Wm. B. Carolus, same place.

#### PATENTS EXPIRED MAY 20, 1901.

- 298,738. VALVE MECHANISM, David T. Ellis, Bridgeport, Conn., assignor of one-half to the Belknap Mfg. Co., same place.
- 298,745. APPLE PARER, CORER AND SLICER, Wm. H. Griscom, Reading, Pa.
- 298,750. HYDRAULIC COCK OR FILTERING-FAUCET, Albert Hollowell, Lowell, Mass.
- 298,765. COMBINED CANT-HOOK AND LIFTING-JACK, Obed H. Mitchell, Springfield, Mo.
- 298,777. BENCH VISE, Calvin Riggs, Worcester, Mass.
- 298,786. AUGER, Henry L. Shaler, Deep River, Conn.
- 298,787. PNEUMATIC DOOR-CHECK, John A. Sherman, Boston, Mass.
- 298,788. PNEUMATIC DOOR-CHECK, John A. Sherman, Boston, Mass.
- 298,791. BUILDERS' SCAFFOLDING, Daniel W. Spooner, Minneapolis, Minn.
- 298,820. SAW-JOINTER, Barnard S. Bozard, Brooklyn, N. Y.
- 298,829. TABLE-KNIFE, Arthur W. Cox, Newark, N. J.
- 298,839. LATCH, George Fowler, Philmont, N. Y.

298,892. INSERTIBLE SAW-TOOTH, Wm. B. Risdon, Trenton, N. J., assignor to the Amer. Saw Co., same place.

298,914. STAY-ROLLER FOR SLIDING DOORS, Le Grand Terry, Horseheads, N. Y.

298,995. CLAMP FOR FRAME-SAWS, Andrew McNiece, Newark, N. J., assignor of one-half to Rowland Hilton, same place.

299,076. COMBINED STREET AND LAWN SPRINKLER, Joseph Jungbluth, Erie, Pa.

#### PATENTS ISSUED MAY 21, 1901.

- 674,371. SPRAYING-NOZZLE, Carl Altenburger, Des Moines, Iowa.
- 674,399. PIPE-WRENCH, Eugene Childs, Boston, Mass., assignor to Trimont Mfg. Co., same place, and Portland, Me.
- 674,433. TWINE HOLDER AND TAKE-UP, John T. Bunting, Sr., Chicago, Ill.
- 674,504. SAD-IRON, Thomas F. Hagerty, San Francisco, Cal.
- 674,513. ASH-SIFTER, Wm. McKeever, Brooklyn, N. Y., assignor to one-half to Joseph A. Butt, same place.
- 674,628. WAFFLE-IRON, Matthew Griswold, Jr., Erie, Pa.
- 674,640. HAMMER, Francis C. W. Stelter, Astoria, N. Y.
- 674,646. SCALE, Allen De Vilbiss, Jr., Toledo, Ohio, assignor to the De Vilbiss Computing Scale Co., same place.
- 674,678. DOOR-SPRING, George W. Gerau, Middletown, Ohio.
- 674,719. SCREW-DRIVER, Gary L. Woodruff, Albany, N. Y.

#### TRADE-MARKS.

36,463. EGG-BEATERS AND CREAM-WHIPS, Landers, Frary & Clark, New Britain, Conn., the word "Universal."

#### PATENTS EXPIRED MAY 27, 1901.

- 299,100. CORKSCREW, Joshua Barnes, Brooklyn, N. Y.
- 299,142. SEGMENT-SAW, James Hilton, Newark, N. J.
- 299,144. FOUNTAIN-BRUSH, Thomas Huntbatch, Geneva, Iowa.
- 299,149. DOOR-HANGER, William J. Lane, Poughkeepsie, N. Y.
- 299,188. WINDOW-BRUSH, John Staples White, Portland, Me.
- 299,199. SASH-CORD FASTENER, Roswell N. Brown, Hoo-sick Falls, N. Y.
- 299,210. HAND PUNCH, Isaac M. Dunckleburg, Rochester, N. Y., assignor to Chas. K. Judson, same place.
- 299,217. SASH-HOLDER, George E. Gorham, Albany, N. Y.
- 299,349. SAW-SET, George Albert Francis Clayton, Masonville, Va.

675,333. SAW, Arthur L. Joslyn, Albany, N. Y.

### Warren's System of Cabinet Shelving.

J. D. Warren Mfg. Co., Chicago, Ill., are largely responsible for the comparative ease and comfort with which the retail Hardware business may be transacted in the twentieth century. The improvement of Hardware stores by the adoption of the modern fixtures placed on the market by this progressive company facilitates operations and enables double the volume of trade to be among the possibilities of an active force. Among the many purchasers who have already this year discovered this fact are the following (the demand, it will be noted, is not confined to any one section):

Steil Bros., Emmetsburg, Ia.; E. A. Weatherbee, Lincoln, Me.; Conn & Higgins, Ada, I. T.; Rendigs-Magill Hardware Co., Cincinnati, O.; Kee R. McKee, Gracey, Ky.; Phil Denitz, Clayton, N. M.; C. W. Gibson, St. Joseph, Mo.; Morris Hardware Co., Youngstown, O.; Grier & Osterhout, Punxsutawney, Pa.; J. G. Smaltz, Le Mars, Ia.; G. E. Moore, Norfolk, Neb.; H. O. Kenfuss, St. Genevieve, Mo.; A. Stenehjen, Mayville, N. D.; M. L. Larson, Warren, Minn.; Harns & Rogers, New Market, Minn.; Cavis Bros., Bristol, N. H.; Armstrong & Ellwood, Lathrop, Mo.; Ross Moyer Mfg. Co., Cincinnati, O.; Ketch Hardware Co., Richmond, Ind.; Sugg & Landerdale, Dyersburg, Tenn.; O. A. La Budde, Elkhart Lake, Wis.; H. J. Hooval, Jackson, Minn.; J. B. Buck, Rugby, N. D.; Jones & Tudor, Van Wert, O.; Moore & Tobin, Mankato, Minn.; Dunn & Wood Hardware Co., Rhinelander, Wis.; Shanton & Forge, Charleroi, Pa.; Griffith & Traukens, Floresville, Tex.; Thurston Hale & Co., Rockport, Mass.; Wm. G. Gros-

jean, Milwaukee, Wis.; Reipp & Jaynes, Early, Ia.; Warren Hardware Co., Minneapolis, Minn.; C. F. Schmidt, Marshalltown, Ia.; Creston Hardware Co., Creston, Ia.; Doremus & Becker, Geneseo, Ill.; C. C. Newman & Co., Columbia, Mo.; Ritter Bros., Higginsville, Mo.; F. A. Wood, Plainfield, Wis.; Good & Dana, Kewanee, Ill.; Scofield & Co., Sturgeon Bay, Wis.; Stevenson, Findley & Pollock, College Springs, Ia.; Bert Poffenberger, New Boston, Ill.; H. B. Gunnis, Algonac, Mich.; Arizona Copper Co., Clifton, Arizona; Lindenmeyer Bros., Dorrance, Kan.; Miles Implement Co., McPherson, Kan.; Aug. Berger, Berger, Mo.

### The Ten Great Cities of the World.

The populations of the largest cities in the world, according to the latest figures, are as follows:

London .....	(1901)	4,536,034
New York.....	(1900)	3,437,202
Paris .....	(1896)	2,536,834
Berlin .....	(1901)	1,884,151
Chicago .....	(1900)	1,698,575
Canton, China.....	.....	1,600,000
Tokio .....	(1898)	1,452,564
Vienna .....	(1891)	1,364,548
Philadelphia .....	(1900)	1,293,697
St. Petersburg.....	(1897)	1,267,023

It will thus be seen that of the ten leading cities the United States have three, while no other country has more than one.—From the *Albany Argus*.

The fire loss of the United States and Canada, as compiled by the *New York Journal of Commerce*, shows a total of \$11,352,800, as compared with \$15,036,250 in March of this year, and \$25,727,000 in April, 1900. The total loss for the first four months of 1901 amounts to \$56,956,000, as against \$66,258,500 in the corresponding period of last year. The Jacksonville disaster will, however, about equalize the difference in favor of this year.

The United States exported 30,768,000 bushels of corn in 1891; to Europe that year 23,533,000 bushels. There has been a steady increase in our foreign corn trade, and we sold abroad, in the fiscal year ended June 30, 1900, 209,348,000 bushels; to Europe 192,519,000 bushels. We used to export from 1 to 5 per cent. of the corn crop. We are now exporting from 10 to 11 per cent.

"Yes, there is something in a name. There's my wife, for instance."

"What about her?"

"Why, her name is Olive, and I didn't like her at all at first."—*Cleveland Plain Dealer*.

# 273 Broadway, N. Y.

Gentlemen:-

We wish to extend through your columns our congratulations to the members of the Southern Jobbers Hardware Association on account of their very successful annual Convention.

Very truly yours,  
**BOSTON & LOCKPORT BLOCK CO.,**

per *M H Tarbox* Treas.

An artificial ivory, known as "lactite," is made from milk-casein, and is used for billiard balls, toothbrush handles, combs, etc. By treatment of the same casein certain manufacturers prepare a paste or powder that can be used instead of eggs in some kinds of cookery, while costing only half as much. The casein combined with alkaline makes a hydraulic

cement. The curd is cut into bits, which are dried rapidly and then finely powdered. The powder is mixed with 20 per cent. of pulverized quicklime. Curdled milk has been for some time used in white-washing buildings and to prevent scaling. For this purpose it is mixed with lime so as to make a thick liquid.—*Ex.*

points of superiority:

- 1st.—Absolute Simplicity.
- 2d.—Absolute Control of Both Jaws instead of One.
- 3d.—Absolutely No Chance to Hurt the Hands.

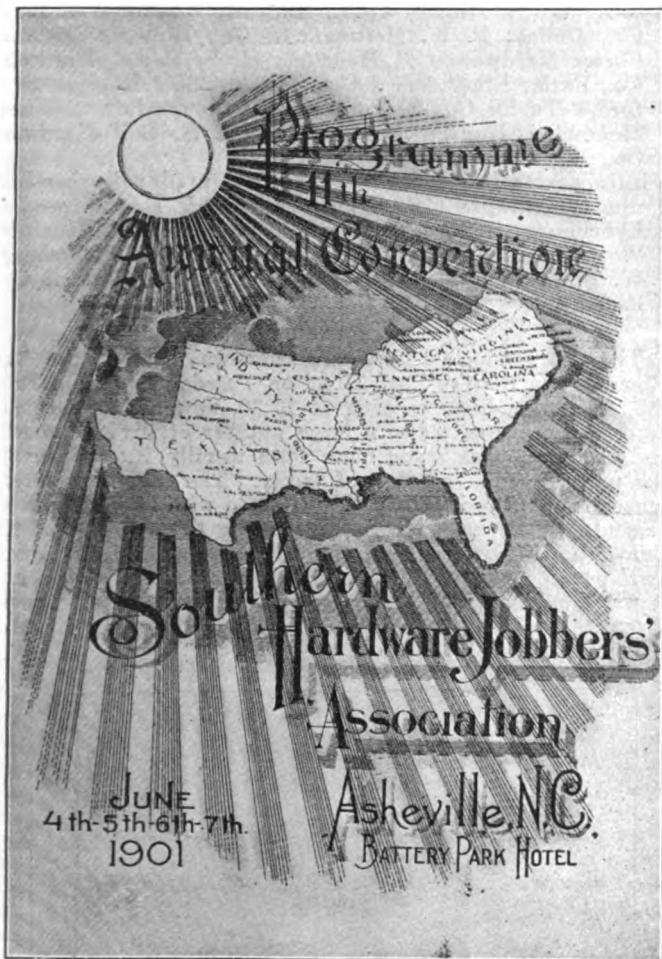

## SOUTHERN HARDWARE JOBBERS ASS'N.

SOUTHERN HARDWARE JOBBERS' ASSOCIATION.

Surrounded by the most perfect conditions imaginable, and under the most favorable auspices, the Eleventh Annual Convention of the Southern Hardware Jobbers' Association was

held at Battery Park Hotel, Asheville, N. C., on Tuesday, June 4, and the three succeeding days, and now forms part of convention history. No more attractive spot could have been found for the purpose than the place selected. It was

occasion one of the happiest of functions, and aided by their enjoyment in inspiring their escorts in the fullest sense with the true characteristics of a Southern welcome. The visitors were all received in the most cordial manner, made doubly memorable by the numerous courtesies and entertainments provided for their reception.

The officers and members, the many guests who formed part of the grand assemblage, the bright and lovely faces of the throng of wives and daughters who were present, rivalled each other in the ever-existing desire to make the affair one long to be remembered as the crowning act of Southern hospitality, in which the heart goes with the hand in a fraternal grasp that lives in memory forever after.

The hotel selected, one of the most picturesque in architectural beauty and superiority, in point of location, in the South, helped materially to advance the general comfort of the gathering. Mine Host McKissick was untiring in his efforts to add to the continued comfort of his guests, and the resources of his immense hostelry were called into action with a completeness worthy of mention in order that contentment and comfort should be the inspiring motives underlying the great amount of labor made necessary to accomplish it.

The preparations for the proper care and entertainment of the convention and the happy delegates that formed its personnel were delegated to one of the most distinguished reception committees possible for such an occasion. It represented all the leading manufacturers, more especially those who at present enjoy the most fraternal relations with the jobbing trade of the South. It had a Chairman in Irby Bennett, who, from long familiarity with its many obligations, was indefatigable in the work from which was achieved the success so happily noted.

The following list comprises the officers, standing committees and members of the Southern Hardware Jobbers' Association for 1900-1901:

### OFFICERS, 1900-1901.

President: J. D. Moore, Moore & Handley Hardware Co., Birmingham, Ala.

First Vice-President: C. E. Speer, Speer Hardware Co., Fort Smith, Ark.

Second Vice-President: F. A. Heitmann, F. W. Heitmann & Co., Houston, Texas.

Secretary-Treasurer: C. B. Carter, Russell Building, Knoxville, Tenn.

Executive Committee: W. M. Crumley, Beck & Gregg Hardware Co., Atlanta, Ga.; O. B. Barker, Barker-Jennings Hardware Co., Lynchburg, Va.; G. W. Barnett, Teague, Bar-

Fall & Co., Nashville; H. G. Lipscomb & Co., Nashville.

**Texas.** Ed. S. Hughes & Co., Abilene; Moroney Hardware Co., Dallas; F. W. Heitmann & Co., Houston; Bering-Cortes Hardware Co., Houston; H. S. Bettes Hardware Co., Paris; Elmendorf & Co., San Antonio; Roberts, Sanford & Taylor Co., Sherman; Eikel-Breustedt Co., Waco; McLendon, Duncan & Co., Waco; R. E. Bell Hardware Co., Weatherford.

**Virginia.** Piedmont Hardware Co., Danville; Barker-Jennings Hardware Co., Lynchburg; Clark Hardware Co., Lynchburg; Paul R. Howard Hardware Co., Norfolk; Watters & Martin, Norfolk; Charles Leonard, Petersburg; W. S. Donnan & Co., Richmond; Watkins-Cottrell Co., Richmond.

#### TUESDAY MORNING SESSION.

The first session of the Convention was held in the Ball Room of the Battery Park Hotel on Tuesday morning, June 4th, the proceedings opening at 10:30, upwards of 40 delegates being present; also a large number of invited guests, and the event was made more than usually interesting by the presence of a number of ladies. The unavoidable absence of Vice-President Speer was noted with regret by those present. The president, in announcing the opening of the Convention, invited all present to unite in singing "America," which was done. The roll call was next in order, and it was found on reading the same that few delegates were absent. President Moore then proceeded to deliver his Address of Welcome.

PRESIDENT JAMES D. MOORE.

#### ADDRESS OF WELCOME BY PRESIDENT MOORE.

After the calling of the roll had been proceeded with, President Moore welcomed the delegates in the following enjoyable manner:

Ladies and Gentlemen: By virtue of my position, it becomes my duty from which I derive pleasure, of extending to you a cordial welcome to this, the opening of our Eleventh Annual Convention.

This is the land of the sky, and we have made a good start toward the happy place where all the good people go and

which is understood to be situated on high. May we finally complete the journey by going all the way and may not one of this goodly crowd be left behind. I rejoice to see so many ladies who have come to cheer us while we are studying the laws of trade and cultivating the laws of good fellowship, which shall in some degree soften the rough, keen edges of fierce competition and make business more pleasant and more profitable. You notice I emphasize the more profitable since this is important in making a success.

You may think it a little singular that an Alabamian has come to North Carolina to welcome people to her soil and extend the freedom of her privileges, but I feel that I have some right here. My maternal great-grandfather, George Dismukes, was a pioneer in this State, and was major in the Revolutionary War and helped to win some of the liberties we all enjoy. My father was born in this State and used to entertain his children around the fireside of a wintry evening, and we enjoyed the bright blaze of the Georgia pine knots under the large sticks of wood in the old-time fireplace with the wonderful stories of the great people and the great things he saw and learned when in this old North State when a boy. This has long made me want to climb her hills, drink her pure clear water, and fill my lungs with her abundance of ozone which renews our youth and keeps us ever young.

Here we are in the leafy month of June, met under auspicious circumstances in the Mecca of health, surrounded by all that is pleasant, to study how to make life more agreeable and profit by the exchange of ideas which are the soul of good business. We are glad to see the Manufacturers and have them come to renew their friendship and make them stronger than ever and give us the benefit of their presence and their counsel. The Manufacturers and Jobbers are necessary to each other and can help each other by cultivating close friendship, and we are glad to see this recognized by your presence among us. We would not be happy without you, and we want you to have a good time. We are glad to see and welcome the large body of commercial travelers whose business it is to mediate between the Manufacturers and Jobbers. He is essential to both.

A few years ago, when the great combinations or consolidations began forming, which have not yet ceased, we all wondered what was to become of the commercial travelers and thought at first there would be no longer need of him, but we are glad to find that we were mistaken and that there has never been found any agency so potent as the audible, living voice as a mediator between the Manufacturer and the distributor.

We hope while we continue in business that there will never be found anything to take his place. Some of our strongest friendships and warmest attachments are found among these men. I am glad to have them come to see me, and I am glad to have them here to take part in these, our annual conventions.

So, ladies and gentlemen, I am commissioned to extend to you all a most hearty welcome and bid you have a royal good time and take away from this place only the most happy recollections.

I now commend you to our most excellent Entertainment Committee, of which Irby Bennett is chairman. He has served in this capacity since our organization was first started and all of those who have attended our former meetings and observed his excellent work will, I am sure, agree with me that he is the right man in the right place. You will observe the other members of the committee by their badges, and I am sure that any of these ladies or gentlemen will consider it a favor to have you make any request of them that will add to your pleasure while here. I am glad to note that we have this year added a new departure from former customs and have a committee of local ladies who will be glad to assist in making the occasion even more pleasant for the ladies and others.

At the conclusion of the president's address, which was received with the usual marks of the Convention's favor, L. M. Bourne, the Corporation Counsel of the city of Asheville, was introduced and delivered the following very able address on the subject of "Asheville:"

#### ADDRESS OF LOUIS M. BOURNE.

Mr. President, Members of the Southern Hardware Jobbers' Association, Ladies and Gentlemen:

I don't know why but it is a fact, nevertheless, that since your kind invitation to me to make this address became generally known, my friends have persisted in discussing the comparative methods of hard wares and soft wares and have even attempted repeatedly to illustrate the superior virtues of soft wares. As I am a firm believer in the principle that both sides of any question are entitled to a patient and an in-

telligent hearing, I have submitted to this discussion and swallowed their illustrations to the fullest extent desired by my friends. It is needless to say that as a preliminary to this illustration, of which I have been the more or less unfortunate victim, the famous and historical expression of the Governor of North Carolina to the Governor of South Carolina has been repeatedly invoked. And I want to say right here that I am deeply grateful to a vigorous physical constitution for my ability to appear before you to-day, so strenuous has waxed the argument and so plentiful have been the illustrations. But I do not mean by anything I have said or am about to say to discourage my friends or disparage their efforts; on the contrary, I want it distinctly understood that I am still *unconvinced* and in a receptive frame of mind and body.

But seriously, my friends, we have all been looking forward with bright anticipations to this occasion. Asheville is glad to welcome you and hopes to treat you in such a kindly and sympathetic spirit that you will return to your homes with good reports of her bountiful and cheerful hospitality. Confidently believing that this will be the result, and that this result will speak more eloquently than anything I can say of her virtues as the queenliest city of our beautiful Southland, I am almost constrained to silence by my confidence. But lest it be said or thought by others that one of her sons and loyal subjects when given by your grace an opportunity to extol her virtues, held his tongue because of the meagreness of his subject, I speak to you now.

Asheville appreciates the honor conferred in her selection as the place of your annual gathering together. Though she has been often honored by those in other walks of life, she cheerfully acknowledges her appreciation of the distinction unmistakably indicated in the choice of business men who are an important part and parcel of the industrial activities of a remarkable age. And permit me to say right here that I feel assured that this selection was due, no doubt, to an intelligent exercise of that good judgment which has been so often and so successfully invoked in your business affairs.

Asheville is the capital city of Buncombe County, a county that has given a local habitation and a name to a method of argument that, though ordinarily spoken of disparagingly, yet in its analysis, is anything but base or low. Remember, my friends, when any one accuses you of speaking for Buncombe, even though he intends to disparage your effort, yet he simply means that you are talking for the benefit of those who are nearest and dearest to you, and who deserve your best thought and best talk. And I have no doubt there will be much Buncombe talk at this re-union.

This is the home of the immortal Vance, of Clingman, of Merrimon and others who in the national arena illustrated and emphasized the virtues of Southern statemanship in days that tried men's souls.

Here is the central point in the beautiful plateau that extends from the restful Ridge of Blue on the East to the grand and solemn Smokies rising, "distinct as the billows but one as the sea," to the West. Here, indeed, one can commune with Nature and enjoy her multitudinous solitudes, and yet not walk a bowshot from the trolley-car or the automobile.

Here you tread the sacred soil of the city that enjoys the unique distinction (and I pause that the emphasis may sink into your souls) of having passed and enforced the *first* anti-expectoration ordinance that was ever adopted in a municipality of America, if not of the world. You may not appreciate this momentous achievement, but the medical world is singing her praises because thereof and progressive towns and cities all over the country are following her example.

Asheville is the city in the shadow of whose walls is the house that Vanderbilt, and immediately to the south of which he Biltmore.

Asheville is a city of hotels, boarding-houses and doctors. The hotels and boarding-houses are for the accommodation of the strangers within our gates, as are the doctors. No one who lives here ever gets sick, possibly out of fear of the doctors, and none such ever die, I know, out of fear of the undertakers. Indeed, Asheville is a fine place to live in but a mighty poor place to die in. Really, the doctors here have nothing to do but watch their patients and see them gradually get well. But this watching is sometimes remunerative, and this accounts for the number of doctors here. There is one physician who lived and practiced here for a long time and the influence of the profession here was so beneficent and liberalizing that he is now suing the estate of his last patient up in Pennsylvania for a modest fee amounting to only *seven hundred and fifty thousand dollars*. It is needless to say he has the sympathy and good wishes of his professional brethren here.

Asheville has the most gorgeous scenery, the purest air, the finest water (and this always did seem to me to be unappreciated except for bathing and laundry purposes and washing dishes) and the most exhilarating mountain dew that was ever distilled by nature or man. And if you don't believe this last assertion, I commend you to the tender ministrations of the soft ware men who will fill you with conviction and later with—regrets!

I must not fail to mention before closing this tribute to Asheville's glories that here is the home of the Battery Park Hotel and of the finest Mein Host in charge that ever abandoned the certain rewards of newspaper work for the more Christian life of ministering to the hunger and thirst of the needy multitude.

Here the head of the tired and weary need not go pillowless; here can be satiated the wants of the hungry; and here just as soon as our immense auditorium with a seating capacity of three thousand people has been finished in the early Autumn, can be accommodated the largest bodies that meet in convention in the United States. Then indeed, will our title of Chief Convention City of the South be changed and will thereafter read Chief Convention City of the Union. Then we can read our title clear with none to dispute our claim. And with a population of fifteen thousand, and paved streets aggregating more than ten miles within the city limits, with an auditorium suited to the needs of the greatest organizations of the world, what city in all our broad land will dare enter the lists with Asheville when she goes to seek a convention!

All these things have made Asheville great and glorious and celebrated throughout the length and breadth of our land. But these things do not constitute her chiefest glory, the crown that makes her the Queen of the Resorts of the World with none her claims to contest.

Her chiefest glory is that here, in the shadow of Pisgah, is the *Promised Land* where the sick, the tired and weary and those who are heavy laden may come for rest and health. Oh, think of it! How much of happiness is locked up in those two words *Rest and Health*. And think further on it—that Asheville is the key to that lock. How richly endowed she is by Nature and by Nature's God. What a wealth of Divine Love is revealed in this goodly heritage. It moveth us who live here everlastingly to gratitude to Him who doeth all things well.

And in closing, permit me to express the hope that you and yours in tarrying here only a while far from the cares and wears, the hurries and worries of business life may find, even if for only a moment, some of that rest in which is much strength for the fray! If that be your good fortune, you scarcely need to remember this feeble effort of mine. Asheville will live in your memory forever and forever!

Col. B. F. Eshleman, of Stauffer, Eshleman & Co., New Orleans, then delivered an eloquent Address of Welcome to the Manufacturers present, speaking as follows:

#### ADDRESS OF COL. B. F. ESHLEMAN.

Mr. President, Ladies and Gentlemen:

When I received the invitation to say a few words of welcome to the Manufacturers, I noticed our worthy Secretary, no doubt out of consideration for your patience and endurance, emphasized "few words," and reminded me that it would not take much time to prepare a short address. If an apology for brevity were necessary, this would be sufficient, but, I am well aware that none is needed. The average business man has no time to elaborate. The unembellished, bald facts suit his purpose better.

In extending to you on the part of the Southern Hardware Jobbers' Association a cordial welcome to our Eleventh Annual Convention, I realize the fact that we are grasping the hands of men of power and influence, without whom the wheels of commerce would cease to revolve and our country become bankrupt. We are proud to look upon so many splendidly built, intellectually headed, fine faced, well groomed gentlemen, from the East, West, North and South, representing the brains that have placed this country alongside of and equal to the oldest nations on the globe. We are pleased that our Southland is doing her part in this development. A century ago when our country was yet in its infancy, New Englanders turned their attention to manufacturing, while the Southerners more favored in soil and climate chose then the more frugal life of farming. They sold their cotton to foreigners and Eastern manufacturers who, in turn, sent it back to the South in manufactured goods produced by their skill. Thus the North was built up and became rich, while the Southern planter was content to live an aristocratic life at home during the Winter, and go North and abroad to spend his money in the Summer. A higher

standard of education among the masses in the manufacturing States than in the agricultural districts was necessary and was soon provided by their system of public schools and colleges. The negroes were not suited for mill work and were sent South to the cotton fields. Slavery became unprofitable in the manufacturing States and was in time abolished. This was prior to the days of "the irrepressible conflict," when sentiment did not cut much of a figure in the slavery question.

If time permitted, it would be interesting to go back a hundred years and trace the development of our country and consider the part contributed by the manufacturers. "Necessity is the mother of invention." The American manufacturer, forced to compete with the cheap labor in foreign countries, put his wits to work and invented machinery whereby one man could do the work of ten, twenty or more, while other great American minds as Morse and Edison, were working out great problems that were to revolutionize the whole world. American inventive genius has contributed more to the advancement of civilization during the century just passed than the whole world in many hundreds of years, if we except the invention of printing.

During the past twenty years the South has made rapid strides in manufacturing industries. Before the Civil War there was an apparent lack of enterprise that was not understood, and when our differences led to a clash of arms, the North expected an easy victory over a people without the means of producing the many articles necessary to carry on a great war. Necessity again forced the issue and proved to the world that the Southern people were also Americans. In a short time they were manufacturing powder, shot and shell, and also guns when the enemy failed to supply us with them, fast enough. Thus the Southerners learned a most important lesson, which after the blessing of peace dawned upon them, they did not fail to profit by. Instead of giving their time wholly to agricultural pursuits, they turned their attention to manufacturing. But recently the National Cotton Manufacturers held their annual meeting at Charlotte, N. C. This was not surprising when we consider the great development in this industry in the South and particularly in this State. Twenty years ago there were 180 small cotton mills aggregating nearly 5,000,000 spindles.

The great development in the Iron interest is well known to you, hence I will not weary you with statistics.

Your eyes are not shut to a number of other interests, in which you as manufacturers furnishing the necessary machinery are interested, viz., Wool Mills, Flour Mills, Furniture Factories, Saw Mills, Tobacco Factories and many other which, with the oil fields of Texas and Louisiana to cheapen fuel, is making the South the ideal spot for the investment of Northern capital.

In conclusion, we are happy to meet you in the mountains of this grand old State whose people were among the first in 1774, to demand justice at the hands of the Mother Country, and failing therein, to join the other colonies in 1776, in the Declaration of Independence; in the midst of a heroic and noble people, who sent One Hundred and Twenty-seven Thousand men to the field of battle in defence of principles they believed to be right; and when, after a most sanguine and gigantic struggle, in which was sacrificed their best blood, it seemed to them the "God of Battle" was not on their side, and realizing that the destiny of the nation was wielded by a Higher Hand and Stronger Arm than that of man, had the moral courage, in tears, but in good faith, to furl the cherished flag, thenceforth knowing no North, no South, but a common country under the glorious banner of the Stars and Stripes.

It gives me unfeigned pleasure to be the medium through which this cordial welcome is extended to you.

I thank you for your attention.

The address of Col. Eshleman was received by the Convention with every indication of pleasure, and Webster R. Walkley, of the Peck, Stow & Wilcox Co., New York City, responded to the same in a very feeling and eloquent manner. In fact, his address, which was entirely in poetical measure, received almost breathless attention, and at its close created an ovation of admiration. We give a number of extracts from this poetical effort, and it may safely be said from the exquisite manner in which the thoughts were expressed, Mr. Walkley deserves the high honor he has had given him of being the "Poet Laureate of the Hardware Industry."

#### ADDRESS OF WEBSTER ROGERS WALKLEY.

It is a Summer day. The air is filled with sweet perfume, The buttercups are laughing, and the daisies are in bloom.

Once and once again, to me great kindness have you shown;  
I come to greet dear friends mid all this charming beauty,  
Where Nature paints its glories, not in flower and shrub  
alone  
But where mountain peaks sublime point the way to duty.

Mr. President:

When one's elected to preside  
O'er a body democratic,  
Some one is very apt to chide  
Or call the choice, at least, erratic.

\* \* \* \* \*

Our better thoughts reach up to Heaven,  
Our better lives touch kingly souls.  
The brightest jewel God has given  
Is friendship pure which love controls.

Mid all the cares of business life,  
Such noble thoughts have been thy aim.  
A soldier still in eager strife—  
Thou lovest best an honored name.

Ladies:

Bright and fair as the morning's dawn  
Radiant in beauty as the flowers on the lawn  
Enchanting, entrancing like fairies of old,  
Thy charms indescribable ne'er can be told.  
You lend your presence to this scene and grace this opening  
hour.

To these orators you've given fire of eloquence and power.  
They knew not whence this unrevealed spirit came  
Until they caught your glance, and saw your eyes aflame  
With love and pride. These give men strength in every land  
To crush the wrong, uphold the right, and lift a victor's  
valiant hand.

Thus to you I make my bow. You say 'tis but an old man's  
greeting,  
Yet I bring a lover's heart, and perchance from out this  
meeting  
I may catch the fire of youth. So young men should count  
the cost,  
For I have known some older men to win what younger men  
have lost.

Gentlemen:

This word seems cold on a morning like this  
While you sit in the sunshine of heavenly bliss.  
Are your thoughts on the trade which you lovingly cherish,  
Or on the fragrance of flowers which vanish and perish?  
What rest one can find in the shadows of mountains,  
What peace to the soul by life-giving fountains!  
In the Dream-Land of love do you wander again,  
Forgetting the present yet remembering when  
The smiles on these faces made lighter your task,  
And the Hope of great joy tore off your heart's mask.  
You come as working men to lay foundations broad and deep,  
To discuss with others how to best maintain and keep  
Fair prices and fair profits for your capital employed  
That old age may have some pleasures which others have  
enjoyed.

\* \* \* \* \*

Now how perfunctory and chill  
These words—they do not even thrill  
The heart nor stir the springs of life.  
From out the world's commingling strife  
What shall be my theme? A reply  
To these welcome words? You say aye.  
Then I must speak for Northern men,  
And say what I have said, again.  
There is no North. There is no South.  
From that majestic river's mouth,  
Which flows from bubbling spring to sea,  
A voice—one Country 'tis of thee  
Our land, the Land of Liberty,  
Of thee I speak. Our hearts rejoice,  
Our lips breathe praise—we lift our voice  
In prayer and song—the chorus rings,  
The People rule—they are its kings.  
As citizens of this broad land,  
We take each other by the hand  
And feel that kinship of the soul  
Which makes of States a Union whole.

I wish I could speak each man's name  
In all this gathered throng,  
I'd write it high on scroll of fame,  
And thus conclude my song.

For where in all this goodly land  
Such manhood will you find,  
Or such extended welcome hand  
Which ties of friendship bind?

Love conquers figures all the time  
Business toils for beauty,  
A sacrifice is oft sublime  
When made in line of duty.

These manly men of manly parts,  
Figure discounts often;  
Yet Cupid's arrows reach their hearts,  
And all the hard lines soften.

I bring glad tidings from the hills of the Northland.  
I bring Spring flowers from the garden of pines,  
I bring to thee, brothers, who dwell in the Southland,  
Hopes of rich fruitage from Prosperity's vines.

WEBSTER R. WALKLEY.

We hear the sweet notes of the birds of the Spring time,  
The song of the brook rushing on in its glee,  
We look up at the mountains and call them sublime;  
At rivers which run to fill up the sea.

I can tell of the music of hammer and saw,  
Of the sowing of seed in fields well tilled,  
Of sermons in churches and of summons at law,  
And coffers which now are rapidly filled.

I might sing you a song of some lover's wild dream  
And tell you how Enoch won a fair maid,  
But the song is quite old and each of you seem  
To have sung the same notes 'neath the mistletoe's shade.

I bring the fragrance of sweet scented flowers,  
The buds and blossoms of Winter's hopes;  
I bring the year's record of fast fleeting hours  
And the songs of the harvest which Summer evokes.

I bring you glad tidings of a Nation at peace,  
Its rule most benignant, its people content.  
The soil yields the farmer abundant increase—  
We thank the All Giver for the blessings He's sent.

We bring you glad tidings of a country at peace—  
The drum beat of war no longer is heard,  
Yet the songs of her triumphs shall ever increase,  
Awaking sweet music like the notes of a bird.

From river and mountain, from hill and from glen,  
A voice of thanksgiving ascends to the skies;  
To Him who hath made us the ruler of men,  
Our praise in grand chorus shall ever arise.

I bring the sweet music of spindle and loom,  
Of the anvil and plough of the mill and the shop;  
Industry still builds to give Enterprise room,  
Shall the march of our Progress never find stop?

The flowers of the Spring time with the love of our hearts,  
We bring to these toilers in life's busy fields.  
Their fragrance, the spirit which ever imparts  
The courage and valor, which true-heartedness yields.

The streams are still turning the wheels of the mill,  
The stones are still grinding the wheat of the field,  
Life's currents are running, but when 'tis God's will  
The heart shall cease beating; to Death must Life yield.

I plead for men of sterling worth,  
For business methods pure and clean,  
For honesty throughout the earth,  
For fairest dealing though unseen.

For weights and measures quite exact,  
For plan and purpose unobscured.  
For statements one will not retract,  
For noble triumphs thus secured.

I plead for men who think and act,  
Whose plans in life touch high ideals,  
Whose judgments rest on solid fact—  
Are not reversed by base appeals.

I plead for men though young in years  
To watch the rising star of hope;  
To struggle on through doubts and fears,  
Quite soon a brighter day will ope.

I plead for men who dare and do,  
Who shirk no toil that duty gives,  
Who ever to the Truth are true,  
And in whose hearts the Truth still lives.

The world needs men to till the soil,  
To sow the seed, to scatter grain,  
To reap rich harvests from their toil,  
To plough and plant and reap again.

The world needs men to build highways  
Across its plains and o'er its hills;  
Who count by deeds and not by days  
The place in life their being fills.

The world needs men upright and just,  
Who will their faith nor hope deny;  
Who in their Maker put their trust,  
And for His truth will gladly die.

\* \* \* \* \*

See, here and there a vacant chair!  
A face we've loved greets us no more.  
A voice we hear from over there,  
An echo from the other shore.

My heart is full of love  
To every one I greet;  
To me your fellowship  
Is calm and pure and sweet.

At every wedding feast  
I'll feel a welcome guest.  
In West or North or East,  
Your friendship seems the best.

In spirit will I come  
With bridal blossoms fair,  
And bring the richest gems  
A Southern bride may wear.

By every open grave  
In sorrow will I stand,  
When you've lost a brother,  
I'll give a brother's hand.

Your hopes and fears are mine,  
Your conquests and defeat.  
My prayers and tears are thine  
Until again we meet.

If across the River,  
Let's hope our work well done;  
There we'll praise the Giver  
For friendship here begun.

\* \* \* \* \*

Weaver at the loom of life, take good care  
That broken threads ne'er pass thy watchful eye.  
Note the shuttles backward, forward flying,  
Living best is best prepared for dying.

President Moore then proceeded to deliver his annual address, as follows:

#### THE PRESIDENT'S ANNUAL ADDRESS.

Gentlemen of the Southern Hardware Jobbers' Association:  
I am pleased to see this large representative body, gathered from a territory bounded on the north and east by the Ohio and the Potomac, and on the southwest by the Rio Grande. We have turned aside from the active duties at home—traveled many miles in order to spend a week in the exchange of ideas and endeavor to better qualify ourselves for the work of the future. We have done this now for eleven years, and each year our numbers increase, which would indicate that we are making progress and that we have discovered the important lesson of helping ourselves most when we can help each other. When we started, the idea was abroad in the land that competitors in the same line of trade could not be close friends, but from experience and contact we have discovered something of the value of good fellowship. It is natural at this, our first meeting of the new century, that we stop and review what we have done in the past and see if we may find some lessons to guide us for the future. These are certainly wonderful times, and we are repeatedly surprised with changes in the industrial world, for which we know no precedent. Commerce seems to lead the way in teaching the great efficiency of co-operation and is giving many examples of how profitable it is to be united. We readily see the great power thus exerted and stand in awe and fear the vale rather than expect that good will come of them. So far, we have not seen any great evil except such as often follows genuine progress. We have been studying the great problem of industrial combinations for several years. They came upon us so unexpectedly and with such succession that we are stunned and bewildered. We feared that they meant great evil and have not yet fully satisfied ourselves whether they are a blessing or a curse. New ones continue to appear and give evidences of being permanent. They are the beginning of a new era. It behooves us to study them closely and see if there is any good in them. It may be profitable for us this morning to revert to the origin of the Southern Hardware Jobbers' Association and see what it was that gave us a start. My information is that just across the mountain here at Knoxville, about thirteen years ago, the jobbers of that enterprising city decided that they would form a local association with the idea in view of regulating prices and making them uniform, thus stimulating to excellence in service rather than cheaper price. The idea was good and worked well, but after a short while they discovered that more good could be obtained by extending their borders, and all the jobbers of the State met in Nashville to form a State association. Discussion developed that it was difficult to fix a boundary of their influence, and they decided to cover the entire field south of the Potomac and Ohio Rivers and christened it the Southern Hardware Jobbers' Association. So far as I know, this was the first Interstate Hardware Association formed in the United States, and as to what success we have had, you have but to view this large and representative gathering and inquire into our history. Our ideas have been endorsed until this broad land of ours, from the Atlantic to the Pacific, is covered with Hardware associations and the largest of them the National Hardware Association, which unites in one membership rep-

representatives from Maine to California and from the Lakes on the North to the Gulf on the South. The idea was too great to be bounded by such narrow confines, and it has gone over to our Canadian brethren on the North and also crossed the Atlantic to the British Isles and to Australia. The influence has not stopped here, but has extended to the retail Hardware trade, who have for some time been forming associations, and, more recently, they have organized a National association. May we not suppose that our good friends, the

other that shall send us home, resolved to excel, and that shall better equip us for the great problems that await us. Why should ten salesmen, representing the same line, be in the same town in one day? Why should North Carolina ship goods to Virginia and Virginia ship goods to North Carolina, thus wasting a useless freight charge on the same day? Why should Memphis ship the same kind of goods to Little Rock and Little Rock back to Memphis the same day? Why not let goods go from point of manufacture to nearest point of consumption, with least amount of freight charges? Cannot these questions be solved? The manufacturers are

VICE-PRESIDENT C. E. SPEER.

manufacturers, looked on for a while, and observing how good and pleasant it was for brethren to dwell together in unity, caught the idea and improved it, extending to a complete co-operation by selling out their unprofitable plants to each other and established a unity, placing their business on a more profitable basis? Just here, it will serve to illustrate my thought by telling an actual occurrence as related to me by a witness who was present in New York City, when the shovel makers met to fix prices. One of the manufacturers, whose profits had doubtless been small under old methods, was stopping at a cheap hotel, having his mail sent care of the Imperial Hotel and smoking Pittsburgh stogies that cost two for a nickel. The second meeting he stopped at the Imperial, smoked ten cent cigars and looked much better satisfied with the world. The third meeting he brought his wife and daughter, stopped at the Waldorf-Astoria and smoked twenty-five cent cigars and was liberal with them to his friends. You thus see the good fruits of better co-operation, from which I hope we may learn a lesson. It is useless to say that he and his friends could not be persuaded to return to the old paths, when each was fighting single-handed against the world. As a result of the many aggregations of capital, our country has taken her place as the leading exporting nation of the world and swapped sides of the ledger with the balance of trade. The balance of trade in our favor during the last three years has been about fifteen hundred millions and has resulted in bringing home many of our securities, and it is still so large that we hesitate to collect it all, lest we cripple our customers, and shut off trade. Hence, we shall turn creditor nation and loan what they owe us and collect the interest instead of paying interest, as once we did. Another solution is to buy up their great steamship lines with what they owe and thus solve the question of ocean freights without a subsidy, which has puzzled Congress to handle to the satisfaction of the people. Let us believe that as a preparation for the great work to be accomplished in the twentieth century that this great thought of co-operation has been given to the world and has started it on an era of prosperity for which we will search history in vain for a parallel. All this, too, within the history of our Association. I do not, of course, claim all this credit for our Association—far from it—but all I want to say in this connection is, that it comes largely of the spirit of co-operation of which our association was one of the first exponents and acted as a suggestion to start the work. What I have said will show you the possibilities of good ideas, well developed, and I trust each of you have come to the Convention, full of mature thought, and that you have something to give each

VICE-PRESIDENT F. A. HEITMANN.

solving them, why not we? We started the thought—they have taken it up and improved it. What we must have is a better unity, a more complete co-operation. I give you the thought—work it out. Our association was the first to regularly invite the manufacturers to our meetings and to take part in some of its discussions. We have not seen cause to regret this. We feel that the jobber and the manufacturer should be the best of friends and on the most friendly terms, for each needs the other. The legitimate sphere of the manufacturer is to produce and that of the jobber to distribute. The principles underlying each are different and require a different talent and a different ability. A man may be a good manufacturer, but a poor merchant, or a good merchant and know nothing of how to produce the goods. The best combination is the manufacturer to produce and the jobber to place before the trade. A man by making a specialty of selling and distributing can and should reduce the same to a fine art, and the same will apply to the producing of the goods. The principle underlying each is very different and requires a different talent. The natural and easy road is manufacturer to jobber, thence to retailer and to consumer, and the sooner we recognize this and become reconciled, the better for all, and we will thus preserve the underlying thought of all success—unity of action and purpose. There has never been a time when our members should take greater interest in association work. The evolutions of the commercial world are rapid and it requires the combined wisdom of all our best talent to forecast the near future and be ready for it. The tendency of trade seems to be to large sales and small profits. This requires that we be thoroughly intelligent about all the details. We cannot longer drift under old time methods when profits were large enough to take care of all the errors and leaks and leave a good margin. It appears that many of us make our prices based altogether on what our neighbor does, without knowing whether or not we can afford it. To correct this idea, our last convention passed a resolution that we would ascertain the cost of handling the several lines of goods, and judging by the responses our sec-

retary has had, we fear that not many of us have learned how much it costs to sell nails, bar iron, barbed wire or the various other lines of goods we handle. How many of us know what it costs to sell tin ware, or cutlery or guns and ammunition? I trust you have been giving this subject some good thought, and that during the sessions of our convention, you will be prepared to give us the benefit of what you have discovered. The two years just passed have been exceptional years in trade. The volume of trade has been large and the profits fair. Whether we are to have a succession of these years, we cannot tell. Let us hope that we will. We feel that the settlement of our financial system and the announcement to the world of our adoption of the best standard of money known to the world has had much to do with our prosperity. The intelligent merchant has recognized this all along and has given his influence to this end, and has done much to create the correct idea along this line. Perhaps this has made possible the formation of the great combinations of capital, resulting in the billion-dollar com-

SECRETARY-TREASURER C. B. CARTER.

bination upon which we at first looked with some fear and which we may yet be taught to look upon with more favor. So far, at least, we have not suffered the loss of any trade that has not returned to us in other ways. Laborers have found employment and that, too, at increased wages. The agriculturist has found a market for his surplus at better prices, and when taken altogether, some of the fruits have been good. So long as the fruits are good, let us not judge them unkindly. I know that it is a departure from all history, and we have no precedents to go by, and hence, we cannot predict with any degree of certainty the results. This bewilders us, and fills us with some trepidations and some fear that there is an element of danger. Instead of standing still and casting unkind epithets, let us apply this doctrine of full co-operation to our business and enlarge them and make them also the wonder of the world. We have recently had another short lesson in the study of panics. This time, the contest seemed to be between strong men who were able to lose large amounts without causing failure on their part. No doubt, many smaller men lost what they had; but perhaps the heaviest losses will never be reported. In this instance, the panic has wrought some good results and has doubtless checked the wild speculation in stocks which were getting too high and has driven investment away from the street to seek more legitimate channels and that, too, without any shock to the commercial world. Since that time, loans have been contracted and the reserve increased rapidly. I urge the jobbers of this association to give their loyal support to manufacturers who co-operate with them by giving them their trade and maintaining the full differentials provided. Do not let the thought that you buy cheaper and can distribute cheaper than your competitor lead you to invade his field with prices which are unprofitable. This will lead

to demoralization. We feel sure it is to the interest of the manufacturers to encourage this association, and we wish to thank them for what they have done in the past.

This association has done much to promote friendly relations between the jobber and the manufacturer and the benefits derived have been great. The great strikes which the cities and countries are now passing through suggest an inquiry into the prices for labor, and we will find that wages have been greatly increased in the last twenty years, and in some cases, almost doubled. It was a Frenchman with a genius for statistics who, several years ago, collected the wage figures of one hundred establishments in twenty-two different industries in the United States for a period of forty years, from 1850 to 1890, tabulating in the last year the wages of four million seven hundred thousand employees. He found that the average annual earnings of each man were in 1850 \$247, 1860 \$335, 1870 \$375, 1880 \$346 and 1890 \$484. This is a hopeful sign, and is encouraging to a large body of our countrymen who do much to produce good business. With the rapid improvement in machinery, the productive capacity of our country is greatly improved, and it does not require as long hours of labor and more time is left for mental and spiritual development, which we consider a hopeful sign of the times.

As to the details of what we have done since our last meeting, I will refer you to the secretary's report and to the report of our several standing committees, which are to follow.

For the first time in three years, it becomes the sad duty of your President to report the death of any of its members. Since our last meeting, we have been called to mourn the loss by death of one of your Executive Committee, W. E. Gibbins, Vice-President of W. W. Woodruff & Co., Knoxville, Tenn. He was one of the founders of our association and its first president. He was re-elected and served two terms, and after retiring from the presidency, he was elected to the Executive Committee, of which he remained a continuous member until the time of his death. Our association has lost in him one who loved it dearly and whose call to duty was ever obeyed. Harry A. Palmer, vice-president of Palmer Hardware Co., Savannah, Ga., was called next. His summons was rather sudden, while yet in the prime of life. All who had the privilege and pleasure of knowing him will mourn his loss as a faithful and true friend and as a noble man. Cartright Eustace, secretary and treasurer of A. Baldwin & Co., New Orleans, La., was taken next. I regret that I did not have the pleasure of an acquaintance with him. The fourth and last was E. C. Atkins, president of E. C. Atkins & Co., who died full of years and honors. He was widely known as a manufacturer of the well-known saws which are sold throughout the land and which bear his name. We have a memorial committee who will, at the appropriate time, give a more extended notice of these, our lamented brethren.

I desire to thank our Secretary, Mr. Carter, for his faithful and untiring labors in the interest of our Association and for his loyal and respectful support.

The members of the Executive Committee each have my sincere thanks for his counsel and support. I have, at all times, found them ready and willing to take up any work that would advance the good of our Association.

All the other officers have my thanks for their prompt attention to every call.

The president's address was followed by the report of the Reception Committee through its chairman, Irby Bennett, of the Winchester Repeating Arms Co., in which was stated that some changes were to be noted in the arrangement as originally laid out. He referred to the fact that on the evening of that day, Mr. McKissick, of the Battery Park Hotel, would tender the Association and its guests an entertainment, reception and dance in its hall.

This was followed by an informal reception to manufacturers, jobbers and visitors, which brought the first session of the day to a close.

#### EXECUTIVE SESSION.

In the afternoon an executive session was held, in which the minutes of the 1900 Convention were read, and C. B. Carter presented his annual report as secretary-treasurer. This was followed by the reports of the Transportation, Press, Grievance, Manufacturers', Membership and Executive committees. At this meeting a number of special committees were reported by the chairman of the Reception Committee as follows:

#### FLOOR COMMITTEE FOR DANCE TUESDAY EVENING.

T. H. Gossett, A. S. Jones, John Hoen, John Mapp, S. B. Bispham.

## INTRODUCTION COMMITTEE.

J. Wilson, O. C. Mead, J. M. Hottel, C. T. McKinnie, D. K. Stucki.

COMMITTEE IN CHARGE OF CARRIAGE DRIVE WEDNESDAY AFTERNOON  
AND TROLLEY RIDE FOR THURSDAY AFTERNOON.

W. H. Cole, E. M. Converse, Felix Lippmann, Geo. W. Lee, J. S. French.

COMMITTEE IN CHARGE OF PIGEON TOURNAMENT.

E. P. McKissick, J. S. Sander, Thomas Keller, W. J. Orr, L. D. Vogel.

## TUESDAY EVENING

was devoted to a reception and complimentary dance, which was tendered the delegates and visitors by E. P. McKissick, of the Battery Park Hotel, which was a very successful affair, and was in charge of T. H. Gossett, A. S. Jones, John Hoen, John Mapp, S. B. Bispham, acting as Floor Committee, and J. Wilson, O. C. Mead, J. M. Hottel, C. T. McKinnie and D. K. Stucki, forming an Introduction Committee. A number of invitations had been sent to leading citizens in Asheville, a large number of whom joined with the delegates and guests, participating in the Terpsichorean festivities until "the wee short hour ayont the twal'."

## WEDNESDAY MORNING SESSION.

This was designed to be a joint session of manufacturers, jobbers and their representatives, and as is usually the case, it was attended by every delegate that had arrived, and a full attendance of the manufacturers and their representatives.

A slight change was made in the programme, the opening address being made by W. M. Crumley, of Beck & Gregg Hardware Co., Atlanta, Ga., who addressed the convention on the

## POLICY, POTENCY AND PROFICIENCY

of the Southern Hardware Jobbers' Association, speaking as follows:

Mr. President, and Gentlemen of The Southern Hardware Jobbers' Association:

It is generally understood that you select your executive committee because of their good sense and judgment. I am afraid you will think they lacked both when they selected me to address you. However, I will try not to bring upon them any greater reproach than I can help by being as brief as possible in discussing the subject given me.

Do you realize that our beloved Southern land is the fairest country on which the sun shines? It is the home of a brave and hospitable people. It has produced the greatest soldiers and wisest statesmen the world has ever known. Words fail me when I would speak of our women—God bless them! No nation on the earth can surpass them in beauty, grace and goodness.

Our climate is unsurpassed; a soil that will yield a greater variety of crops with less labor than any part of the earth.

Our orchards are laden with luscious fruits that find their way to every market; the perfume of our flowers is wafted on every breeze; our fields whiten under the sun and starlight with a crop that last year brought us seven hundred and fifty-five millions. The bright sunlight and gentle breezes and rain from heaven wove into the yellow fields of corn, wheat, rice and tobacco a golden harvest that brought into our coffers five hundred millions of money.

One State alone in our Constellation with her great herds of cattle and fields of grain could feed the balance of the Southern States, and when fully developed, could feed all the States of the Union and possibly clothe them.

The smoke from the tobacco grown in Kentucky, Virginia and North Carolina curls over the heads of princes in their palaces and laborers in their cabins in every clime.

Our fruits and melons tickle the palate of all our Northern neighbors.

The timber in the South is equal in value to about half of all the remainder of the Union. We are now dictating to the world the price of iron and warming half the people of the country with our coal. I could weary you, if I have not already done so, with stupendous figures describing our wealth and advantages. I cannot close my remarks though without speaking of the beauty of our mountains where even liquor grows wild and mingles its aroma with the fragrance of the flowers that grow on the banks of every brawling mountain brook.

Now to apply all this to my subject from which I have wandered so far, our policy should be to utilize all the blessings God in His goodness has bestowed on our land, to its upbuilding and improvement; patronize home industries, giving them the preference always against foreign manu-

factories, thereby encouraging home capital to invest and inviting foreign capital to help build us up. We can best accomplish this by coming together as we are here, to discuss ways and means that will make our particular business a potential power for good in the building up of our whole section. I congratulate you upon belonging to the Hardware trade, for it is an evidence of your intelligence. It takes more brains and judgment to successfully run a Hardware business than any other; the time has been when "any old thing" could run a Hardware business successfully, for the

W. M. CRUMLEY, OF EXECUTIVE COMMITTEE.

profits were so large, but it is different now—it takes good judgment, and lots of it, and close figuring to arrive at the "true cost" of doing business and to enable you to declare a dividend.

You may say I have not stuck close to my text, nor have I very closely, but if you will study and practice the part of our Constitution contained in the following clause you will need no further discussion of the subject. This is the clause to which I refer:

"1st. The Southern Hardware Jobbers' Association shall be a permanent organization of the Hardware Jobbers of the South, for the purpose of promoting more intimate social relations among them and consequently a more friendly feeling.

"2d. To encourage and promote the commercial interests of the Hardware Jobbers of the South in every way possible.

"3d. To foster and encourage through social intercourse and united effort that which will insure our mutual benefit."

What can do more to this end than a united effort to build up our whole section?

The next paper to be read at this session was given by Robert Garland, of the Standard Chain Co., Pittsburg, who, on the subject of "Price Guarantees," held the attention of those present from the beginning to the close. We give the address as follows:

Address of Robert Garland, general manager of the Standard Chain Co., Pittsburg, on

## PRICE GUARANTEES.

We have all had more or less experience with guarantees in their different forms. Principal among these are:

Price Guaranteed.

Price Guaranteed against decline.

"Price Guaranteed," "Price Guaranteed against decline," expressed in a few words, but of great significance.

I venture to say that in the vocabulary in common use between Manufacturer and Jobber, there are no other sentences that can be placed on an order or on a contract that mean more. A stipulated price on such an order or contract

often means nothing; it is a secondary consideration, being something nominal, and not the invoicing or the settling price. From the Manufacturer's point of view, this broad form of guaranteeing, as it might be called, has its drawbacks, and these are serious. A Jobber will make out his order to a certain maker. He may even specify a preferred make or brand of goods, and with "Price Guaranteed," or "Price guaranteed against decline" stated thereon, he is in a position where he can apply a lower price received by him, perhaps under peculiar conditions. He may have received a quotation from another Manufacturer on a more favorable specification, or it may be the result of irresponsible competition. Goods of cheaper quality, or of untried make, may be offered, a new Richmond in the manufacturing field (and this is a crop that never fails), perhaps in ignorance of what his goods may cost him, may offer an enticing price for a first order. He will go to the Jobber, who, of course, has no compunction in beating him down; and the price so made, the manufacturer of already established goods is asked to meet, nor is he always asked. In a number of cases he first learns that he *must* meet, or is expected to meet, by having a deduction made on the remittance sheet. It can readily be seen that a number of such deductions, if allowed, will play havoc with the profits of a business. It may not occur to the Jobber that should he and his brother Jobbers place their orders with such parties, there might be difficulty in getting prompt shipment or standard goods, proper credit not being given the Manufacturer, who, in good faith, manufactures promptly, or ships from his stock on hand a standard article. This I maintain, gentlemen, is not legitimate trading.

These are only some of the instances that could be cited. It means the returning of checks, the carrying of unpaid balances, and correspondence on both sides, which takes time, and creates worry. Now and then a Jobber will be of the opinion that he is being discriminated against, and that his is an isolated case; but not so, where he has a few manufacturers from whom he buys a certain line, each Manufacturer will number his customers by the thousands, and this returning of checks, or carrying of outstanding balances is, *under such circumstances*, a matter of almost daily occurrence.

Now, while speaking of these broader forms of guarantees, it is but proper to say that there are some Jobbers who will always consider a guarantee of price against the Manufacturer's own decline, even if not so specifically stated. But, unfortunately, these gentlemen are few, and, of course, a Jobber should not be blamed for getting all he can.

We now come to another form of guarantee, which is generally expressed: "Price Guaranteed against Manufacturer's own decline." The words "up to date of shipment" are sometimes added to this form, and this is where it becomes susceptible to various meanings. The Manufacturer will contend that his lowest price *on or at* date of shipment should rule. Some Jobbers, however, go further and will ask for the benefit of the lowest price that ruled *between* the date of the placing of the order, and the date of shipment. As a consequence, we find guarantees worded "Price guaranteed *at* (instead of *up to*) date of shipment. A change in prepositions making them different propositions.

Broadly guaranteeing *up to* date of shipment on a contract or order contemplating say six months' delivery is, as can readily be seen, a serious matter to the Manufacturer, especially on a fluctuating market. He is then in a position, according to some authorities, where on such contracts all goods are sold at lowest price ruling during the period of contract, while as a matter of fact, the price at time contract was placed, and when contract was completed, might be very much higher. The fact is that, generally speaking, this matter of guaranteeing prices opens a *wide door*, and if it were done away with entirely, our trade relations would be smoother, more straightforward, and more business like. The Manufacturer of Hardware staples only hears of price guarantees when he sells the Jobber. In other words, he himself finds it impossible to make his purchases in this manner. In England *every order is a contract* just as "every tub stands on its own bottom." The British Manufacturer would not dream of guaranteeing prices any more than he would allow an order once placed to be cancelled. With our natural resources, improved machinery, and up-to-date facilities, we can outdistance England in the manufacturing field, yet in some points of trading, she is still our teacher, and her Manufacturers would hold up their hands in holy horror if it was even intimated that they should guarantee their prices. This, it seems to me, is an instance where some of us have been progressive in the wrong direction, having been overcome by the blandishments of our friend, the Jobber.

If the Manufacturer of staple goods could on his part purchase his billets, rods or wire, as the case may be, with price guaranteed, it would then be an easy matter to make guaranteeing general. But such is not the case. The buyer of raw material is not privileged to deduct a dollar a ton off the face of an invoice by claiming that "another Manufacturer has offered this price," or "this is made to meet one of your competitors." These phrases will appeal to you as being inventions of the Jobber. They do not emanate *from* the Manufacturer, but come *to* him. No, the buyer of raw material is *not* even allowed to *cancel an order on a declining market*, being held strictly to his contract to take out the last pound, no matter how much the market is off. If you, gentlemen, did not have the cancelling privilege you would consider yourself much abused, and here comes the question, "Do you on your part give your customers in the retail trade the benefit of a guarantee against your brother Jobbers?" "What is sauce for the goose is sauce for the gander." When it comes to price guarantees, the Manufacturers allowing same have evidently been the geese. Why should you not purchase your goods at a fixed price, and sell at a fixed price? We purchase our raw material, our fuel and our labor, all at fixed prices, and expect to make a fair margin of profit thereon. Just as the price on our raw material, fuel and labor is fixed, so should our selling price be fixed, and this rule should obtain in all trading. Like all questions, however, this has its two sides. On one side you will find arrayed the manu-

O. B. BARKER, OF EXECUTIVE COMMITTEE.

facturers or the sellers; on the other, the Jobbers, or the buyers, each looking at it from his own point of view, one considering guaranteeing as altogether obnoxious, and the other as something necessary. We should, therefore, strike a happy medium, and reach such a compromise as will be mutually satisfactory. It seems to me, therefore, that the Manufacturer, *if he give anything*, should not give more than a guarantee that *at* date of shipment if his price be lower, the Jobber will get the benefit of such lower price. Also giving him the privilege of timely cancellation of his order, if such order be for staple goods. If he has been quoted a lower price than the Manufacturer is willing to give, he has the privilege of cancellation. More than this should not be given on one side, nor should more be expected on the other, and if questions such as these, which might be called "points of variance" between the Manufacturer and Jobber were solved in a mutually satisfactory way, through the medium of our Hardware Jobbers' Association, and were then observed to the letter, much will be gained in the promotion of harmony in our business of trading one with the other.

#### REMARKS OF MR. IRELAND AND OTHERS.

Mr. President—Mr. Garland's speech seems to have struck the views of the jobbing portion of this audience at least. But we have another view of that thing. And I think we should go back and ask who is most capable of judging as to what the prices are to be, who fixes the price of the raw

material out of which these goods are made. I think it will be admitted by Mr. Garland even that the prices are generally fixed by the manufacturer, who buys the raw material from the smelters. The way in which these demands are created are largely due to the activity of the manufacturers themselves. I declare to you I do not believe I have ever had such a suggestion to come into my mind as to the guarantee of prices without having suggested to me on the part of the manufacturer: "Give me your business and I will control the price." Now it is this activity that has caused them to go out and solicit the trade before the season commences, and it is but natural to suppose that men who take all this risk to throw it in your hands, in the future you are going to give them some sort of protection. Now if these men who occupy positions like the Standard Chain Co. and corresponding companies do not know something about that, they have got nobody to blame but themselves. I am fully in sympathy with Mr. Garland that I do not think it is proper for any concern to take the position that because some irresponsible competitor comes along and gives a price after some standard manufacturer has made a price, that it is right to demand a change.

Another thing. There are other concerns who are considered a privileged class, whose business you are exceedingly anxious to get, and you go for it at whatever expense and you take that business with this understanding: I must have tonnage, I am going to have tonnage; I want that business and you must give it to me, and when you settle whatever the price goes to at the end of the season you shall have that protection back of it. You cannot injure the jobber without injuring the manufacturer, you cannot injure the manufacturer without injuring the jobber, and the sooner we learn to protect the interests of each other and to know that our interests are mutual, the quicker we will get to that place where we will not have those troubles to worry us. We are here for mutual advancement, mutual benefit, and I am glad that this question was brought up. I claim that it is possible for these men to correct these faults, and the only way to correct it is to concede that each man has a field of operation, and to stay in that field of operation, and not undertake to break over the bounds.

Mr. Crumley: I would like to emphasize one point my brother has made there, that the manufacturer is throwing the responsibility on the jobber. I think the manufacturer should go ahead and take the responsibility and manufacture the goods, and then let us draw on them as we need them.

Mr. Garland: In Mr. Ireland's remarks he seemed to place the responsibility of guaranteeing the prices more on the manufacturer than on the jobber, but I do not know that that is just exactly the case. I think the blame is probably equally divided. I do not know who was the first jobber that ever made a guarantee. But I think that really the jobber can be charged probably a little stronger than the manufacturer on those points, because I know for a fact that one of your associations did approach one of these so-called consolidations and ask them to go further and guarantee. Now some of us were asked to guarantee for ninety days after date of shipment. That was not business. I do not think that is good common sense, that after you ship the goods you guarantee them for some time afterwards. That did not come from the manufacturers. It came from the jobber. Therefore, I think the guaranteeing originated with the jobber.

Mr. Kettig: Mr. Chairman—Speaking from the jobber's standpoint, I do not believe it is to the interest of the jobber for the manufacturer to guarantee prices. I believe it is directly against the interest of the jobber. What the jobber wants is a stable market. Now if he goes to the manufacturer and places a large order on the guarantee of prices, suppose prices go up? Then what is his guarantee good for? He does not expect the manufacturer to raise his prices if prices go up. Now the point I want to make is this: If a jobber goes to the manufacturer and buys a large lot of material, a great deal more material than he can sell in his territory on the strength of the guarantee of prices, he has got nothing to lose, and if prices go up, he has everything to gain; and then he brings about this very trouble that Mr. Ireland is talking of, that is going into another jobber's territory and unloading a lot of goods that he bought unnecessarily. Mr. Chairman, I believe that every order should stick. (Applause.) I believe that every order placed by a jobber should be upon an absolute contract, and he ought to be compelled to take it, and ought not to be allowed to cancel an order. Now if the jobber understands that he has got to take the goods that he bought—the excess quantity of goods, if you please—if he understands that he has got to take that, he is not going to place such enormous orders and expect to unload them on some other jobber in a different section. He

hopes by some chance that the price on that article will go up and he will make some money, and if the price goes down he don't take the goods. Now I believe that most of the jobber's troubles in this particular line have been brought on by himself, and I, for one, would be very glad if every manufacturer would get together and say that a contract is a contract and an order is a contract, and they will have to take what they buy regardless of the price, whether it goes up or goes down, and I believe that would do more to prevent the demoralization of prices than anything else.

CHARLES H. IRELAND, OF EXECUTIVE COMMITTEE.

George W. Lee, representing the Eberhard Mfg. Co., Cleveland, Ohio, then addressed the Convention on the subject which had been allotted to him,

"The South, Socially and Commercially."

ADDRESS OF GEORGE W. LEE.

Gentlemen of the Southern Hardware Jobbers' Convention:

It affords me pleasure to again be with you here on the occasion of this, your eleventh annual gathering.

This is my third privilege of meeting with you. First, at Atlantic City; then Old Point, and now at this, a most beautiful spot, amid the mountains of North Carolina, or, as it is often called, "The Land of the Sky."

I do not know where in all the Southland you could have found a better place to have gathered. Here, there is plenty of pure, fresh and invigorating air; beautiful landscape scenery, and a place where man can commune with himself and the great handiwork of God in nature. Here you can rest from the labor and business turmoil of the past year, and gather anew strength and information for the oncoming battle of the year to follow.

One year ago I was a strong advocate for the holding of this, your Eleventh Annual Convention, in the city of Cleveland. A most hearty invitation was extended to you by municipal, social and manufacturing organizations. They would have entertained you at our many clubs and theatres in a royal manner; given you boat rides on the lake, drives through manufacturing districts, and beautiful parks. Our business men would have taken great pleasure in showing you through manufacturing plants, many of them who can count their employees up in the thousands, and many of them whom you are acquainted with in a business way, and have been buying and selling their products for several years past. It would have been a great pleasure and benefit to both, you as jobbers and they as manufacturers, to have met each other and become more intimately acquainted.

However, your Executive Committee decided otherwise, and here we are. Allow me to say further, in behalf of your Northern friends, who extended to you the cordial invitation to hold this meeting in their city, "They harbor no ill-will or ill-regard toward you for deciding adversely to their wishes. But instead, on the part of the manufacturers, the invitation is still open and holds good for you to come, either as a body or individually any time you may wish to accept.

Their doors will be kept open, a brotherly hand will greet you; you will be made welcome, and to realize that while you are far from your Southern sunny homes, yet you are with and among friends."

I was very much surprised when I received word from your Secretary informing me that I had been selected to give a fifteen minutes' address to this Convention. My first thoughts were—"What have I done to merit such reward? But, on reading the letter over the second time, I saw it was the wish of the Executive Committee. Then the thought came to me: "What have the Association done that they should be bored by having to listen to what I might have to say?" I could hardly understand what motive they had in their selection, unless it was to punish me for the active part I took in trying to induce this Association to come North. However, as I have accepted their invitation, and you have the patience to bear with me, I will try to say a few words on the subject assigned.

"THE SOUTH, SOCIALLY AND COMMERCIALY."

*Socially.*

Allow me to say that the Southern people are well known throughout the North, for being friendly, social and very hospitable, and Southern men, for showing great respect and regard for their women. I have attended conventions in different parts of the country; but no place where there is as much attention given, and courtesy extended for the welfare and social entertainment of the ladies, than by the members and friends of the Southern Hardware Jobbers' Association. This one theme, *care, comfort* and entertainment (for them) has always been uppermost in your minds in selecting a place to hold and in attending the Convention. These remarks do not only apply to the members and friends of this Association; but are applied to the entire South. Wherever one goes through the Southland, they meet with the spirit of social fellowship and good cheer; no matter whether it is amid the green fields of Virginia, the piney woods of Georgia, the cotton belt of Alabama, the oil fields of Texas, or the blue grass of Kentucky—the result is the same.

Gentlemen, this spirit of social fellowship is not only confined to the South; but extends far beyond the boundaries of the Southland. As one stands facing the North, looking either eastward or westward, he can easily observe the growth of social and fraternal fellowship and the onward march of a great army—"The Brotherhood of Man." What a grand thought it is, as we stand on the threshold of the Twentieth Century, and in one of the greatest and grandest countries on the globe, and recognize the fact that there is no longer a North and a South; but that we are one and inseparable—that my flag is your flag, and that the sons of those who wore the gray and the blue are now standing side by side, maintaining the sovereignty of our flag and nation before the world.

No higher testimony of this social feeling could be given than is contained in this clipping I have taken from a New York paper under date of May 17th, a tribute from a Southern woman to Mrs. McKinley when she was lying almost at death's door a few weeks ago. She said:

"The President's sorrow is shared alike by *North, South, East and West*. None feel for him more keenly than do I, and none prays more earnestly for his wife's recovery."

The author of this grand tribute is one whom we all know and love—Mrs. Jefferson Davis.

*The South Commercially.*

Of this part of my subject it is almost useless for me to say anything as all of you know of the rapid strides the South has made commercially in the past ten or fifteen years much better than I.

My first trip South, in a commercial way, was some fifteen years ago, when passenger trains seemed to be running over the ends of ties, than over the solid hundred pounds connecting rails of to-day; when Pullman coaches, with double glass windows, for keeping out dust, were a curiosity; when air brakes and automatic couplers were unknown. The dining car of to-day—the traveler's friend and delight—where was it? Echo answers "Where?"

Gentlemen, stop and think of the railroad advantages and comforts of to-day compared to those of the past. Ofttimes we think the railroads take undue advantage of us in passenger fare and freight rates; but is there one of us who would like to return to the primitive way of railroading of years ago? I answer "No." Railroads have done more for the South, commercially, than any other agency in the hands of man.

With climatic and natural resources of boundless wealth at your door, where would be the great developments of coal,

iron, stone, lumber, and the products of the field and factories of the South if it were not for railroads? Where would be the cities and towns of the South that you take great pride in? Do you think that the city of Birmingham, the great iron centre, would be able to make and set the price of pig iron at home and abroad if it had no railroads? "No." But to-day, with this advantage, cheap labor, and mild climate, she has this power.

You can settle your mind on these facts, that wherever you see the puffing, steaming railroad engine drawing its loads of human or merchandise freight, that in its wake comes industrial enterprise, commercial success, happy homes, contented, well-clothed, and well-fed people.

As one travels through the country he sees thrift, enterprise and expansion on every hand, and at once realizes the fact that the South is fast entering the commercial field in competition with the North, and that both, to-day, are eager to compete in the markets of the world for trade. Nothing would help the South so much to-day, commercially, than the building and completion of the Nicaragua Canal. It would mean lower freight rates to the Pacific coast and the far East markets; the enlarging of Southern ports, increase of manufacturing in various lines; more money; better wages; home consumption and conditions in the city town and farming districts.

The manufacturing development of the South has and will do much to help the industrious young man, both commercially and technically. There are, and will be, demands for men who understand their profession and trade thoroughly, and who recognize the fact that the success of their employer's business means their own advancement and success.

Therefore, let us all do our part in the great drama of life, both socially and commercially.

Gentlemen, I thank you.

Mr. Lee's paper was received with every mark of approval, and was followed by Thos. W. Fritts, of the Tom Fritts Hardware Co., Chattanooga, on the subject of "Classified Lists vs. Quantity Discounts."

ADDRESS OF THOMAS W. FRITTS.

Gentlemen of the Southern Hardware Jobbers' Convention:

Some weeks ago I received a very polite and innocent looking letter from our worthy Secretary-Treasurer, asking me to open the discussion at this meeting upon the question of "Classified Lists vs. Quantity Discounts." Without realizing the full scope and importance of the question, I said yes, and I now realize that saying yes has gotten many a poor soul into trouble as well as myself.

I am, indeed, sorry that some one with ability and wider experience was not selected for this most important duty.

Quantity Discounts: Special privileges to a special few, is the cause of *overbuying, underselling and demoralization of the market*. Why, gentlemen, it is a premium offered by the Manufacturers' Association for the unsettling of prices; true, it was not intended by them to be so, but once this mighty power of special favors is given into the hands of a favored few, the producer ceases to control the price of his product. They have transferred that right to this favored child of fortune, and what he will do to them will be a plenty. He chuckles to himself and says, "I will use this special privilege, not as a profit already made, but I will give it away;" and why? For the purpose of drawing trade from others, not in a fair business way and upon business principles, but having received this special favor, I am enabled to sell my staples at what they cost many of my competitors, and by doing this, I will be able to draw orders for Shelf Goods, Cutlery, etc., that would naturally go elsewhere.

Now we will follow this man of favors home and see what he does. In his private office at home, still pleased with what has been accomplished, he calls his men around him and explains what he has accomplished and tells them we are on the inside. We have been given a *Quantity Discount* on many lines of goods which amounts to as much as the profit usually made on these goods, and what I want you to do is to give this *Special Discount* away, thereby secure the orders of the country merchants for Shelf Goods, Cutlery, etc., on which I shall expect a good profit. The men are delighted, for, be it said to the credit of traveling men, they do like to take orders. So out into the trade they go with the Shillalah of demoralized prices in hand and the way they do lay things out is a caution.

The first round is successful; orders are snatched from the competitors. But then a rallying all along the line by his competitors with or without profit, the less favored meet the

cut, retake the lost ground and make a combined charge upon the manufacturers for lower prices. This combined effort is of greater force than that of the favored few. The reduction is secured, not always directly, but it is secured just the same.

The result: The manufacturer is damaged just the *quantity discount*. The man of many favors is damaged by a demoralized market. The fact is, all concerned have been damaged. If we would follow this man of *Quantity Discount* favors, we will find him back at the feet of the manufacturer begging for further favors and protection. Then if the manufacturer would with righteous contempt tell him to "Begone; you demoralizer of business, I have no specials for you," he could justly say, as the Irishman did when he attended a Methodist meeting. Before going he asked how he should conduct himself, and was told to sit down and be quiet. At the meeting, services began and grew fast and furious as of old, the exhorter pleading for one more soul as only an old-time Methodist exhorter could. Mr. Irishman, feeling an impulse to do his duty and restore order, moves quietly to the side of the exhorter and with a Sullivan thrust, lays him on the floor, saying, "Be quiet, you were the cause of all the trouble." And I say to you, "This *Quantity Discount* is the cause of all the trouble."

For instance, you take the American Steel & Wire Co. in a spirit of fairness. They attempted as masters of the situation to make prices based upon quantity, and this will illustrate the whole question.

Horse and Mule Shoes, 2,000 kegs, 15 cents Quantity rebate. On Nails, one price to the wholesale buyer, another to the carload buyer, and still another to the less than carload buyer.

What is the result? The larger 2,000 keg concern does not intend to make the 15 cents, but gives it away to the buyer of any little quantity wanted. The same rule applies to Nails and Wire. So the favored one has defeated the object of his benefactor.

The concerns that gamble on overbuying know when they place the order that they intend to force the goods on the market at reduced prices. Then why continue the uncatisfactory plan?

It is a hard question to handle; has never been satisfactorily handled, and may never be. But the horse-swapper never keeps a stump-sucker or a spavined horse. He swaps again, and I now advise a swapping of plans. Instead of *Quantity Discount*, I would suggest classifying merchants.

I would classify all concerns employing one or more men for the specific purpose of traveling and soliciting orders, and who do not resort to net catalogues or net price lists, and who carry a stock to supply demands, Wholesale No. 1.

I would classify net catalogues and net price list concerns as No. 2.

A concern that is entitled to wholesale prices is entitled to all there is in it. We have to compete with the same trade and conditions. Discrimination by the manufacturer in favor of the strong is not right. Put all of a class on the same basis and let the best man take the business upon business principles.

Why should we be at war with each other? The prosperity of one is the prosperity of the other. Why should I not rejoice to know that my competitor is making money, for so sure as he is, there should be no reason why I am not.

The truth is, we ought to be a band of brothers, willing to do a brother's part to each other. Who among you, if in a distant and strange city, does not instinctively turn his steps to a Hardware store with the confidence of a friendly welcome and a God speed you on your way? Then why not in our business always remember that we have a friend and brother in this same business, and that we will do no act that will damage him?

At the close of the address James P. Kelly, general manager of the Kelly Axe Mfg. Co., Alexandria, Ind., presented an interesting paper on "The Future of the Trusts," which was as follows:

ADDRESS OF JAMES P. KELLY.

Mr. President, and Gentlemen:

A great preacher once said that his best sermons took fifteen minutes to deliver, his medium sermons, about thirty minutes and his worst ones, twice as long. Duly mindful of this, in discussing the question of Trusts and their future, I will be very brief and mention but one aspect of the case.

This Trust question is a very large one, it is a condition and not a theory. When you Hardware merchants walk through your stores and realize the number of articles which you have to buy, without any option on your part as to prices and terms, the situation may at first seem serious and the future very dubious indeed. But like nearly every other question in this world, there are two sides to it. As a prac-

tical manufacturer, it has occurred to me to call your attention to one aspect of the question, which may afford some comfort to those, who are disposed to take a pessimistic view of the future situation.

In the first place, What is a Trust? In one sense a Trust may be defined as a consolidation of factories under one management, for the purpose of controlling not only the product of these factories, but generally to control the entire market for the goods. Now these different factories all once had a separate, individual existence. Each one was once an entity of itself and almost without exception was built up from a small beginning. I can not in the whole country recall a single large, successful factory that started large. Like nearly everything else, it had to start small, frequently had to fight for its very existence, and only by the inexorable law of the survival of the fittest, is it living to-day.

Now what enabled this factory to grow from a small beginning and become successful? Simply the personal, unremitting toil of some one man. This one man through his close application to this work, through that concentration on his one object in life, caused the small plant to grow and expand. Working by day and dreaming by night, on each detail of his business, it was impossible for competition to thwart him and at last he finds himself at the head of a large concern able to hold his own against all comers. This may be fairly considered as the average story of the factories that now make up the existing trusts.

On the other hand, there are some factories, whose history has been more brilliant than that of the average. Some of these concerns built up and managed by men of exceptional ability, and perhaps favored by natural advantages, far surpass their rivals in the race for the trade and thus occupy a most enviable position.

We now come to the period when so many of these factories surrender their individual existence to become merged into Trusts. We need not go far to see the reason of this. You Hardware Jobbers know perhaps better than any men in the country, what competition between manufacturers means. You also know well what competition between yourselves means. This very Association is in existence to-day as a kind of safeguard against too much of such competition. The manufacturers at first tried similar associations but they did not seem to succeed. The fact is, the competition between manufacturers assumes forms that sometimes become so intolerable, that when the promoter appears with his persuasive tale of vast profits through pools and consolidations, he finds many ready listeners, and the result is, the Trusts. Now the question is, what will be their future? Will they "sink or swim, survive or perish?" And the answer, it seems to me, depends upon their fulfillment or non-fulfillment of at least three conditions.

The first condition is, that the Trust itself be managed with the same ability that its individual factories were managed. Now as to management, it will be admitted that the Trust is greatly handicapped. The factories as a general thing, lose the services of the men who built them up. They also lose the services of able managers and superintendents, who are thrown out by the consolidation. Do these men meekly lie down and starve or let their families starve? Not much. Before the new Trust is fairly started these men are pouring into the ears of eagerly listening capitalists their statements as to how a well managed independent concern can compete with the Trust.

A prominent Treasury official stated in a public interview a few weeks since, that money was now a plethora, and that four per cent. was all that it was worth and that it would probably soon be cheaper. Therefore, when men of real ability lay their plans before capitalists, who are anxious to make more than four per cent. on their money, it is wrong to assume that the fiercest competition will not soon spring up from these men, who are not only desirous of making a living, but also of retaliating upon the concerns that throw them out, if the mistake is made of doing so.

In any event, the factory management goes to some other than the man who built up the business. No matter how capable the new manager may be, it is not in human nature that he should give the same earnest thought and work to his position as did the man who built up the business. Even if he were willing to do so, he is handicapped by the superior authority over him, which is unfortunately in many cases located in some distant city, hundreds or perhaps thousands of miles away. This distant authority is, on the other hand, equally handicapped in the management of the factory by its distance, just as you would be, Mr. Moore, if you had an office in New Orleans and managed your Birmingham busi-

ness from New Orleans. Therefore, it is evident that in order for the Trust to be managed with the same ability that built up the individual factories, a very high order of talent is absolutely necessary.

Genius has been defined as a capacity for hard and conscientious work, and nothing short of genius itself will fill the bill. Unfortunately for some Trusts, it seems that their managers have adopted the idea that their position means, that they are to live in New York and play poker at night and play Wall Street in the day time. I think you will all agree with me that such management can have but one result. On the other hand, a distinction should be made between the Trusts, which produce machine-made goods, such as rails, nails and wire, as against the Trusts, which produce fine hand-made goods, such as cutlery, tools, etc. With the machine-made goods, it may be possible to manage the Trust with apparent looseness and yet make money, because the goods being almost entirely produced by machinery can be automatically made and do not suffer the deterioration in quality which hand-made goods invariably suffer the moment the stringent care of the old personal management is relaxed. I repeat, that this *may* be so, although it is doubtful and I do not know it, but of one thing I am absolutely certain, and that is that no trust that produces hand-made goods can possibly succeed against modern competition unless the same stringent inspection of the quality of the goods is carried out, the same conscientious, close management in the factories, the same care for the personal welfare of the employees, that characterized the old days is observed.

Right here is where an element of danger lies for such a Trust. In goods where the high quality of the work is everything, and where skilled hand work is essential, there is a constant tendency toward deterioration in quality unless an equally constant stimulus is applied, to keep it up. This stimulus must come from the highest in authority and go down the ranks. The very moment that the slightest relaxation from headquarters takes place it is felt throughout the entire system and the inevitable result is a let up in the quality and a loss of trade and consequently an opportunity for an independent competitor to gain.

The second condition is, that the jobbing distributors shall be properly protected. The Trust making goods that are usually distributed by jobbers, that attempts to ignore their interests is just as sure of failure, as the future will come. In no other country is the jobbing business so highly developed as in this. With enormous capital invested, with expert managers at the heads of the many great houses in all parts of this vast country, it needed only one thing to perfect this wonderful system of distributing goods, and that was the formation of the Hardware Associations. They bind together the great houses in a "community of interests" that make it an act of folly for any Trust to antagonize them. This is such a self evident proposition that it need not be dwelt upon.

The third condition is that the consumer shall be benefited and not burdened by the formation of the Trust. It has always seemed passing strange to me that these modern Trusts have not taken heed to the policy, which seems to have always actuated the brilliant management of the Standard Oil Co., in this respect. So far as I know, this policy has always been to keep down the cost of goods to the consumer. Their profits seem to have been made in other directions than exacting increased taxes from the consumer. However, some of their methods may be criticised, there can be no question of the genius of the management in this respect.

It is extremely inconsistent, to say the least of it, for a number of concerns to consolidate into one, claiming that they can greatly save expenses by doing so, and then at the very first move to advance the price of their goods to the consumer. This is so palpably wrong and approaches so nearly to attempting coercion and tyranny, that the utmost resentment is caused by it.

If there is one thing fully developed in the nature of the people of this country, it is that of being utterly and thoroughly opposed to coercion in any form. The great P. T. Barnum once said that the American people loved to be humbugged, but this very element in our national character that enjoys a joke on ourselves, is the best proof in the world that we would resent to the utmost any attempt to unduly tax us, and when the Trusts in the face of decreased cost of production attempt to put on the screws and try to tax us, it is hardly necessary to say that the same spirit which resented a similar attempt by Great Britain when we were a small and feeble colony is still alive to-day, but in a thousand-fold stronger form.

Therefore, I would say in conclusion, that the future of Trusts depends upon their management and upon their treatment of the consumer. If the management of the Trust relies upon its fancied power and ignores the needs of the factories and while "clothed in a little brief authority" attempts to tax the consumer instead of benefiting him, then that Trust is doomed, just as surely as any other attempt at dictation and unjust taxation is doomed, in this great country of ours. But if the management is able and the cost of the goods to the consumer is steadily reduced, such a Trust will undoubtedly win the support of the people and be not only a blessing to the country, but also a gold mine to its stockholders.

W. T. Shannon, representing the American Sheet Steel Co., then held the close attention of the Convention by the delivery of the following entertaining and instructive argument for

"UNITY OF ACTION ON PRICES AND TERMS."

He spoke as follows:

ADDRESS OF W. T. SHANNON.

Mr. President and Gentlemen:

It is the fault of your Executive Committee, and not mine, that I am to deliver this address, and I confess that after listening to the excellent addresses by the eloquent orators who have preceded me, that I feel like a lost chord in this harmony of chin music.

My topic, Unity of Action on Prices and Terms, has been the cause of so many noisy discussions, with consequent small results, that it reminds me of a story told by one of your North Carolina Congressmen.

An old negro, riding a mule through a forest one night, was overtaken by a severe storm. Being unable to pick his way, except by fitful flashes of lightning, and becoming alarmed at the peals of thunder that shook the earth, appealed to the throne of grace in this fashion: "O Lawd, if it's jest the same to you, I'd rather hav a little less noise, an' a little mo' light." It is the light we want, and whether or not I can suggest it, remains to be seen.

That there should be a more harmonious understanding among Jobbers with relation to "Price" and "Terms," is a well-known fact.

Prices on staples are constantly being demoralized, and the rule seems to be, not how much can I afford to make, but, how much can I afford to lose.

This condition is not brought about by an innate desire on the part of the Jobbers to sell goods at cost or less, but by a misunderstanding among friends, at least those who should be friends, because their interests are all identical.

This misunderstanding is the result, usually, of a bluff, or more properly speaking, an unscrupulous untruth on the part of a supposed friendly customer, who kindly informs you that he is exceedingly anxious to place a particular order with you, but cannot afford to do so, unless you will meet your competitor's price. Of course, he has confidentially made the same statement to your competitor, and, if you do not know him as he is, the scheme doubtless works, and his bluff becomes profitable to him, to the detriment of your profit and loss account.

Again, there seems to be a ruling desire among some salesmen and Jobbers, for leaders. These people will gladly sell \$100 worth of staples at cost or less, with the hope that an average profit may be made up on the prospective \$50 bill of other articles. A proposition that some time wins, but oftener loses.

Over-stocks have occasionally been the cause, but they are not the ruling commodity these days.

Possibly it is not necessary for me to refer further to the cause of a condition with which you are all intimately acquainted. It is the remedy for this evil that we seek, and I am free to acknowledge, that I could not presume to even suggest an immediate remedy, but I believe, that the future remedy, that I am about to propose, if generally adopted and persistently followed, will do all that it is recommended to do.

The practical remedy, I think, is to add a specified percentage of profit to "Pittsburgh delivery basis" and make your minimum warehouse price, plus freight, from Pittsburgh to destination. This would work no hardship, and one Jobber would have no advantage over another, in his own territory.

Each Jobber, being supposed to have 60-day contracts with the manufacturer for his anticipated wants, a certain percentage could be shipped direct to his customer, where freight rates make it advantageous.

I say a certain percentage as this protects the legitimate Jobber from the man who does not carry stock, but quotes f. o. b. mill or destination, and ships direct from the mill, at a brokerage profit, to the detriment of the dealer who does carry stock.

I think if all the Manufacturers would adopt the plan that direct "less than carload" shipments would be made only for dealers who carry stock, and then not to exceed 25 to 50 per cent. of their contract amount, it would sound the death knell to the dealer referred to, and each Jobber would receive his legitimate trade.

I mention the contract limit as 60 days, as 60-day contracts with spot specifications are equitable, while long time contracts with specifications to follow, are all against the seller. If prices advance, the buyer's stock is always depleted and he insists on the delivery of every pound due him. On the other hand, if prices decline, the buyer's stock is always complete and he cannot possibly make up his specifications, and the seller, after perhaps months of coaxing, becomes disgusted, pockets his loss, and allows the contract to go by default. Of course, none of the latter class of buyers belongs to this Association.

The consolidation of manufacturing interests is, I think, largely solving the problem for the Jobber. These consolidations want the trade of the Jobber and large Manufacturer, and for that reason cultivate them by placing them in a position to sell the smaller trade, who, under the old plan when all manufacturers were independent, bought direct from the mills who were willing to sell the small trade, if they could not sell the large.

This placing of all Jobbers on equal footing by the Manufacturer, insures a confidence among buyers that they are getting the same price as their competitors on leading staples, mill or Pittsburgh delivery basis, if they buy the same quantity, and as there are not a dozen or more representatives of different mills—which all manufacture the same product—calling on them daily, the feeling of uncertainty regarding the daily market is much reduced.

I am aware that in many instances of the past, the "Gentleman's Agreement" has been a failure, but that was when you had no definite idea as to what cost price would be in the next 24 hours. Your purchases were made with uncertainty, expecting that some one would come along the next day with a lower price. The conditions are now different and an agreement could now be more successful.

There is, at the present time, a better opportunity for a more harmonious understanding between Jobbers and Manufacturers than ever before in the country's history, and I think the Hardware Associations will do well to take advantage of the situation.

The Manufacturers, if applied to, would no doubt gladly assist the Jobbers' Association in every way possible, and the success of any advocated plan lies in the hearty co-operation of both Jobber and Manufacturer. Observe the postage stamp, how it sticks to one object until it "gets there," and I believe that if the Jobbers' Association will adopt a plan and stick to it, they will achieve the same result.

Another abuse that deserves earnest consideration is Terms. Terms, 60 days or 2 per cent. cash in ten days. Why, it slips glibly off the tongue of your salesman and office man, but this is merely a phrase, it has no real meaning.

Your customer takes 20 days or even 30 days, and sends you his check, less 2 per cent. Your bookkeeper states the case to you, and you mentally "cuss" the customer, but tell the bookkeeper to send him a receipt in full, as he is a good customer and we don't want to make him mad. Or, perhaps you have been a little doubtful of the financial standing of a certain customer, and, when at the expiration of 30 days he remits less 2 per cent., you know that he is taking the advantage of you, but consider that "a bird in hand is worth two frogs in a pond" and send him receipt in full.

Your customer who takes 60 days, oftener takes 90 days or 4 months and, when you render him bill for interest, he tells you that "Smith & Co." never charge him interest, and you meekly take the face of the invoice and square the account.

As the Manufacturers are strictly enforcing the rules on Terms and Cash Discounts, the Jobbers should do likewise. It is simply a matter of education, and there are enough members of this Association to successfully educate the trade up to the fact that 2 per cent. cash in ten days means ten days, and that past due accounts bear legal rate of interest, or no more goods.

This subject is practically unlimited and so far-reaching that it is customary to discuss it, and then quietly sit down and try to imagine that some how, it will even up some way, as the Boston woman thought when she wrote,

"The Devil sends the wicked wind, that blows our skirts knee high,  
But God is just, He sends the dust that blows in the bad man's eye."

And I think the Almighty from this time on will only help the Jobber who joins this Association and helps himself by a mutual interest in his brother's welfare.

He was followed by T. W. Gathright, now representing E. C. Atkins & Co., Atlanta, Ga., who discussed in a cogent manner "The Differentials Between Jobbers and Retailers" in the following address:

#### DIFFERENTIALS BETWEEN JOBBERS AND RETAILERS.

By what differential should exist between jobber and retailer I understand is meant what margin of profit should exist between the two.

I do not think there is any particular standard of value by which this difference could be measured, for the reason that there are some lines of goods that will admit of a larger margin of profit to both the jobber and the retailer than others, and think the class of goods should determine what differential should exist.

In considering this question, there are, as I think, three parties interested, viz., the Manufacturer, Jobber and Retailer, each of whom is equally concerned.

The manufacturer in making his price to the Jobber should not be too much inclined to take more than the lion's share of the profit, for the reason that "the laborer is worthy of his hire," and should first consider at what price his particular line of goods should go to the consumer, then take into consideration the expense of doing a retail business and fix a price for the jobber that would allow both the jobber and retailer a fair margin for expenses and interest on capital invested in addition to what they are entitled to for their services.

When this has been done and the goods are in the hands of the jobber, then he should not expect to grow rich in a day by taking all there is left, but should make such a price as would bring a fair return for his services and capital.

There is not the least doubt in the world but what the Manufacturer, Jobber and Retailer are equally dependent on one another—the Manufacturer because the expense would be entirely too great to justify him in visiting the Retailer to supply him with what few goods he would want in his particular line, while the Jobber can do so with his large line and do a sufficient volume of business to justify him in doing so.

For illustration, we will say Mr. A. manufactures axes and puts them on the market at a profit of \$1 per dozen. The average Retailer will not buy over ten dozen at a time, so you will see he has made only ten dollars for his day's work, while the expenses and salary of the salesman alone would amount to equally as much if not more; while he could go to the Jobber and sell him 800 instead of ten dozen with the same expense, and it therefore follows that the Jobber is an absolute necessity to the manufacturer.

Since writing this I find that I am entirely wrong, if Mr. C. M. Schwab is to be taken as authority. I have taken from an article by Mr. Schwab in the *Literary Digest* the following:

"And in manufacturing a further saving is effected by lopping off the middleman, who at every step between production and consumption was wont to take a big slice of profit, adding so much to the ultimate cost without adding anything to the value."

The Jobber is equally as dependent on the Retailer because it is to and through him that he expects to sell his goods, and if the Retailer is eliminated the Jobber becomes a thing of the past.

It therefore follows that the three must dwell together in unity and good fellowship, each respecting the interest of the other, so that if either one or the other should fall by the wayside, we could join the illustrious poet in saying:

"You may break, you may shatter the vase, if you will,  
But the scent of the roses will hang 'round it still."

When Mr. Gathright concluded his address Mr. Garland asked the Chairman for one minute's time, which, being granted, he said:

"As a Pittsburgher, I don't like to see one of our best people misrepresented. That part of the gentleman's address relating to Mr. Schwab is probably correct, but it has been misinterpreted. What Mr. Schwab referred to, I have no doubt, was the pig iron broker or factor, who in the past has been acting as a middleman between the furnace and, we'll say, the mill operator—the bar mill, one who was getting his 10, 25 or 50 cents or a dollar a ton brokerage, as the case might be, on a large or small transaction. He certainly did

not refer to the Hardware jobber, a gentleman with whom he has had little business dealing. He cannot, of course, get along without the Hardware jobber. I think, therefore, that justice should be done Mr. Schwab, who should not be put in a wrong light before you gentlemen."

To C. M. Fouche, of the Crucible Steel Co. of America, was assigned the subject of "Combinations," and he presented an extremely interesting paper, which was listened to attentively, upon this important subject. We give the address in full:

ADDRESS OF C. M. FOUCHE.

Mr. President, and Gentlemen of the Association:

I am well aware of the fact that I shall invite adverse criticism from many members of this Association when I assert that combinations are the legitimate offspring of the Jobbers and large buyers of this country. If this assertion is susceptible of proof, then it is equally true that this child of their loins should be fostered and preserved by them.

Up to the beginning of our Civil War, I can find no record of Combinations for the purpose of maintaining or regulating prices, and, as there was at that time no necessity for their existence, it is fair to assume that there were none.

Prior to 1860-70 the manufacturer of this country could invest his capital in various enterprises, with a reasonable assurance of obtaining a fair return upon his investments. The dealer could in turn buy the products of the manufacturer with a feeling of absolute certainty that he would be able to realize a fair margin of profit upon his purchases. Failures were rare, except during a few periods of financial panic, and such as *did* occur were caused by mismanagement, or want of business capacity. The manufacturer, before deciding to embark his capital in an industrial enterprise, would ascertain first: Whether there would be a fair demand for his products, and second: Whether they could be disposed of for reasonable profit. The jobber would invariably base his prices upon those made to him by the manufacturer, add a fair percentage of profit and sell his goods with less effort and with greater satisfaction to the buyer and consumer than at present. In more recent years there has been a marked change in these conditions, with the result that both manufacturers and jobbers have become little less than speculators, and there has been about as much certainty of profit in buying Louisiana Lottery tickets or Cotton Futures, as there has been in the purchase of an ordinary stock of goods by the merchant of the usual supply of raw material by the manufacturer.

I am sure that members of this Association will agree with me that this change in our business conditions has been neither beneficial nor profitable, and that any system which will reduce buying and selling to a more safe and certain basis should demand and receive the cordial support and encouragement of every business man in this country.

I affirm that this change in conditions has been brought about largely, if not entirely, by buyers who are usually ignorant of the actual cost of production, and who are unwilling to allow the manufacturers a reasonable profit over cost. These buyers have been materially assisted by over-zealous salesmen who are ever ready to sacrifice profit in order to secure business, and the result of their combined efforts has been the Combination and the Trust.

It has struck me that the original cause of the jobber's earnest effort to lower prices, has generally been a desire on his part to purchase goods cheaper than his competitors, and that in his endeavor to accomplish this end, he frequently seems utterly regardless of the fact that he may be forcing the manufacturer to sell at an actual loss. This constant and never-ceasing pressure for lower prices has finally resulted in forcing many manufacturers to the wall, and the survivors into agreements to maintain prices for self-preservation. I, therefore, assert without fear of successful contradiction, that the buyer is the true parent of the Combination. The unfortunate result of these efforts on the part of the jobber to take from the manufacturer his last vestige of profit in his endeavor to purchase goods at lower prices than his competitor, is found in the fact that he seldom, if ever, accomplishes his purpose, for it is a rare salesman who will confine these "special" prices to the original beneficiary. He feels that it would be both unjust and unfair to his other customers to place them at a disadvantage with others in selling his goods, and the usual result follows, that his *special* price soon becomes a *regular* one. This constant hammering of prices also frequently brings about a feeling of antagonism between buyer and seller, where only the best of feeling and true community of interest should exist. My

experience has been that the average buyer bases his ideas of cost largely upon the prices he has been able to extort from the manufacturer from time to time, and this is anything but a safe guide, as makers of such staple articles as Iron, Steel, Nails, Wire, "Pony" and "Boy Dixie" Plows, Georgia Stocks and "Dow Law" Cotton Planters can easily testify.

If there was any *real* benefit to be derived from this unreasonable demand for lower prices, there might be some excuse for it, but there is absolutely none. The jobber rarely, if ever, secures any profit from these "special" prices, for he invariably "passes it on" to his customer, and he in turn to the consumer, who has neither asked for nor expected the concession. The manufacturer has, therefore, been forced to surrender his profit without having benefited his customer. The Combination of business interests for the purpose of maintaining profitable prices only came into existence when it became necessary for self preservation, and it is, therefore, extremely probable that it is here to stay. The world has been astounded by the enormous sums which have recently been invested in various industrial and carrying enterprises, and the character and standing of the men who have embarked the bulk of their fortunes in these Companies, give us a reasonable guaranty of their stability for both the present and the future. The failure of one or more of these colossal combinations would cause a financial convulsion, such as the world has seldom seen, and the effects would be so far-reaching and general as to be acutely felt throughout the four quarters of the globe. The interests of these industrial enterprises are so closely interwoven with those of the great transportation lines, as to make them almost identical, and anything which injuriously affects the one, must, of necessity, affect the other. It is, therefore, manifestly to the interest of each to foster and build up the other. Those who are at the head of these gigantic Companies, are men who have fully demonstrated their ability to manage large affairs successfully, and it is reasonable to assume that they will pursue such a course as will popularize the new concerns with the masses, and add to the general prosperity of the country. They are well aware that they can only hope to prosper when the country generally is prosperous. Their policy will, therefore, unquestionably be such as to render prices stable and to secure the good will and support of the jobber and dealer, as it is only through them that they can hope to dispose of their products. Experience has clearly proven that violent fluctuations in prices are alike injurious to both manufacturer and jobber, and that short periods of inflated prices are invariably followed by long periods of corresponding depression and loss. We can, therefore, reasonably look for a considerable period of stable prices and fair profits in business for the future.

It will be left to the jobber in many cases to determine whether it is to his best interest to patronize the large Combinations and thus aid them in maintaining stable and profitable prices or encourage outside competition, which almost invariably results in uncertainty as to prices, and a corresponding uncertainty as to profits.

We would do well to remember that efforts to break up combinations by patronizing outside manufacturers, usually result in such concerns being bought up by the Combinations, or a protracted period of price cutting, which is injurious alike to both buyer and seller, and which invariably terminates in "the survival of the fittest." Should the fortunes of war eventually declare in favor of the stronger concern, experience has shown us that the losses sustained by them will have to be made good by advancing prices for a considerable period. This being the case, I fail to see where the jobber or consumer has been materially benefited by purchasing his goods at lower prices from outside concerns.

While I do not anticipate or predict a "Business Millennium" under the new order of things, I am firmly convinced that we are just entering upon a period of the greatest and most general business prosperity that this country has ever known, and that the future will prove that there is a true and lasting "Community of Interest" between the Combinations of manufacturers and those older and more powerful Combinations known as the "National" and "Southern Hardware Jobbers'" Associations.

The next address upon the programme was presented by Geo. H. Harper, of Clendenin Bros., Baltimore, on the subject of "Southern Trade and Expansion," speaking as follows:

ADDRESS OF GEORGE H. HARPER.

Mr. President, and Gentlemen of the Southern Hardware Jobbers' Association: You have selected a very beautiful spot to hold your Convention this year, and the manufacturers

and their representatives whom you invite I feel sure accept the invitation with much pleasure. They all recognize the importance of these meetings.

Your Association, I am told, started with some nineteen or twenty members, and at this meeting you have a membership of seventy-five. You are to be congratulated upon this splendid showing. There is one little thing, while on this part of the subject, that I would like to speak of; it is this: The manufacturers and Boards of Trade in some of our large cities have recognized the personal makeup and strength of your Association and you have been invited to meet in some of these places. Cleveland manufacturers this year were very desirous of having you meet in their city. But, with one exception, you have stuck close to places in your territory. I am sure that, should you decide in the future to accept an invitation to some of these large manufacturing cities, you would have just as large an attendance, and I think, a very profitable meeting. It will be a help to you to see how some of the large manufacturing plants turn out their products and the systems used in preparing your orders for shipment. You would, I believe, find it interesting, and the knowledge there gained prove of practical value. This is one way of applying expansion: Try it on. But what I have in mind especially is YOUR TRADE.

#### THE GROWTH OF YOUR BUSINESS IN THE LAST FEW YEARS.

The growth of the South has been phenomenal and the growth of your business is due entirely to the growth of your section. It seems that some manufacturers in the East and North have also recognized this, and have sent their representatives outside of their regular field, seeking trade where they have not heretofore had it, and resorting to methods of selling goods which are at least subject to criticism. No manufacturer can successfully expand in that direction. The large manufacturers will tell you that the jobber is a necessity, here to stay and bound to be considered at all times. While, at times, he has ample reasons to kick, yet he is not always kicking. He is the manufacturer's good friend and should be protected. And right here, along this line, there is a question I know to which you are giving some thought, and that is: "What protection are the jobbers to receive at the hands of these great Combinations?" I asked an official of one of these big corporations what were his ideas on this subject; he said, in part, as follows:

"I will tell you that, had we not consolidated, it would have been simply impossible for us to establish or maintain the difference in prices now in effect between the retailers and the jobbers. Heretofore, when our salesmen would go to a fairly good buyer in a city and quote prices, it was generally at the jobbing prices, particularly if they bought in case lots. This was done because our competitor did the same thing. A consolidation of a number of manufacturers into a large corporation gives the opportunity to maintain the prices to the different grades of buyers, which was not possible in the old plan. The large corporations will put this into effect and operation as long as the jobber shows a disposition to co-operate with the manufacturer and support him. It is evident that, by working with the manufacturer, the quality of the goods will gradually improve and the profits can be kept up on a better basis than it was possible when there were a number of manufacturers in the field and all of them competing for the jobbing and retail trade."

#### REGARDING THE PROGRESS OF TRADE.

Only a few years ago the Southern jobber had to send his orders to the Eastern and Northern manufacturer for nearly every article he wanted. This is not the case to-day. Instead of sending from a thousand to two thousand miles away, he is buying some of these almost at his own door. The bulk of the manufacturing is carried on in the North, but this does not imply that it will or always should be so. I sincerely believe that, in the course of the next few years, you will see in the South manufacturers of nearly every kind of article that is now being made by makers in other sections. It is no secret that skilled labor is not as plentiful in the South as it might be, in view of the opportunities which are afforded for its employment. In due course, however, as manufacturing plants continue to increase, there will be larger additions to its industrial population.

In 1866 there was not a cotton mill in the South. This industry has since grown by leaps and jumps. In this, during the last five years, the North has stood still; in the South it has increased 86 per cent.

In the year 1890 there were 1,550,000 spindles and 36,300 looms.

In the year 1896 there were 2,000,000 spindles and 70,000 looms.

In the year 1900 there were 4,700,000 spindles and 110,000 looms.

The cotton makers of the South ought to be the best kind of commercial expansionists, especially in the extension of our trade abroad—and why? I will quote a few words from Mr. Rounseville Wildman, the late United States Consul-General at Hong Kong:

"If properly placed before the Chinese, American cotton goods will obtain the same foothold in Southern China that they have in Northern. The present importations are not nearly sufficient to meet the requirements. It must be borne in mind that the Chinese never wear wool, not even in the

G. W. BARNETT, OF EXECUTIVE COMMITTEE.

depth of Winter, but clothe themselves in cotton all the year around. Their bed clothes, umbrellas and, in many cases, boat sails are made of cotton, and the consumption is practically unlimited if made in accordance with native requirements."

Nothing more striking illustrates the progress of the South than its railroad construction. In fifteen years 25,000 miles were built, and thousands upon thousands of dollars expended upon them. In fifteen years the production of pig iron increased from 397,000 tons to 1,900,000 tons, and in the same time the coal production increased five-fold. It is true that a good deal of the capital for the Southern enterprises comes from the North, but the greater part represents the savings of the Southern people themselves.

History does not furnish any parallel to this recovery of a people from absolute ruin.

The Southern manufacturers, the Southern jobbers and the Southern people generally entered the new century in a splendid and healthy state. That section of this great and growing country is becoming a factor of great and permanent importance in the equation of the industrial future of the United States, and its prosperity is a sign of National health in which all classes find cause for congratulation.

The subject of "The Traveling Man—A Welcome Visitor?" was discussed by A. P. Duncan, of McLendon, Duncan & Co., Waco, Tex., and was thoroughly enjoyed by the delegates present. We present the same herewith:

The President—As I said to you yesterday, we at one time thought that the traveling man would have to go when these great combinations began to consolidate, that they would have control of the products, and everybody would have to come to it, but we have discovered that there must be a mediator, and that the living voice is the best medium yet found, and now we will have A. P. Duncan to tell us about the traveling man in working business for the jobbers.

#### ADDRESS OF A. P. DUNCAN.

Mr. President, Ladies and Gentlemen:—I have not prepared a speech. I am not a public speaker. It nearly scares me to death to get up and say anything in public. I have not prepared a paper either for the reason that I could not prepare one to my satisfaction. I tried a little bit, and I decided I was not an author, and I believe that if I were to write a paper I would be so excited that I could not read it. So I will say to my traveling brethren, "the boys" as I call them, that if I say anything that is worthy of reprimand or a

thrashing, why, you may know and feel that it is not premeditated, that it is just the inspiration of the moment.

Now I desire to consider this traveling man from two standpoints, that is the fact of the traveling man being welcome or otherwise from two standpoints. The first is a social standpoint. The South is perhaps more familiar with the true meaning of the word "welcome" than any people on earth; they, I think, understand the true meaning of the word, and practice that meaning more thoroughly than any people that live. (Applause.) Whether it is our climate, or our training or our parentage or our soil, or whether it is all these combined that makes this true, I am unable to say, but nevertheless it is true. The matter of welcome or hospitality you might say is born in the bones of the boys and girls that are born and reared in the South. They love to meet their fellow men and mingle with them, they love to entertain them, they love to do everything along the line that is hospitable, that is noble and grand. Therefore, the weary traveler as he goes to and fro over our land "seeking whom he may devour" finds the welcome hand. The word welcome is written over every door, and he becomes our friend. There is a very close relationship that exists between the traveling salesman and the merchant, and particularly is this true in the South by reason of this peculiarity that I have mentioned of the people in the South.

You may take a man, though he be born in New England or the New England States, capable of resisting everything that welcome would mean, and allow him to travel in the South for a few years, and he changes. The characteristics of the Southern people and the Southern merchants are such that they remould them and they become one of "the boys." This social relationship is valuable. It ties one to the other. They visit us from time to time and they are really the men from whom we buy. The traveling man appeals to us with his personality with that friendship and regard that we have for him. We believe any statement that he makes to be true as a rule, because we know him; therefore, as a friend socially as man to man and heart to heart, he is welcomed by the merchants of the South. He is entertained in our club and at our homes; therefore, the social relationship that springs up between us makes us happy and does us good, makes us better, and aids us in the commercial and business relations of life.

But how to avoid him from a commercial standpoint is a somewhat different proposition. There are men traveling in a territory and they go in to meet customers and dealers, but the dealers meet them, and they are glad to see them, but they cannot do business with them. Now there is a distinction. He is your friend, perhaps, and you like him, but when it comes down to a business proposition, you cannot do business with him. There are some reasons for that. They are various. Sometimes one thing and then another. But, as a general rule, the traveling man in a social sense is always welcome to our places of business, and to our cities and towns as a social friend. He should be in a commercial sense, and would be if he were the proper man, representing the proper house, with the proper goods and with the proper prices. Now to illustrate what I mean: Take the man from whom you have been buying goods for years and contributing to his salary and livelihood, by reason of his position depending upon his success on the road, whom you have learned to love, and you thought loved you, but whom you found to be an instrument in building up conditions that are detrimental to you. Now, in our section a certain line of goods is being marketed thoroughly by the wholesale jobbers of our State. Every part of the section is covered at least once a month or oftener. The ground was thoroughly covered, and no more of the goods could possibly have been sold, because they were thoroughly and completely represented; still, this friend of mine (he thinks he is a friend of mine, and I thought so) induced a large grocery house to take up the goods and handle them. I asked him why he did it, and he said, "Well, these people wanted to buy and I just sold them." Now it don't make any difference what that man might say to me, he would not convince me that he was a friend of mine for business purposes. I like him socially, but I do not care to do business with him.

Another man representing a line of goods that has always from time immemorial been handled by the Hardware trade, comes in the territory and puts them out in a different channel of distribution. You jobbers all realize (I do not think the manufacturers do; I wish to God they did) that wholesale grocers in the South are the worst "proposition" we have got. They have no more idea of the legitimate profits that Hardware should bear than the man in the moon. They look at it from a different standpoint entirely. Now this man representing a line of goods that the Hardware people

have kept before the Hardware dealers for about forty years, will go around through our State and enthrall the wholesale grocery business to handle these goods. The traveling men representing the factories are almost altogether responsible for the wholesale grocermen taking hold of these goods. That gentleman is not a welcome guest at my place of business, for business purposes, and should not be at any jobber's that has any respect for himself. (Applause.)

I am not there for the purpose of accommodating the manufacturers that desire to sell, but I am there for the purpose of making money, and we should have claim on these traveling men to treat us at least half way right. Now, when it comes to digging into our business, when it comes to placing goods in illegitimate channels, I think we should do that; but I have no desire to treat other traveling men that way who do not do that. I think no traveling man has any right to claim my business after he does that.

Another thing is that some traveling men abuse the confidence about a man's private business. If I am invited into your home as a guest and a friend, and am entertained there accepting your hospitality, and while there I notice something that is of a private nature, and does not concern me at all, and I go out and criticize it and repeat it—wouldn't you say it was very ungentlemanly and very wrong?

So it is with a traveling man that will go into a man's office and by chance see some private papers that he knows to be private; that he knows to be of such a nature that if they were made public it would be hurtful to him, not only hurtful to him, but that he knows would be hurtful to the general jobbing trade; that he knows would be hurtful to every man that he is selling goods to; still, he will take advantage of that opportunity and take that information and report it in such a way as to bring about just such injury as I have suggested. That man is not welcome to my office; he is not welcome to my place of business.

I can enumerate a few other instances, but I regard it as unnecessary.

I want to say in conclusion, however, that traveling men are welcome. No one knows that better than they. They know that they are welcome in every sense of the word, and the large majority of them are gentlemen of the very first water. I do not believe that you could get an aggregation of the same size as our Southern gentlemen, traveling the South, I do not believe that you could get the same number of men together anywhere and have them more representative and more perfect gentlemen in every sense of the word than they are. We appreciate them, and like to do business with that class of men. Our relationship with the traveling men is very close, and they are our friends. We talk confidentially to them; they give us information that is valuable; we give them information that is valuable, and they are practically the people from whom we buy the goods. There are lots of traveling men on the road to-day, that if they were to change lines, I would change with them. Lots of traveling men are that way, and they all should be that way. (Applause.)

Mr. W. H. Kettig, who was to have spoken on the subject of "The Traveling Man—A Welcome Visitor?" had been unable, owing to press of business, to prepare an address.

Following Mr. Duncan's address, T. James Fernley, Secretary-Treasurer of the National Hardware Association, in a few well chosen words invited the delegates and manufacturers present to the national convention, which is to be held in Cleveland, Oct. 9, 10 and 11. In behalf of the people of Philadelphia, Mr. Fernley also extended an invitation to those present to attend the Southern Industrial Convention, which is to be held in Horticultural Hall, Philadelphia, June 11, 12, 13 and 14.

#### THURSDAY MORNING

was devoted to an Executive session, in which the discussion of Committee Reports was one of the principal features.

J. H. Fall, Jr., vice-president of J. H. Fall & Co., Nashville, delivered an address entitled, "Who Shall Do It, and How Should Traveling Men be Posted as to Prices?" It was a very instructive and entertaining paper, to the preparation of which considerable careful thought had been given. We hope to print it in full in the next issue of *Hardware* as a special article.

Impromptu reports of several committees were also given. Another executive session was held at 3 p. m., at which the following resolution was adopted:

We, the Hardware Jobbers of the South, carrying large stocks at various jobbing points throughout this territory, employing a large corps of traveling salesmen, do request that Manufacturers continue to recognize us as the proper medium of distribution, it being generally admitted that the

goods can be more economically distributed through us than in any other manner.

During the forenoon, those who could not find room in the carriages Wednesday, enjoyed the drive over Biltmore, and during the afternoon drives were taken to Sunset Mountain and other points of interest.

#### THE BANQUET.

On Thursday evening a banquet was given in the dining room of Battery Park Hotel by the manufacturers and their representatives, at which about 350 were present, including a large number of Asheville people. Many ladies honored the occasion with their presence, their handsome faces and beautiful gowns adding much to the beauty of the scene.

The following menu was served:

#### MENU.

Cream of Tomatoes		Sherry
Spanish Mackerel, Maitre D'Hotel		
Potato Anglaise		Sauterne
Tenderloin of Beef, Champignons		
Sweetbreads en Croustade		
Chicken, Roasted, Giblet Sauce		Spaghetti au Parmesan
Mashed Potatoes		Mumm's Extra Dry
Rice		Green Peas
Vanilla Ice Cream		Apollinaris
Assorted Cakes		
Cheese		Crackers
Coffee		Cigars

After singing "America," President Moore introduced as the Toastmaster of the evening, Henry B. Lupton, of Pittsburgh.

Col. Eshleman, of New Orleans, first spoke in welcome to the guests. During his remarks he suggested that the National Hardware Convention of 1902 would very likely be held in New Orleans, and to which he extended a hearty invitation to all present.

R. R. Williams, of *The Iron Age*, New York, in a humorous speech, also welcomed the guests of the evening.

"Asheville" was the subject of the address of Chairman Irby Bennett, who received his usual ovation.

Daniel Stern, of *The American Artisan*, Chicago, very ably handled the subject, "The Potency of the Press."

The very peculiar subject, "Fishhooks" was assigned to Hon. Webster R. Walkley, of New York, who, from this apparently meagre text, evolved a very interesting address, the moral of which was—"Bait your hooks in business or love with frankness, kindness and truth."

T. James Fernley, Secretary-Treasurer of the National Hardware Association, of Philadelphia, concluded the evening's festivities with a number of side-splitting stories.

#### FRIDAY MORNING.

In Executive session, Spencer James, of the Piedmont Hardware Co., Danville, Va., read a paper on "Best Methods of Employing Traveling Men," and was followed by the delivery of another paper on the same subject by Robert F. Bell, of the R. E. Bell Hardware Co., Weatherford, Texas. The reading of these papers resulted in a general discussion of considerable interest.

James J. Mandlebaum, of Fones Bros. Hardware Co., Little Rock, Ark., held the attention of the delegates by an address on "How Can We Make Staples Bear Their Proportion of the Expense of Doing Business?" His familiarity with the necessity that exists of encouraging some general plan to accomplish this object made his arguments more interesting than was anticipated, as was evidenced by the discussion evoked.

At the concluding session on Friday morning, it was considered desirable to clean up all business of a miscellaneous character, which included final reports of special committees, which was accomplished, succeeding which came the election of officers for the ensuing year, which resulted in the election of the following:

#### OFFICERS ELECTED.

President,
J. D. Moore,
Moore & Handley Hardware Co., Birmingham, Ala.
First Vice-President,
F. A. Heitman,
F. W. Heitman & Co., Houston, Texas.
Second Vice-President,
Bruce Keener,

C. M. McClung & Co., Knoxville, Tenn.  
Secretary-Treasurer,

C. B. Carter,

Russell Building, Knoxville, Tenn.

Executive Committee,

W. M. Crumley,

Beck & Gregg Hardware Co., Atlanta, Ga.

B. F. Eshleman,

Stauffer, Eshleman & Co., New Orleans, La.

O. B. Barker,

Barker-Jennings Hardware Co., Lynchburg, Va.

Chas. H. Ireland,

Odell Hardware Co., Greensboro, N. C.

#### REPORT OF COMMITTEE ON RESOLUTIONS.

Your Committee on Resolutions beg leave to report as follows:

*Resolved*, That the thanks of this Association are hereby tendered to the President, J. D. Moore, and the officers associated with him for their faithful services rendered in the interest and welfare of our organization during the past year;

*Resolved*, That a hearty vote of thanks be extended to our gentlemanly host, E. P. McKissick, who, in his effort to please has left nothing whatever undone that might in any way conduce to the pleasure of those in attendance upon this convention. He has gone far beyond the requirements of the ordinary host, who is only expected in a general way to look after the comfort of his guests, and by his gentlemanly and courteous manner and close personal interest in all things pertaining in any way to the pleasure or comfort of those in attendance upon this, our eleventh annual gathering, has endeared himself to every one and will long be remembered as the ideal host.

*Resolved*, That the thanks of this Association be tendered to our worthy Sergeant-at-Arms, Henry H. Beers, than whom there are none better. He has almost without an effort been able to keep perfect order without even so much as a Gatling gun or a stuffed club; his winning smile and genial manner having won the hearts of all and making it a pleasure to at all times do his bidding.

*Resolved*, That we tender a vote of thanks to T. James Fernley, who has graced our meeting with his presence, and who has spoken many words of wisdom, that if taken advantage of, will accrue to our mutual benefit.

*Resolved*, That we tender to the ladies in attendance a special vote of thanks. They are the sweet and inspiring spirits to whose influence we are pleased to succumb after business and business affairs are disposed of for the day, and without them our meeting in a large degree would be a failure.

*Resolved*, That we thank the Manufacturers and their representatives for their presence, in goodly numbers, and extend to them a cordial invitation to meet with us again one year hence.

*Resolved*, That a hearty vote of thanks is extended to the Chairman of the Entertainment Committee, Irby Bennett, and his able corps of assistants for their untiring efforts in behalf of all present. There hasn't been a dull moment since our arrival, and the fact is largely due to the splendid work of this Committee.

*Resolved*, That we thank the members of the trade papers for their attendance and interest and words of friendship and good cheer.

*Resolved*, That we thank the local Hardware dealers for courtesies extended.

*Resolved*, That we thank the Asheville Club for their kind invitation extended to visit their club rooms.

*Resolved*, That a special vote of thanks is extended to the local ladies' entertainment committee, who spared no pains in their efforts to add to our pleasure.

*Resolved*, That we thank Henry B. Lupton for the gentlemanly and able manner in which he presided over our banquet.

*Resolved*, That it is our pleasure to extend a vote of thanks to Louis M. Bourne, Asheville's orator, who so felicitously entertained us during our first day's session.

Respectfully submitted,

A. P. DUNCAN,  
PAUL R. HOWARD,  
F. B. DUNLAP,

Committee.

Committee on Memorials reported on the deaths of the following members:

W. E. Gibbins, Woodruff Hardware Co., Knoxville, Tenn.  
H. W. Palmer, Palmer Hardware Co., Savannah, Ga.

Cartwright Eustace, A. Baldwin & Co., New Orleans, La.  
E. C. Atkins, E. C. Atkins & Co., Indianapolis, Ind.  
Memorials were ordered spread in full on the minutes and copies distributed to the press.

Selection of place to hold next convention was left to the Executive Committee for decision at a later day.

The convention then adjourned.

Friday afternoon was given up to a clay pigeon tournament which was held at Riverside Park, and in which a large number of both guests and delegates participated.

#### REGISTRY.

The following list of names were recorded in the Registry Book, which was in charge of Sergeant-at-Arms Henry H. Beers:

- F. B. Dunlap, Fort Smith Ark.; Speer Hardware Co.  
Mrs. F. B. Dunlap, Fort Smith, Ark.; Speer Hardware Co.  
S. H. Taylor, Philadelphia; Merchant & Co.  
H. F. Reese, Baltimore; Fairbanks & Co.  
Mrs. H. F. Reese, Baltimore.  
T. H. Keller, New York; Peters Cartridge Co.  
W. G. Thomas, Memphis, Tenn.; Thomas, Barnes & Miller.  
T. L. Collings, Memphis, Tenn.; Norfolk & Western R. R.  
T. P. Johnson, Little Rock, Ark.; Fones Bros. Hardware Co.  
A. E. Bolles, New York City; *Hardware*.  
H. W. Cortes, Houston, Tex.; Berry & Cortes Hardware Co.  
Miss Edna Cortes, Houston, Tex.  
Geo. J. May, Washington, D. C.; F. P. May & Co.  
G. M. Landers, New Britain, Conn.; Landers, Frary & Clark.  
F. M. Huggins, New Britain, Conn.; Landers, Frary & Clark.  
T. H. Gossett, New York; Peck, Stow & Wilcox Co.  
Newton Kilsey, Evansville, Ind.; N. Kilsey.  
G. B. Hobson, Richmond, Va.; The Tredegar Co.  
F. A. Heitman, Houston, Texas; F. W. Heitman & Co.  
J. D. Moore, Birmingham; Moore & Handley Hardware Co.  
G. W. Barnett, Montgomery, Ala.; G. W. Barnett & Son.  
O. B. Barker, Lynchburg, Va.; Barker-Jennings Hardware Co.  
C. B. Carter, Secretary-Treasurer, Knoxville, Tenn.  
John J. Mapp, Baltimore, Md.; National Enameling & Stamping Co.  
Mrs. John J. Mapp, Baltimore, Md.  
Daniel Stern, Chicago; *The American Artisan*.  
Miss Bertha L. Stern, Chicago.  
Geo. H. Harper, Baltimore, Md.; Clendenin Bros.  
Irby Bennett, Memphis; Winchester Repeating Arms Co.  
Frank M. Cory, Cincinnati; National Lead Co.  
William H. Cole, New York; Tower & Lyon.  
Mrs. William H. Cole, New York.  
Arthur S. Jones, Memphis, Tenn.; Indiana Mfg. Co.  
J. T. Powell, New Britain, Conn.; Stanley Rule & Level Co.  
Daniel K. Stucki, Buffalo, N. Y.; D. K. Stucki.  
F. S. Seeley, New York; Weibusch & Hilger, Ltd.  
Jas. J. Mandlebaum, Little Rock, Ark.; Fones Bros. Hardware Co.  
Mrs. Jas. J. Mandlebaum, Little Rock, Ark.  
Joseph Orgill, Memphis, Tenn.; Orgill Bros. & Co.  
G. H. Lyon, Little Rock, Ark.; W. W. Dickinson Hardware Co.  
L. W. New, Philadelphia; E. K. Tryon, Jr., & Co.  
Leo Fox, Pine Bluff, Ark.; Fox Bros.  
W. R. Patterson, Natchez, Miss.; Baker & McDowell Hardware Co.  
R. P. Boyd, Knoxville, Tenn.; Jno. H. Graham & Co.  
J. B. Curtis, Fitchburg, Mass.; Simonds Mfg. Co.  
J. M. Hottel, Philadelphia, Pa.; G. & H. Barnett Co.  
Wm. Taylor, Louisville, Ky.; American Steel & Wire Co.  
A. B. Howell, New York; Sargent & Co.  
E. E. Paine, Louisville, Ky.; B. F. Avery & Sons.  
J. R. Fones, Little Rock, Ark.; Fones Bros. Hardware Co.  
Geo. L. Knight, Nashville, Tenn.; Tubular Rivet & Stud Co.  
Mrs. Geo. L. Knight, Nashville, Tenn.  
H. G. Reinicker, Baltimore, Md.; Woolworth & Cowles Co.  
Geo. E. Eddy, Baltimore, Md.; Norwalk Lock Co.  
Brown Buford, Nashville, Tenn.; H. G. Lipscomb & Co.  
Fred. I. Johnson, Fitchburg, Mass.; Iver Johnson Arms & Cycle Co.  
Thomas Ellis, New York; Iver Johnson Arms & Cycle Co.  
E. M. Converse, Geneva, O.; Geneva Tool Co.  
Mrs. E. M. Converse, Geneva, O.  
J. B. Parent, Nashville, Tenn.; The Yale & Towne Mfg. Co.  
F. Lohoff, Evansville, Ind.; Evansville Tool Works.  
Mrs. Lohoff, Evansville, Ind.

## SOUVENIRS.

Among the many souvenirs distributed were the following:  
E. C. Atkins & Co., Indianapolis. A fine butcher's saw. Sixteen-inch blade, nickel-plated back and carved handle.  
Oneida Community, Kenwood, N. Y. Pan American souvenir spoon, gold plated bowl, very prettily engraved.  
New Jersey Wire Cloth Co., Trenton, N. J. Paper weight of heavy wire cloth with nickel-plated frame.  
Standard Chain Co., Pittsburgh. Match safe.  
Peters Cartridge Co., Cincinnati. Stick pin, made of 22-cal. short cartridge.  
Charter Oak Stove and Range Co., St. Louis. Greeting to Association on heavy dark paper with gilt model (flat) of stove attached.  
Fairbanks Co., Baltimore. Thermometer for desk.  
Atlas Shear Co., Bridgeport, Conn. Pocket scissors.  
Page Belting Co., Concord, N. H. Pocket bill book.  
Iowa Farming Tool Co., Fort Madison, Iowa. Memorandum book.  
Cleveland Twist Drill Co., Cleveland, O. Watch charm made of small drill triple-plated gold.  
Hay-Budden Co., Brooklyn, N. Y. Anvil paper-weight.  
A. Leschen & Sons Rope Co., St. Louis, Mo. Pencils, pen holders and blotters.  
Hamilton Rubber Co., Trenton, N. J. Pocket book.  
Peters Cartridge Co., Cincinnati, O. Pocket eraser made of 30-30 cal. cartridge, nickel-plated.  
The souvenir end of the Convention was well attended to, and of more than the usual importance, resulting in a wide distribution of these representative favors. They serve to make the recipient more than ever impressed with kind remembrances of "those happy days."

## THE SMOKER.

Wednesday evening the delegates and guests were tendered a smoker by Landlord McKissick. Nearly every one was present in the large dining-room and enjoyed fragrant Havana and liquid refreshments. The host distributed souvenirs, consisting of a leather pouch of tobacco and a genuine North Carolina cob pipe.  
Mr. McKissick presented President Moore with a very unique pipe, made of rhododendron root, beautifully carved. Music was furnished by an orchestra and a colored quartette, who rendered a number of "rag time" selections and gave exhibitions of clog dancing.  
Everybody had a good time and voted Mr. McKissick a "jolly good fellow" in a dozen different ways.

## The Executive Committee Dined.

On the 23d ult. the Executive Committee of the National Hardware Association, which was in session at Atlantic City, was tendered a dinner by Samuel Disston, of Henry Disston & Sons, Philadelphia. The sessions of the committee were held in the annex of the Hotel Brighton.

The dinner was given at the Hotel Roman, the following members of the Executive Committee being present: John Bingley, president; Richard W. Shapleigh, first vice-president; Brace Hayden, second vice-president; T. James Fernley, secretary-treasurer; Samuel A. Bigelow, W. R. Belknap, R. A. Kirk, P. E. Strauss, John A. Koch, J. D. Moore and William W. Supplee. In addition to the officers of the Association, there were present Fayette R. Plumb and Harry C. Disston and George Koon, both the latter of Henry Disston & Sons, and who had entire charge of the details of the dinner.

Nearly all of the guests had been doing business with Henry Disston & Sons for a period of 30 to 40 years, Samuel Disston's connection with the concern dating back 52 years.

**THE BURR PATENT  
STEEL  
SAFETY LIFT BLOCK.**

A Perfect Self-Locking Rope Tackle Block.

USED AS A WIRE STRETCHER.

Runs as freely as an ordinary rope tackle block.  
Holds more securely than a chain block.  
Locks instantly and does not cut the rope.  
Allows the load to be lowered safely and slowly,  
the operator using only one hand.  
Cannot stick nor jam when the load is to be lowered.

Adopted by the Penna. R. R. Co., Western Union  
Tel. Co., War Department, U. S. A., and many others.

Read what the best known practical farmer in  
America says:

SPRINGFIELD, O., Sept. 21, 1899.

THE BURR MFG. CO., Cleveland, O.

Gentlemen:—The No. 4 Burr Steel Safety Lift received from you has been found very useful on our farm. We needed a stretcher very badly to put up some wire fence. Your Safety Lift Block was brought into use and we found it the most complete stretcher ever used in erecting fences. The No. 6 for 3/4 inch rope, just received, was brought into service at once in removing our wagon-beds, and hay-ladders—either taking them off or putting them on, one man can readily and safely do the work, as no matter where one wants to stop, the lock can be relied upon to hold every inch of lift made.

We, so far, are very much pleased with the working of it. It is a wonderful invention. Your Safety Lift Block is certainly almost indispensable on the farm, especially when the prices are so reasonable. I would cheerfully recommend it to any farmer as a time and money saver on the farm. You are at liberty to use this in any way that you wish.

Yours truly,

R. L. HOLMAN,  
Business Manager Ohio State Grange.

## NEW RIVAL

BLACK POWDER LOADED SHELLS  
Blue in Color Gas Tight Base  
PATENT CORRUGATED HEAD

**W**E are now prepared to furnish the trade with Winchester New Rival loaded black powder shells, *blue in color* made with our improved, solid, gas-tight, fire-proof base, and with the Winchester patent corrugated head, which has made our Leader and Repeater smokeless powder shells such ready sellers. These features not only give the New Rival shells loaded by us strength to withstand reloading, but improve their shooting qualities, making them the best selling black powder shells upon the market. They carry the same list-prices and discounts as the New Rival shells heretofore loaded by us, also the same Winchester load numbers.

New Rival shells, green in color, without the corrugated head, and branded “1901 New Rival,” will hereafter be sold empty only to the trade, for their legitimate requirements.

Our factory loaded New Rival shells, loaded by exact machinery and with the standard brands of powder, shot and wadding, can be furnished in all gauges from 10 to 20.

We are putting this advertisement in the leading popular magazines to help you sell them.

## Something New

PUT THIS ON YOUR PIPE,

The  
Fowler  
Automatic  
Draft  
Regulator

and you will notice the following about your furnace, stove, or boiler:

Regular Draft at all times.  
No overheating of furnace.  
Less chimney fire danger.  
No burning out of grates.  
No escaping gases in cellar or room.  
Perfect ventilation.  
Retention of heat in furnace.  
Perfect combustion of fuel.  
Minimum of clinkers.  
Therefore, greatest economy of fuel and care in operation.

Prevention of fires burning out on windy nights.  
A great coal and trouble saver.

Why? Because "The Fowler" Automatic Draft Regulator insures absolute and perfect regulation of draft under all conditions in any heating apparatus on which it is put.

Can be quickly applied even when heater is in use.

All stove dealers have them.

Send your address and that of your stove dealer on a postal. We are sure the reading matter we send you will be interesting.

## A FEW GOOD THINGS

From our extensive line of  
Hardware and Woodenware Specialties.

### METALLIC POKES.

500,000 now in use.

Adjustable, always in proper place.  
Not affected by weather, and does not  
wear the mane or make the neck sore.

We make a complete line of POKES,  
including *Ely's Dandy* No's 1, 2 and  
3—wooden pokes. Our prices will  
interest you. We save lumberman's  
profits by buying our timber on the  
stump, and sawing it from the log in  
our own mills.

### PERFECT CARRIAGE TOP DRESSING

Softens the articles it is  
applied to. Will not crack  
or peel off.  
Actual tests prove this  
dressing as good a finish at

one coat as the majority of others at two coats.

### ELY'S DANDY HAY KNIFE

Has been on the market for years and is  
still in the lead.

Made of malleable iron with best steel  
section knives.

Our price is a surprise to every one—ask  
about it.

ABSOLUTE SAFETY in handling  
vicious cattle and horses.

The picture tells the story.

We are the largest manu-  
facturers of cross-cut saw  
handles in the country.

## HARDWARE DEALERS' RECORD.

Hardware dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

### Incorporations, New Stores, etc.

Aberdeen, S. D.—Aberdeen Hardware Co. has been incorporated with a capital of \$25,000. Incorporators, John J. McCaughey, Elmer O. Miller and Frank Miller.

Burlington, Ia.—The Hardware firm of C. F. Schmidt & Co., has been incorporated for twenty years with capital stock of \$100,000.

Colfax, Ia.—W. S. Cutter Hardware Co. has filed articles of incorporation. Capital stock, \$10,000.

Crafton, Pa.—Thomas Silk is making arrangements to open a Hardware store in his new building at the corner of White and Noble Avenues.

Fairfield, Me.—Allen Totman Co. has been incorporated to carry on a Hardware and general merchandise business, \$10,000 capital stock. President, Frank M. Totman, Fairfield; treasurer, Everett Totman, Fairfield.

Findlay, O.—Conrad Gassman will open a Hardware store in a few months in the room with Gunderman & Beall, the bicycle men, on South Main Street.

Greenland, Mich.—Harvey Chown.

Hatboro, Pa.—Butterworth & Fretz have opened a Hardware store in the Fennimore Building on York Street.

Montrose, Colo.—A Hardware establishment with a \$10,000 stock, has been opened for business in Montrose by E. H. Garret.

Nunda, N. Y.—Grimes & Walker have opened a new Hardware and grocery store in the Union Block.

New York, N. Y.—T. R. De Lacey Co. has been incorporated to deal in Hardware; capital, \$2,000. Directors: Henry O'Neill, R. B. Caldwell, and T. R. De Lacey, New York City.

Smithfield, N. C.—The Holt Hardware and Buggy Co. has been incorporated by the Secretary of State. Its capital stock is \$10,000 to \$20,000, and E. J. Holt, H. D. Ellington, T. R. Crocker and S. S. Holt are the incorporators. The business proposed is the conducting of a general store, but more particularly the buying and selling of Hardware and the manufacture and repair of vehicles and machines.

Vicksburg, Miss.—The Vicksburg Hardware Co. has been incorporated; capital stock, \$10,000. Incorporators: C. C. Christal, C. J. Rollman and P. A. Christal.

Wheeling, W. Va.—Thomas Morris, East Sixteenth Street.

### Changes and Improvements.

Amherst, N. S.—Douglas & Co., Hardware merchants, have formed a new partnership, consisting of W. Wood, J. H. Douglas and H. M. Stevens.

Bay City, Mich.—The Jennison Hardware Co. has increased its capital stock from \$40,000 to \$100,000.

Bridgton, Me.—George Frisbee has become the partner of John H. Roes in the Hardware business.

Baldwinville, Mass.—H. H. Hammond, of Baldwinville, is putting in the foundation for an addition to his Hardware store to accommodate his increasing trade. It will be 45x18 feet and one story in height.

Birmingham, Ala.—The Milner & Kettig Hardware Co. have moved from their old building into the new.

Cooperstown, N. Y.—The Hardware firm of H. M. Hooker & Co. has been dissolved by mutual consent. H. M. Hooker has sold his interest in the stock to D. J. McGown, the junior partner, the title to the real estate remaining as at present.

Deadwood, S. D.—A. F. Bick, of Omaha, has purchased and taken possession of the Hardware business of E. T. Baltzley.

Elizabeth City, N. C.—Sharber & White are removing to their new store on Main Street.

East Liverpool, O.—The Diamond Hardware Co. is now under a new management, J. N. Shives having disposed of his interests to M. L. Otterman, of Youngstown, O., and Henry Fowler, of Warren, O.

Gilboa, N. Y.—George Shaler has sold his entire stock of Hardware goods to Frank R. Thomas, and will discontinue the business.

Guthrie, Okla.—E. A. Neher has purchased E. R. Peterson's interest in the popular Hardware company of Henricks & Peterson. The firm name will be known as Henricks & Neher, Mr. Peterson retiring from active business for the present.

Holland, N. Y.—W. J. Tabor is enlarging his Hardware store on Main Street.

Jamestown, N. D.—R. L. Scott & Co., of St. Paul, have bought the Gieseler & Blewett Hardware store in this city.

Kansas City, Mo.—The Richards & Conover Hardware Co. has purchased the property at Fifth and Wyandotte Streets, once occupied by the Lindell hotel. Foundations, built years ago by persons who proposed to erect a big hotel there, are yet on the property, and will be used by the company for a large wholesale house it will construct within a year. The company also purchased recently a lot, 77x160 feet, on Fourth Street, adjoining its warehouse on the East. The firm now has in process of construction on Fifth Street a four-story brick warehouse with 28-foot foundations.

Muskegon, Mich.—Karel & Dekker, Hardware merchants, will build a two-story brick block on Pine Street.

Manchester, Va.—The B. P. Vaden Hardware Co. has in the course of erection a handsome brick storehouse at Fifteenth and Hull Streets, which is to be occupied by them as soon as completed.

New Cumberland, Pa.—D. Y. Lenhart will move the stock of Hardware bought of E. P. Conley to his room formerly enlarged where his stove and tinware store is, on Market Street.

Newport, Vt.—L. A. Spaulding has taken a half interest in the Hardware business with F. W. Carr.

North Vassalboro, Me.—George S. Hawes is preparing to erect a building 16x26, for a storage depot for his Hardware.

Osborne, Kan.—Roy Hewett, of Cawker, has taken possession of the Buchner Hardware store, having purchased same.

Pine Island, Minn.—W. D. Marvin is constructing another building adjoining the first. It will be finished about the middle of May, and when completed, it will, together with the original structure, have an even 100-foot frontage on Main Street. The entire building will be used for Hardware purposes.

Piqua, O.—D. N. Burr & Co. have decided to erect an addition to their Hardware store on Main Street.

Paris, Tex.—H. S. Bettes Hardware Co. has amended its charter by increasing capital stock from \$50,000 to \$125,000.

Presque Isle, Me.—The partnership which has existed between A. M. Smith and E. W. Fernald, Hardware dealers, has been dissolved by mutual consent, and the business will be carried on by Mr. Smith, Mr. Fernald retiring.

Revere, Mo.—L. M. Dawson has sold his Hardware store to C. Lucas, but reserved half interest in the implement department.

Salem, S. D.—Ellis Bros. have sold their Hardware store and stock to J. W. Ryan, of Canistota.

Struthers, O.—Charles Fitch has begun the work necessary for the removal of his Hardware store to the adjoining lot on the south of his present location.

Dpt. O.  
CINCINNATI, O.

1214 & 1216 Market St.  
PHILADELPHIA, PA., March 12, 1900.

GENTLEMEN:—The continued use of the Miller step ladders in our Decorating Department and the reports of many of our wholesale customers who have purchased them from us, prompts us to state that they are thoroughly satisfactory and all that you, as manufacturers, claim for them.

Very truly yours,

KAYSER & ALLMAN.

For Catalogue and Description, Write to

**MILLER LADDER CO.**  
204 Orleans St., Chicago, Ill.

The "Miller" is a radical departure from the conventional style of step ladder. It has an individuality entirely its own which has won for it recognition as the standard ladder in the decorating trades.

## HARDWARE MANUFACTURERS' RECORD.

Hardware manufacturers over the country, are requested to contribute to this page. News of new factories or companies, changes, improvements, etc., will be gladly received, and promptly published.

### New Incorporations, Etc.

Alton, Ill.—The Beall Shovel Co. has just been incorporated with a capital stock of \$50,000. The incorporators are Edmund Beall, Charles Beall, J. Wesley Beall and Chas. L. Beall. Almost all of the machinery for the manufacture of the shovels has been installed, and work will commence within a very short time.

Ashland, O.—A new company to manufacture the Hixon Adjustable Sieve has started up in the Guth Cold Storage Building on West Main Street and will manufacture a sieve different from the one formerly made by Mr. Hixon when he was connected with the old Hixon Adjustable Sieve Co.

Baltimore, Md.—The Maryland Can and Mfg. Co., for manufacturing all kinds of tinware, has been incorporated by August Hellwig, Richard H. Dashiell, Andrew J. Burns, Wm. H. H. Stevenson, Simon L. Le Cron, Robert Lee Jones and John Thomas Scheu. The capital stock is \$15,000.

Brooklyn, N. Y.—The O. K. Tool Holder Co. has been incorporated with the Secretary of State, with a capital of \$50,000. The directors for the first year are Thomas F. Nevins, Frank J. Nevins and George W. Conklin, of Brooklyn.

Columbus, O.—The Colonial Gas Burner Co., capital stock, \$15,000, has been incorporated by A. B. Coit, H. L. Town, C. W. Plekharp, W. D. Heyl and Frank J. Town. It will manufacture gas burners, arc lights, etc.

Elizabeth, N. J.—Articles of incorporation have been filed in the office of the county clerk by the Braunsdorf & Mueller Co., the incorporators of which are Henry R. Braunsdorf, Chas. F. Mueller and Frederick Clauss, all of Elizabeth. The objects of the company are the manufacture of all kinds of mechanics' and other tools. The total authorized capital stock is \$100,000.

Ilion, N. Y.—The Tucker File Co., of Ilion, has been incorporated with the Secretary of State with a capital stock of \$50,000. The directors for the first year are Samuel T. Russell, Charles Harter and B. B. Ross. The company will occupy the large brick building on Main Street, formerly occupied by the Coleman Carriage Co. The product of the company will be letter files and cabinets.

Kansas City, Mo.—Articles of incorporation have been filed by the Kansas City Mfg. and Supply Co. The capital stock is \$10,000. J. C. Murphy, of Kansas City, Towner K. Webster, of Chicago, and Louis H. Webster, of Chicago, are the incorporators. The company is formed to carry on the business of manufacturing, buying and selling machinery and implements.

### Changes and Improvements.

Auburn, N. Y.—The business of the Ohio Tool Co. has increased so extensively during the past year that the firm has found it necessary to build an addition to its plant. The building will be 140 feet long by 40 feet wide. A new office will be fitted up in a portion of the structure. The old office will be used as a storeroom.

Alexandria, Ind.—The new plant of the Kelly Axe Mfg. Co. is now completed and operations have begun. The factory is built entirely of steel and brick, of the most modern fireproof construction, with a complete electrical plant for the transmission of power. The forge shops are constructed entirely of steel and the balance of the plant is built of brick and slow-burning material, and is heated and ventilated throughout with an improved warm-blast apparatus. The axe plant has a capacity of 9,800 axes for a working day of eight hours, which can be doubled on a sixteen-hour run. The scythe plant has a daily capacity of 24,000, and is arranged with sufficient machinery to double this output.

Canandaigua, N. Y.—The Lisk Anti-Rust Tinware Mfg. Co. has bought of W. H. Tuttle the lot and buildings formerly occupied by the Perry Spring Tooth Harrow Works. This property adjoins the Lisk works on the east, and its acquisition gives the latter 150 feet additional frontage on the railroad, and abundance of room for enlarging the plant whenever necessary.

Cleveland, O.—J. M. & L. A. Osborn, tin plate and tinware manufacturers, have leased for a number of years the building on the viaduct formerly occupied by the Cooperative Stove Co.

Detroit, Mich.—The Detroit Wire Fence Co. will remove its plant to Oshawa, Ont.

Daleville, Ind.—Work has commenced on the addition to the Ideal stove foundry. A building 140 feet long and 52 feet wide will be put up to furnish space for 25 additional molders.

Grand Rapids, Mich.—The Michigan Hardware Mfg. Co., which has recently filed articles of association at Lansing, is a new company, but its business has been established for many years. The officers of the company are as follows: President, Lars H. Solosth; vice-president, Frank H. Mathison; secretary and treasurer, Andrew Allgier. There are also other well known citizens interested in the said company. The new company absorbs the Grand Rapids Specialty Co.

Janesville, Wis.—The John Pritzlaff Hardware Co. of Milwaukee, will establish a large factory in this city for the manufacture of barb wire, woven fence wire, nails and staples. The factory will be located on North River Street. Improved wire machinery, made by M. D. Taylor, of this city, will be installed.

Indianapolis, Ind.—The Wagner Plow Co., the works of which are to be moved here from Vernon, Ind., has decided to pur-

chase five acres of ground situated near Churchman Avenue and the Belt road, for its factory site. The plans for the buildings are almost complete, and ground will be broken within ten days. About six buildings will be erected.

### Recent Fires.

Grand Rapids, Mich.—The window screen and ladder factory of Karreman Brothers, 155 Sigsbee Street, has been totally destroyed by fire. The total loss upon stock and building amounts to \$3,000.

Memphis, Tenn.—The plant of the Gardner Stove Co., at Marvell, Ark., has been entirely destroyed by fire, entailing a loss of \$25,000.

Oakland, Me.—Fire broke out in the Columbus Marshall Shovel Handle Factory recently and did \$2,500 damage.

Philadelphia, Pa.—The auger bit works of Job T. Pugh have been partially destroyed by fire. The entire fourth floor of the new factory building was burned out and the machinery and stock on the lower floors damaged by water. The cause of the fire is unknown, but it is supposed that the building was struck by lightning. The loss is estimated at \$30,000, fully insured.

St. Louis, Mo.—The three-story building at 802 and 806 North Main Street, occupied by the Ferris Stove and Mfg. Co., has been almost completely destroyed by fire.

St. Paul, Minn.—Fire in the frame building, 399 Goodrich Avenue, occupied by Christian & Jones, manufacturers of gasoline stoves, did damage to the extent of \$1,000; fully covered by insurance.

Winsted, Conn.—The plant of the Rogers Rake Mfg. Co., in Pleasant Valley, Hampstead, has been burned. The loss, \$10,000, is partly covered by insurance.

### Embarrassments.

Chattanooga, Tenn.—The stockholders of the Chattanooga Plow Co. held their annual meeting and election of officers recently. The election resulted in the choice of the following: President and treasurer, C. D. Mitchell; vice-president, G. W. Wheland; secretary, Howard Mitchell. The following board of directors was chosen: Newell Sanders, G. W. Wheland, C. C. Bloomfield, Howard Mitchell and C. D. Mitchell.

## Polygon Conductor Pipes Won't Burst.

The twist in the corrugation checks the sudden fall of ice and water, thus protecting the joints. It stands hard knocks because it is corrugated. Again, it is much handsomer than plain pipe. Made in copper and galvanized iron.

## PRICES CURRENT.

The prices noted in this Prices Current are intended for the Hardware trade only, and for such quantities as are usually purchased by retail dealers. They are carefully revised and represent quotations at which purchases can be made. Very small quantities, and broken packages, frequently make higher prices necessary.

Subscribers are requested to notify us of any discrepancies, as we desire to make this department of our paper worthy of their constant attention.

The list prices, from which discounts are given, will always be furnished the dealer upon request, by the manufacturer quoted.
